: and works with almost all software. You can search for it in archie
: using DJ3.0 as a search pattern I believe. If you get really desperate
: and can't find it, mail me. I will point you to a site.

O.K.,
I *GOT* the file at last,
CONVERTED it from atari to mac (luckily I got StuffIt),
INSTALLED it in the system folder (system 6.0.5) and...

it doesn't work!!

Just what do I do wrong? Is it the mac doesn't like me?
The mac starts printing, print... print... and is ready
and I got no pages of output. My print data went to nirvana.

Shall I sell it and forget the whole thing?

Dirk, very tired... :-(((

In November, the Kitchener-Waterloo Eight Sixteen Thirty-two (KWEST)
Atari user group will have a general meeting with the spotlight on
the Falcon.

Our 16-bit library currently has over 400 disks of public domain
and shareware software.
In addition, there will be our updated catalog disk and our
disk-of-the-month.
Our 8-bit library is also available at this meeting.

As well as our own newsletter "The Hard Copy", we will also give
attendees the October issue of AtariUser.

The group welcomes new members and visitors with
8-bits, 16-bits, or those just curious.

Meetings held at the University of Waterloo in the
Math & Computer Building.

Room opens at 7:00 pm. Meeting starts at 7:30 pm.

Wednesday, November 10, 1993
DCS Course Room, Room 2009 (2nd floor)

Call 725-2068 for more information.

Hope to see you there,
Dani Roloson

Date: 1993-11-09 22:51:09 UTC
From: glennd@pioneer.arc.nasa.gov
Message-ID: <1993Nov9.225109.2815@news.arc.nasa.gov>
Source record: 198754

Has Geneva been tested with Cubase 3.0x? Does it work OK? Ideally, I'd like to run Cubase and X-oR, without putting either to sleep, so I can audition patches with X-oR while my Cubase sequence is running.

Also, given the revised (February) anticipated release date of Neodesk 4, is there any chance of getting Geneva now, and getting a "coupon" for Neodesk 4, such that the total is $100 (US) (the cost for the package deal)?

My friend is selling his STE system for a Falcon...

Atari 1040STE
- 4 meg RAM
- AdSpeed STE 16 MHz accelerator
- Mouse, box, original manuals
- Near perfect condition
- $250 or best offer

Atari Hard Drive Setup
- Generic shoebox case & power supply (holds two 5.25" drives)
- Seagate ST-296N SCSI hard drive (less than 2 years old)
- ICD Advantage Plus Host Adapter w/clock
- Original disk and manual
- $150 or best offer

Epson Action Printer 3250
- 24-pin
- 120 cps draft
- 30 cps LQ
- A few years old, but still works well (he has a DeskJet now)
- $90 or best offer

Syquest 44 meg cartridge
- New, never used (bought cartridge, but bought a Syquest 105 instead)
- $40

Prices do not include shipping.

Please send Email to t.magee1@genie.geis.com, or for best results, call
him directly at 402-733-2848, ask for Todd.

To create logon macros in STorm, look through the files that end in .BAS. You'll have to load them into the interpretter either through the Load menu or by typing load and the filename at the ready prompt. Use List or the editor to view the text. You can also try HELP HELP at the Ready prompt and then HELP <topic> after that.

I don't like STorm for a few reasons. First, there are less options than the original Flash. Second, VT100 has some really bad bugs and there is no direct VT52 support, although you can force the system into using it.

The basic communications facilities just weren't worked on as well as the script language. I mean, its a full-fledged BASIC interpretter that doesn't eat alot of memory. The Basic is very nice, I just can't do enough VT100 to talk to the mainframe and can't dial the local ATARI BBSs without a hassle. The font is also proprietary and after FZDS and Calligrapher I'm tired of proprietary fonts. Programmers should NEVER bypass the OS. When hardware changes will STorm by updated constantly for every weird graphic card and such? Wouldn't it be best to use GDOS and then have access to Speedo and NVDI and ... and I'm rambling. I'm still using my little TOSWIN dumb-terminal. Connect is too expensive, but nice,

.

Is there a compiled version of MinTLIB 35 or higher? I only have source and most of the stuff compiled, I want everything pre-compiled.

What's a good (and SMALL) version of MicroEmacs to get? Is there anything friendlier that I might want to try?

Can someone tell me about Curses? I mean specifically how to use them with TERMCAP strings and such so I can write software that can use any terminal type?

Is there a termcap based window library?

Does anyone know how to make a persistent C++ object where the functions are also saved on disk, AND the object can be re-read by other programs which do not specfically understand that object (weren't compiled with that functions header). Is this similar to dynamic linking?

Does anyone have a GEM recorder that can be comtrolled by both the user AND an application (through events or messages of some sort). Would anyone want one for either macro building or program demos?

My G++ library didn't have the delete function in it (the compiled form of delete.cc). Where can I get one that works? I've patched everything up and it seems to be working, but I don't know what else might break, so i'd like to get a working copy (patchlevel 20 or greater).

Does anyone have/use Objective C?

Does anyone have a list of the functions/objects available in G++ library and how to use them? My C++ manual doesn't go into much about iostreams and standard functions other than how to do the basics and how to overload your own functions and put your objects into the iostream. It gets into the programming and philosophy and how-to's and assumes that the compiler has a manual (bad assumption).

Where are the GCC/G++ manuals? I want ASCII, how do I get it? Or, if ASCII is not available, how much hard disk space do I have to waste in other programs just to read some docs?

Who is getting tired of all these stupid ass questions??
Thanks,
Evan Langlois

I noticed this as well. This is a bummer, as HSMODEM1 appears to allow
significantly faster Zmodem operation than serfix2.

BTW, can some kind bilingual soul translate the HSMODEM1 doc file into
English? From what I can tell, one can set several options using a config
file. I am interested in increasing buffers to see if I can get even faster
Zmodem downloads. Ger2eng produces some rather humorous results on this
file :-).

Pretty pathetic: 15,000 sold in two years. Heck, Apple shipped about that many
AV macs in one day. Come to think of it, there are more Newtons out there
than there are Falcons. The same fate will happen to the Jaguar due to Atari's
inept. Sports fans, it's time to move on.

prices
EK> dip soon. --
Well In the UK we saw a price drop of 100UKP about 6-8 week's ago and

another further 100 has just been lopped of the price ,together with
some
additional HD space .Currently a 4M/OHD version is available at
699UKP
(sorry you'll have to do youre own currency conversion's on this :-)
)
The 1M version is now available at not much more than I paid for my
STFM
about 5 year's ago !!!

Well, I hate to be a party pooper. I hate even more to glorify what that Sinclair-Day person has been spouting. However, Atari cannot compete with the new Apple pricing or the new PC clone pricing. They would be fools to stay in a game that they cannot win.

At this point, I would say that all of the marbles are riding on the success of the jaguar. The falcon is stillborn. Apple is selling 68040 boxes cheaper than falcons now.

Cheers,

Chris

Uh oh. You forgot to mention that that is the price that people
outside of universities will pay. He will probably whip back with a
student discount price.

That said, the new basic color monitors are basically just SVGAs with
an adapter on the end so you _could_ conceivably buy a cheap 14" and get the
adapter plug. Looking at the monitor control panel on a Centris the other
day I noticed an option to switch between VGA and SVGA.

>sinclap2954> Oh by the way, another Mac was introed yesterday. It's
>sinclap2954> called Mac TV. An integrated 14 inch color with TV
>sinclap2954> tuner, Cdrom, ports to hook upto VCR, camcorder ect.
>
>ya? and?

..and not much. Having looked at the product info sheet on it, I'm
not all that impressed. I guess it is a good deal for 1st year students and
maybe the same target crowd that the performas were aimed at (basically the
mostly -computer-illiterate masses), but not for much else. The big
dissappointment is that there is NO connection between TV and Computer
operations: No ITV, No video/sound capture, No picture in a window. It is
even worse than those VCR/TV combos because both functions cannot be on at
the same time. (however it does have that remote..wonder if you can program
it to auto-login by hitting the computer button...even turn on from the "off"
mode? dunno...). Basically it is an expensive TV that HEY LOOK comes with a
computer free (hah, nuttin's free).

The version on ftp.uni-kl.de ONLY works on RGB if you don't start it in
Compatibility-Modes. Switch to a screen mode like 640x480x16 and start it.
(Hm... well the game is nice but this monitor problem...)

Where can i get the hacked copy of this game?

Ciao, Heiko.

1547. Upgrading 520ST

Newsgroup: comp.sys.atari.st
Date: 1993-11-10 11:34:10 UTC
From: anthony@inyanga.cs.wits.ac.za
Message-ID: <37@inyanga.cs.wits.ac.za>
Source record: 198772

I have a 1/2 meg 520ST (1987 TOS (1.2))... Bought in 1989...
Now this model has the memory chips under the left side of the keyboard
and MUST be soldered... The existing (16) tiny square chips each need a
capacitor... Can someone please give me more complete info. on upgrading
this (MYSELF!!)... (are there any resistors to change... ???)etc ..
What are those chips called ????

1549. unZOOing Mutt

Newsgroup: comp.sys.atari.st
Date: 1993-11-10 12:14:55 UTC
From: lpzssm@unicorn.nott.ac.uk
Message-ID: <2bqlvv$nu6@unicorn.ccc.nottingham.ac.uk>
Source record: 198773

I've been trying to unarchive the Mutt distribution (me2b_p17.zoo)
from atari archive and keep getting the following:

Z00: ERROR: Can't open mu_edit2/[filename] for output

for all files in the archive. If I create the sub-directories by hand they
are extracted, but this is laborious do do for all files.

It seems zoo isn't creating subdirectories for some reason, even with
the explicit -x// flag.

I'm using zoo 2.1 and haven't had trouble with this before either on
my ST or using Unix Zoo.

Any ideas anyone ?

Ta,

Sam

Hi!

Make sure your config.txt is correct. The enviroment-var PGPPATH should
point to the dir with the config file (and this dir should exists ;-)).

The next problem could be the Desktop. If you are entering options
in the dialog-box of the GEM-desktop all characters are converted to
uppercase. Use a shell (or Gemini) to start your ttp/tos prgs with
lowercase options.

Bye,
Wolfgang.

1554. Hacking a demo !!!

Newsgroup: comp.sys.atari.st
Date: 1993-11-10 13:11:22 UTC
From: c2sgy@dmu.ac.uk
Message-ID: <1993Nov10.131122.18485@dmu.ac.uk>
Source record: 198712

Is there a straight forward way of hacking a single screen from a demo ??
The screen in question is quite stunning. Its from E605 by -Light- and has
a overscan picture of the Earth with hardware scroll and many colours. It
deserves more than to be in a demo and I want it as a file!

The screen is ICE! packed and have found the location on the disk. But how
do I interpret the ICE! info to know how many bytes the file is AND how
do I grab that amount of bytes ...

Thanks in advance!

BTW: According to the adverts Frontier (aka Elite 2) will be coming out for
the ST. Even though I have an ST I'd rather see it for the Falcon with DSP
goodies on the vectors ....

Atari-ST RoundTable
Category 8, Topic 2
Message 104 Tue Nov 09, 1993
A.PAGE3 at 21:10 EST

I guess the simplest way to ensure that people have a 'hangup' key is to program the ALT-H key (as mentioned in a previous message) to toggle the DTR signal. Perhaps I should have placed more of these things in the STORMKEY.INI file I included with the package.
I will be uploading a patch file later tonight that will fix some of the bugs I have found. Other bugs are harder to track down. e.g. Zmodem. Some people have no problem, other's have a lot of problems.
It is easier to find a bug with fairly specific instructions. e.g. someone said 'I see alerts and it crashed after editing a Basic program'. It took a while to figure out that it had to be after loading a tokenizes, not Ascii, Basic program, and it had to have no labels and/or no variables.
Re: two bytes in saved capture file:
When you switch to the capture buffer, does it actually contain text?
What menu option do you pick? Save ? Save As...? Save As... on the Capture menu? Save ... on the Basic menu? Did the file already exist and you got the "Append,Overwrite,Cancel" alert? Please be very specific and detailed. Another question, can you load files into the capture buffer?

I will be working on the registered version about a day or two a week from now to January. I want to add improved editor features, true ANSI color graphics, and a way for Basic to run dialog boxes, at the very least. I hope to add a lot more. I will not be shipping the registered shareware version until January I expect, so if you want to wait until it's actually shipping, that's fine.
Regarding ESC 1, ESC 2, etc. Thank you for pointing that out. It is a mistake in the way I am handling control characters in the profile files. You need to edit the STORMKEY.INI file. For ESC 1, you will see a line Key="\331". Change it to Key="\0331". That should do the trick. The fix for that will not be included in tonight's patch, but should be ready for the next patch.
However, the patch file does contain information on setting up keyboard macros for insert, clr-home, etc, which should be useful for you. Eventually, I plan to add a feature to the VT100 which will let you run a Basic command or program when VT100 is enabled and possibly also when it gets a reset command. That will assist in customizing it for your purposes.
There is some confusion regarding dialing and serial/terminal setups. In the dial editor, you can double-click on a name then set the serial settings

for that number. The dialer should switch to that baud rate, etc before it dials the board. I will check that out to see if there is a problem. If you always use the same baud rate for your modem, there is no need to setup individual serial settings.
Zmodem appears to be erratic. Some people have no problems, others can't get it to work at all. If it doesn't work for you, try to explain how to reproduce the problem. If you find yourself getting hot and bothered, stop using the program and wait till things settle down. Go back to whatever you were using before. I am not shoving the program down your throat. I have also not played the 'guilt' card and put a time limit on using the current version after which people are supposed to feel like criminals for continuing to use it. I don't believe in that approach. If I don't come up with features for the registered shareware version that tempt you, you can either continue to use the non-registered version with a clear conscience, or drop the program entirely - no hard feelings.
How to call the file selector from Storm Basic:
x$ = FSEL$("","")
x$ is required because FSEL$ returns a string and Basic syntax requires that you have something to accept that return value. If you enter that line in a keyboard macro, it will call the file selector and do nothing else. Note x$ could be any Basic string variable.

How to add modem initialization strings for individual phone numbers:
In the dial directory editor, add the command at the start of the phone number, together with the dial command. e.g. &M0DT123-4567. Then, in the modem setup, change the dial prefix to "AT".

Well, I appreciate the comments. I am tracking down and fixing the bugs as I discover them. However, I still have to put in long hours for my regular job, so Storm gets worked on late at night and for one day a weekend.

Atari-ST RoundTable
Category 8, Topic 2
Message 108 Wed Nov 10, 1993
A.PAGE3 at 00:42 EST

Storm 1.00 has incorrect serial routines, which are only used if an ST has a version of TOS before 1.4. The serial fix program 2.0 by Bruce Penner has a special hook so I can use his serial routines directly on machines with TOS versions prior to 1.4. Therefore, regardless of whether you use CTS/RTS or not, Storm 1.00 will only work on TOS < 1.4 if you use Bruce's program. The CPX is irrelevant.
In case you are curious, I made a mistake in the assembly code and the MFP addresses were incorrect! The patch from 1.00 to 1.01 has been uploaded and will fix that problem.
I do not know why Zmodem is a problem for some people. I am putting debug code into the Zmodem so I can track down the problem. One possibility is that the serial buffer needs expanding. I do NOT do this in Storm because I believe it's the sort of thing that should be done by a TSR, especially in a multitasking situation. If Storm crashes with the serial buffer pointing into

its own memory, the whole system will get messed up.

I tried exactly this about a year ago. I bought the chips, capacitors, and resistors which were needed from a private individual, for 21UKP, and spent about a week fitting them,. When I had finished, the whole computer was dead. I had to take the machine for repair, which cost me 40UKP. After 3 months, I looked inside, and he had to change only one of the chips!

My advice to you is to get it done professionally unless you are completely competent with a soldering iron (as I thought I was). If you insist on doing it yourself, I have an article out of a very old ST User detailing the upgrade.

: What are those chips called ????

I believe the chips are called DRAM chips. You also need 16 BEAD capacitors, and about 3 resistors.

The 15,000 figure is just for the UK, which I expect is more sales than the
Newt. At about 500 quid each I know which choice I'll be making!

Some TGA picture files were uploaded somewhere of screen shots from some of the Jaguar games. With all this talk I have kinda got interested in getting one.

Any e-mails would be appreciated.

From: falcor@netcom.com
Message-ID: <falcorCGAC0p.2qI@netcom.com>
Source record: 198795

Update on my problems:
Ok, I got my 1.44meg floppy drive set to drive 0, and put it in the case.
The computer talks to the drive now... but, if I insert any of the disks I
have, the screen gets funny little lines all over, and then a random number
of little bombs appear. After this, the floppy sometimes shuts off, sometimes
not. I've checked supply voltages, and the PS for the drive is working OK.
Now, I get the same behavior from the original Chinnon 720k drive that was
in this enclosure. Do I have a blown floppy controller on the 520 motherboard?
Thanks,
-Howard J. Poe
P.S. Anyway know where I can get a WD1772-PH chip? That's the floppy
controller, I think.

Unfortunately, it is quite easy for him to get rid of all that
mail flood. Probably, he just deletes all messages which are
replies from this forum -- he has no reason at all to fear he
throws away something useful for him.

I think it's best to ignore him entirely. That is, unless you
want some fun messing with a bozo, like Scott Yelich did, or
unless you're Thomas Darling, who PLEASE PLEASE PLEASE should
induct him into his weenie hall of fame.

>released.

This is interesting.

In the US, Atari outnumbered other platforms for years, but has lost much of the market.

The Mac seems to be dominant now in *pro* applications, particularly since programs like Sound tools came on the market.

For amateurs, the PC clone business seems to be the leader. The programs are cheaper (the Band in a Box people just released a $29 sequencer with notation features!). The many sound boards have created a new breed of user, a music "hacker" who doesn't even use outboard MIDI instruments.

Mountain QWK wouldn't load them? What program was the board using
to form its packets? I was one of the beta testers for Mountain QWK
and I used it exclusively on IBM boards (no Atari based boards around
here that did it :-( ), and by release time we couldn't find a BBS
that it couldn't handle. I would appreciate knowing which version of
Mountain QWK it was as well as the QWK door programs that it wouldn't
handle, so I can let the author know.

Thanks,
Victor Bruhn

>trackball, or another one?

I own one of these myself and the fix is so easy you'll be amazed;

Go out and get some nice fine steel wool, wrap it around the "trackball"
iteslf, and make that nice gloss finish a nice matte finish. From then on it
will work fine. You don't need to rub it much, just until the gloss finish is
gone.

I also took mine and put it up on little rubber feet (from Radio Shack), so
that the platform of the trackball is the exact same height as the rear of my
Mega keyboard, then I sat it behind the rear of the keyboard on the right so
that when I use it my hand can rest on the back of the keyboard. This is far
more comfortable than having it elsewhere on the back.

Good luck!

1581. Accessing Atari FTP Sites (Help! Aid! Assistance!)

Newsgroup: comp.sys.atari.st
Date: 1993-11-10 20:53:02 UTC
From: rmgreen@edu.uwo.ca
Message-ID: <1993Nov10.205302.13353@julian.uwo.ca>
Source record: 198702

I have recently been made aware - largely through this group, in fact - of a handful of several Atari FTP in North America and Europe. Well and good.

Unfortunately, I am ignorant as to the specific responses needed at the "login" and "password" prompts on these sites, and a reasonable bit of trial-and-error has not as yet produced any results getting in.

Could some kind soul please provide me - by E-mail, unless you think this really needs a general posting in return - with the login and password prompts at these sites? If nothing else, the responses needed to enter atari.archive.umich.edu would be greatly appreciated.

Sigh...does it show that I'm still fairly new to FTP?

Thanks very much.

Source record: 198274

Our Local Support Person had a quite clever answer: of course we stopped production, we did that quite a while ago! Atari doesn't produce anything at all anymore: they order their stuff somewhere in the Far East as needed. So there will allways be lapses in production for any but the fastest selling machines.

You are forgiven ;-)

The filename is probably STORM100.LZH (or ZIP) and is probably
located at wuarchive in either mirrors/archive.umich.edu/atari/Newitems
or mirrors/archive.umich.edu/atari/Telecomm. On the normal
atari archive server, just nuke the "mirrors/archive.umich.edu/"
from the directory name...

I say "probably" above assuming the file's been validated etc...
(it is available on GEnie, however...)

Message-ID: <2brsi6$bue@vulcan.nrlssc.navy.mil>
Source record: 198631

I needed to hook up my old 5 1/4 " IB drive the other day
to move some files to and from a really old PC that only has
that type of floppy on it. The last time this thing was used
I had an ST and it worked fine. Now, it's being connected
to a TT and the step-rate program which came with the drive
(resm.prg or resm.ttp or somesuch) just bombs on the TT.

Is there a TT-friendly "step-rate setter" out there? I
could have sworn seeing one hiding in some other utility
(UIS?? One of the disk formatter programs??) but have
been unable to find it...

When people start to realise here in the U.S. that a Falcon and Cubase
Audio can do much if not all Soundtools and a Mac can do, but for about
a 1/3-1/2 the price sales MAY pick up. In any case it really depends on
the music you're talking about. In dance and alternative music the ST
still rains supreme (even if it just being used to run all the light
rigs for UB40..).

If you are talking mono Icons, the program you are looking for is
MAKEICON.PRG. It _is_ is a.a.u.e. because I downloaded it from there not
very long ago. You will have to find it yourself tho'. Also, the Icons can
he edited with any Resource Construction Set (eg. WERCS, K-Resource etc.)
The only/best PD R.C.S. is Otto's Resource Construction Set, which
can be found at most ftp sites under the name ORCS.*

For TT/falcon colour Icons, you either need INTERFACE, which is available
in the UK from HiSoft for about 50UKP, or Zoom (a cut down version of
Interface) which is available in Germany for about 70DM.

I need a math program to replace my Casio graphing calculator - it was stolen and I don't have the cash for another one, which makes $100 commercial wares out of the question.

Can someone recommend something? I would prefer one with an equation solver maybe one that finds roots/zeros, prints using GDOS, and does zooming of the equation. I found one such program but I can't figure it out because its all German (MESSPLOT.ZOO).

I cannot use those half-text half-GEM GFA BASIC programs. They either screw up NVDI or they screw up with MiNT or my TOS version or the particular cycle of the moon. I hate crap software.

Does anyone know if the GER2ENG translator program will translate the text out of a binary file (such as a resourcse - RSC - file?) without screwing it up? If it will mangle the file, why doesn't someone create something that will work on a RSC? After all, GER2ENG is poor because it can't handle grammar differences, but RSC files don't have grammar, and most of the words used in a RSC are pretty common, Button test, menu drop-downs, etc.

JUst translating DRUCKER to PRINTER won't help on a text document, but it will really do wonders on some ALERT boxes!!

Can anyone help me out?

1605. Which gcc for a TT?

Newsgroup: comp.sys.atari.st
Date: 1993-11-11 05:02:30 UTC
From: paul@jupiter.ame.arizona.edu
Message-ID: <1993Nov10.220231.4804@arizona.edu>
Source record: 198724

I've tried several versions of gcc on my TT (1.4, 2.1, 2.2...) but the only one that I've got to work is 1.4. Unfortunately, this doesn't run out of or use or make stuff that runs out of TT-RAM (as far as I can tell). The question is, what version should I use to do this, and how hard is it to get to work? Also, gcc seems to keep getting bigger with each new version, and I'm rather tight on disk space, so which version would work that is small(er)?

-thanks

>background, build in PopUp menus, color icons and so on.
>
>And what are the user's doing?
>
>Flame On
>
>Instead of using that powerful OS, they take other OS versions that lack
>all the new features of ATARI's official OS!

First of all, practically no application *requires* the new AES. Why?
Because the installed base is too small.

>Why should any programmer use the features, as the public obviously is
happy
>with the functions from 1985?
>
>And the reason for using the other oS versions?
>
>- It's faster - ok that's true - but is it so important? Isn't MTOS fast
enough
>on TT/Falcons?. Should ATARI really use an OS for the next years that
works
>fine on an 260ST instead of one that works good on an TT/Falcon?

The performance gain when using Mag!x is drastic. It's the difference
between VERY snappy and WORKS-BUT-IS-SOMEHAT-SLOW.

>- It allows bad programmed programs to work. So instead of changing the
>bad programs and using Gem-like programs one changes the OS. Very
sensible!

It's more compatible to TOS as MTOS. So what? For the user, it's
definively
a plus. You know, I'm the last one to defend bad programming practices.

>And the consequences are clear: Whatever ATARi implements to MTOS in the
>next years: No program will use it as the development in the ATARI

>community is stopped by incompatible OS versions like Magix and Geneva.

Don't blame the other OS's for that. The reason why programmers choose
no to use new OS features is just that MTOS is too slow on anything
below 030, and there are just not enough machines of that class out there.

In fact, fast multitaskers will *create* more cleanly programmed and
multitasking aware programs.

>Would you have used KAOS is it had not been fully TOS compatible?
>
>Shouldn't the few programmers that are left in the ATARI market program
>applications instead of different OS versions?

Perhaps, but only if Atari itself does more for MTOS.

Right now I see people who keep their machines because for the first time
they have a stable and fast multitasking environment, something you really
can't say about MTOS.

>I like using TeX a lot, I wouldn't benefit from cooperative
>multitasking a lot, would I?

Dunno about Geneva, but Mag!X *does* preemptive multitasking. Yes, it
runs normal TTP's in GEM windows. And yes, you can run TeX in the
background while having a GEM based editor and a DVI previewer in
the foreground. In fact, I've used this configuration (with qed as
editor and Ascreen as previewer) all the time when writing my thesis.

True, if the Falcon 040 has already been developed, then it will very likely be behind the times by the time it sees the light of day.

OTOH, if it has not been (fully) developed, it would be a long time in coming, given how much of Atari's resources have been going into the Jag.

Just to hammer it down: GNU emacs (18) runs on the atari, and it
really works. To get full power, you need both MiNT and a lot of RAM.
But in 4M, and on my humlbe 1040STe, I can run both GNU make and gcc
(though not with optimizing, and not on gigantic files), from within
emacs with M-x compile, using C-x ` to find errors (must be something
downloaded, I never make mistakes :-).

But to get back to the original subject:
Has anybody looked into getting emacs 19 up on the atari? We cant have
the X support, and it will be even bigger, but there are still
benefits.

Emacs 19 is even under autoconf, so porting should be much easier, but
I haven't got the disk space to look seriously into it myself.

>

I find his behaviour extremely strange. I mean, like him, I like recommending the Atari (Mac in his case) to people and go on about how nice my Falcon is. Unlike Mr. Sinclair I certainly *do not* join Amiga or PC newsgroups and annoy them with ST prices.

So please Mr. Sinclair, I'm sure you're an inteligent person with many interesting things to say. You seem knowledgeable enough (at least on Mac pricing;-) to be able to offer advice to many Mac users wishing to upgrade. If I ever want to buy a Mac I will mail you asking for advice, I promise. Are the Mac groups so quiet that you have nothing better to do than to join this one?

I like Mac computers, but I prefer the Falcon as it suits my needs perfectly, except perhaps for WP where there isn't a single application I'm truly happy with. I don't know if the situation is any better on the Mac, but I hear it is.

In the UK the Mac is virtually non-existent except in publishing. I know dozens of computer owners who use Amigas, PCs, only one with a Mac and it is very nice.

This is the LAST time I am resonding to your messages and I ask everyone else to do the same.

So be nice to your fellowman Sinclair. Peace man!

Source record: 198736

1) What's the address for the Heat&Serve mailing list?

2) Is anyone out there using the WINDDIAL library off this list? I'm trying to convert it for use with Lattice C, and it seems to be doing strange things. All GEM calls within it return errors, yet I know the AES & VDI have been initialised properly..

Anyone who can help, could they please E-mail me. I would be glad to distribute the lattice version of this code once I get it working..

TTFN

|> Diamond Back for the hard drive, but I use LZH/ZIP files for
|> spot-redundancy. I just want something that will compress a directory
|> into separate archived files.

What about gzip?

```
$ gzip --help
gzip 1.2.4 (18 Aug 93)
usage: gzip [-cdfhlLnNrtvV19] [-S suffix] [file ...]
-c --stdout write on standard output, keep original files unchanged
-d --decompress decompress
-f --force force overwrite of output file and compress links
-h --help give this help
-l --list list compressed file contents
-L --license display software license
-n --no-name do not save or restore the original name and time stamp
-N --name save or restore the original name and time stamp
-q --quiet suppress all warnings
-r --recursive operate recursively on directories
-S .suf --suffix .suf use suffix .suf on compressed files
-t --test test compressed file integrity
-v --verbose verbose mode
-V --version display version number
-1 --fast compress faster
-9 --best compress better
file... files to (de)compress. If none given, use standard input.
```

If compiled with the TOSFS option, it also takes care of the filename
limitations. Just say

```
$ gzip -r dir
```

and all files in dir will be compressed separately.

TITLE: Hacking a demo !!!

> The screen is ICE! packed and have found the location on the disk. But how
> do I interpret the ICE! info to know how many bytes the file is AND how
> do I grab that amount of bytes ...

You could make some nasty assumptions and do it this way,
1) Get a copy of Ice 2.40 from atari.aschive, where you will find the
source for decompressing ICE! packed files. The first few bytes after
the magic number will tell you it's length address etc.
2) When you have the length of the data, write a short program, or
use a tool like recover to read the sectors off of the disk
sequentially, saving them to a file. This makes the assumption that
the data lies sequentially on the disk, this is likely.
3) When you have the binary, you'll have to write a wrapper that
calls the ICE! unpacker on the data, and hopefully it will work.

There are numerous ptifalls though. The data may not be
sequentially on the disk, the code may only be run from a
certain area of memory (i.e. not relocatable), or it may use
some generic routines that are part of the demo, i.e.
keyboard handling, mouse etc. Your only resort then is to
go through the code from boot-up...fun!

I removed a couple of screens from Cor Blimey, but that was
by tracing through the code, the above method sounds okay,
but probably wont work!

I'm interested in setting up a BBS but I'm unsure of what system to buy.
Michtron is of no use as it does not seem to like my Falcon.

I have QBBS V1.10 and this seems pretty good,but the sysop on my local BBS,
Digital Impulse(who currently uses QBBS), is practically demanding I buy
the Ratsoft program which is,apparently,fully Falcon compatible.

Any ideas on which is best,QBBS or RATsoft, or does anyone know of any
other wonderfull BBS program?

Brian.

And which of these Apple boxes protects my investement in software? Which Apples run Cubase (see below), DA's Vektor, Pagestream, Calligrapher, Timeworks, Lattice C etc? Which Apple drives my Atari Laser? Although it is true that, with the exception of Cubase and arguably Vektor, the Mac has software better than the items listed (indeed, the ST has better products than some of those listed), they are the ones that I have invested money in, and would have to pay to replace.

(* Of course I know that the Mac runs Cubase, but I would still have to pay to `side-grade', as well as buy a MIDI interface).

The Falcon represents a reasonable upgrade for ST users. I am less convinced that it is a good choice for first time buyers, though.

I know several programs using Mag!X features. Most of them use features that
are also available with MultiTOS.

>> a) the system runs quite stable (Magix does so, MiNT doesn't)

>MiNT is stable too; otherwise, it wouldn't have been suitable for Atari
>to use as a kernel for MultiTOS.

MiNT may be stable, the AES is the weak point. BTW, Atari had no choice when
choosing MiNT. They weren't able to create a working system of their own.
They had lots of time (years) to develop their own multitasking system but
nothing happened.

>Very, very few real programs are incompatible with MiNT (some things
>built with GFA-BASIC have problems, like the uucico that comes with
>Hermes).

But unfortunately a lot of programs are incompatible with MultiTOS. Don't
compare Mag!X to MiNT, you have to compare it the MultiTOS, i.e. MiNT AND
the MultiTOS AES.

The high res emulation mode when using with an ST color monitor is awful...it's
interlaced and that wears on your eyes real fast. On a VGA, it's
non-interlaced and quite usable.

Yes, Geneva has been tested with Cubase and it is incompatible. Sorry, we
tried to get as high a level of compatibility as possible, but in some cases
it just isn't possible.

>Also, given the revised (February) anticipated release date of Neodesk 4, is
>there any chance of getting Geneva now, and getting a "coupon" for Neodesk 4,
>such that the total is $100 (US) (the cost for the package deal)?

We are currently offering the $99.95 bundle price for Geneva and NeoDesk 4.
We will ship the Geneva as soon as we can after the order is placed (usually
no more than a couple of days now), and the NeoDesk will be placed in back
order, and will ship as soon as they are ready.

The AES replacement that is part of MultiTOS is basically the same AES 4
which is in a Falcon. It is not a multitasking environment. MultiTOS depends
completely on MiNT to do multitasking.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

Can anyone out there tell me how to get dialog boxes in windows in Lattice C ?
I'm writing my final year project on my Falcon and desperately want to have a non-modal interface (ie the appearance of a dialog box doesnt lock up the program until the user dismisses it). To do this I need someway of handling multiple windowed dialog boxes... in the same way something like WinRec does for example.

I got hold of WindDial but have had no luck getting it to work, so has anyone managed to get it working with Lattice C ?

Any help _gratefully_ received!

Ian

I doubt whether you would get all the features. I use K-graph or
GRAPH.PRG(PD) for graph plotting, but I think that's all they do.

: Does anyone know if the GER2ENG translator program will translate the text
: out of a binary file (such as a resourcse - RSC - file?) without screwing
: it up? If it will mangle the file, why doesn't someone create something that
: will work on a RSC? After all, GER2ENG is poor because it can't handle
: grammar differences, but RSC files don't have grammar, and most of the words
: used in a RSC are pretty common, Button test, menu drop-downs, etc.

You can of course do it all manually, with a Resource File Editor (e.g.
ORCS, available on ftp everywhere). I have done this with several
programs, and its not too difficult when you have a Geramn Dictionary, and
a working knowledge of Computers.

BTW, does anyone know why GER2ENG does not actually work on my machine? I
had high hopes for it, but when I try to load a German ASCII text file
into it, it bombs out or something.

>Flame On
>
>Instead of using that powerful OS, they take other OS versions that lack
>all the new features of ATARI's official OS!

Geneva, for one, does has almost all of the features of Atari's OS. Currently the _ONLY_ unsupported features are ones which require MiNT (pipes, for instance, although Geneva's AES message passing is superior enough to generally handle this particular one), and features that Atari added just recently that we haven't had time to do. We will release a version of Geneva which is fully AES 5 compatible, and compatible with MiNT or PowerDOS.

>And the reason for using the other oS versions?
>
>-It's faster - ok that's true - but is it so important? Isn't MTOS fast enough
>on TT/Falcons?.

In our opinion, and apparently in the opinion of many of Atari's users, MTOS is NOT fast enough. And what about all those users who don't have TTs and Falcons? Are we wrong for giving them an AES with the same or better functionality? Geneva will work on _any_ Atari.

>- It allows bad programmed programs to work. So instead of changing the
>bad programs and using Gem-like programs one changes the OS. Very sensible!

Many of these "bad programs" are ones people use everyday for very serious work. Some (many?) are no longer supported or upgraded by the companies which wrote them.

>And the consequences are clear: Whatever ATARi implements to MTOS in the
>next years: No program will use it as the development in the ATARI
>community is stopped by incompatible OS versions like Magix and Geneva.

This is just plain false. Firstly, Geneva can not be labeled incompatible. It is more compatible than MTOS will ever be. Secondly, we will implement every feature Atari does in MultiTOS to remain compatible. Furthermore, our other programs, such as NeoDesk, will take advantage of the advanced capabilities of MultiTOS and Geneva.

> editing text Red is hard to beat for speed and features (when you move
> to multi-font graphical printing programs like That's Write 3,
> Calligrapher and Papyrus start to lap it though).
Well, I'm not doing anything strange - I'm following the manual to the
letter. I've hardly had chance to stretch the program, it's struggling
to do the most basic things. Apparently I did have a bad disk - a problem
the ST Club thought they had solved, but mine slipped through. I'm
waiting for a new set which should take care of the 'Hyphenation parameters'
bug. I'm very pleased your copy works well. Shame mine doesn't.
Graphics printing is a real chore, and I think this lets the program down
badly. Text entry is very fast and efficent and I love it, but that's not
much use if you can't get good quality output at the end of it. Red +
Timeworks 2 is proving a lot more successful at the moment (so I should
have brought Red Lite.)

> Before you start warning everyone on the net to avoid Red...
I've not done anything of the sort. I put up a message warning that I had found
some bugs in the program, that's all.

I've contacted the ST Club and they say that I can have a refund if I want one.
For the moment I'm sticking with Redacteur as it's clearly what I need. I'll
only pursue the refund if I keep finding bugs and can't cope with the work
arounds.

>documentation become available, libraries, etc? Please note these are
>genuine questions, not flames.

Absolutely. We are already planning upgrades to Geneva to fix any problems which have been found, and to eventually implement AES 5 features, and compatibility for MiNT. Geneva comes with full developer documentation, and C libraries for taking advantage of its new features. From what I understand, someone has already also developed GFA libraries for use with Geneva. The package also comes with a "debugging" version of Geneva which will report things like bad calls to the AES.

>and compatible to the official one? But it sounds as if for example
>Geneva gets its extra speed by not having MiNT installed. Now suppose
>I like using TeX a lot, I wouldn't benefit from cooperative
>multitasking a lot, would I?

It is true that there are some things you can do with preemptive multitasking that you can't do with Geneva, yet. As I mentioned, we will support MiNT in the future. (Probably as soon as we can after NeoDesk 4 is finished.)

However, it remains that many people don't need preemptive multitasking, or would prefer not to pay the price of the speed loss. Additionally, many TOS programs will run in a TOS window in Geneva, and allow you to switch out whenever they pause at a prompt.

I agree. I wish the font were smaller and the terminal window was
resizable... I'd like a 24x80 window that doesn't take up the whole
screen... Or even a 32x132 one!

And the font seems slow to me...

But I really like it! I think I may register it, even...

|> Is one more compatible than the other?

Yes, but the difference only affects interupt-timind and old and/or
hardware-dependant PRGs. e.g. Demos that need the VBL-interupt (on VGA monitor
it's always 60Hz TV-PAL 50Hz)
The other thing is that the Bandwidth use by the VIDEL is higher in VGA-mode
than in the corresponding TV/RGB mode.

Atari-ST RoundTable
Category 8, Topic 2
Message 118 Wed Nov 10, 1993
A.PAGE3 at 20:36 EST

S.RAMIREZ:
You will need SERIALFX 2.0 or the patch program that I just uploaded last night. (SERFX20.LZH #27506, forgot the number of the Storm patch!). Sorry for the inconvenience.
H.WOLFE1:
Got your check today. Thanks! You were #3. J.L. of Waterloo, Ont. was first, S.L. of White Rock, B.C. was second. No U.S. mail as yet, which is probably due to mail being slow to cross the border.
30,000 bytes is overkill. I don't use the program at all, but if I did, I would only use a thousand or so bytes.
I don't know how to communicate with Straight Fax. If the author has any information, or you or anyone can point me to a file with information, I would be more than pleased to look into it.
I don't have a definitive list of which versions of TOS contain what serial bugs. I have developer notes that way that the TT serial code had problems with the extra ports and a program called SERPTCH1.PRG fixed it. I have TOS 3.05, perhaps they fixed it in 3.06?? Try without and see.
Storm has the architecture to allow a different font for each window. It just lacks 1) user interface or Basic commands to set it, and 2) I didn't include the 8x8 and 8x16 fonts.
I actually use the IBM character set for characters above 127. You might notice that if you load a file containing line drawing characters into Storm, you can actually see the line drawing characters on screen. Do people really want the ST 8x16 font, or would they prefer the 8x16 font but retaining the line drawing and graphics characters from the IBM type font?
In any case, the registered shareware version will contain multiple fonts and the ability to set fonts for the capture, typeahead, and editor. The terminal fonts will always be setup through the terminal emulation modules. e.g. the VIDTEX lets you choose the 8x8 font if you are in ST meduim resolution.
The vast majority of modems let you use a comma for a two second pause. Some also accept '/' for a .125 second pause. Try putting a comma after the *70.
One of the longer term goals for Storm is to allow the running of dialog boxes from Basic and then hooking them into the program. So, for example,

you could set up your own dialog box or alert to be activated when a file is saved. I cannot promise that I will have all the details worked out for the first registered shareware release, but that is the direction I am working towards. That would avoid the problem of having a dozen options to satisfy everyone. People could then pick and choose their own.
An alternative would be a loadable module that would handle some interface chores. Harder for people to program, but easier for me to write.
I have no TT ram in my TT, but I see no reason why Storm should not use TT ram. Please try it and let me know.
VT100 has many ANSI features, but may not be completely compatible. That is something I will be looking in to. Please try it and report what happens. Be sure to log on with 8-bits, no parity and set "Mask High Bit" off in the serial settings.
GOTO label does exist in Storm Basic. You will see it used in some of the sample files. Also, ON x gosub label1,label2,label3, etc and the ON (expression) GOTO label1,label2, etc. work. All you need is a label, which is any word at the start of a line, followed by a colon character. naturally, you can't use a Basic keyword!
W.HALLMAN:
The ESC1 is a bug, which I have fixed in the patch and mentioned in a previous message how to get around. Your method will work as well, since it works around the bug.
I prefer money orders, but my bank is perfectly happy to cash U.S. checks - it just takes quite a few weeks for it to clear. And I am quite happy to recieve a check in any currency!
I think I have some clues about the file transfer problems. I added some debug code and the Zmodem started to act up as described in some messages. It may be related to using too much stack in supervisor mode and I will investigate to see what routine may be causing the problem, and how to solve it. Perhaps some versions of TOS, or hard disk drivers, or whatever, are using extra supervisor stack and the combination of that and Storm causes a disaster. That would explain why some people are having no problems, and others cannot get it to work at all.
I will continue to investigate on the weekend - too much work to do during the week.
- Alan

Just a few questions about Falcon software.
I am experianced with all Atari machines, apart from the Falcon.
Here's the Specs of mine.

4 meg, no HD, TOS 4.04, Err forgot MultiTOS version.

POV Raytracer.

I got POV from the ST Format coverdisk. Quite chuffed, I am, works a treat.

Now I've just got a Falcon. The little proggy provided to view .TGA(Targa)
files seems to display at 60Hz (FILENAME: view24b.ttp). My TV can'y handle it.

Are there any similar programs available via FTP that run at 50Hz.
I don't want any complicated conversion or multiple menu programs, just
something simple to display pictures from the desktop.

CPX's on FALCON

Its says in the manual for the Falcon, that in one of the CPX's you can
toggle the cache on and off. (I know you can do it with MultiTos)
Well my CPX has a blank space where the button is meant to be.
Where's it gone ?

MultiTOS

Back to the old manual, why can't I run accessories(.ACC) from the desktop ?

Cheers for you help,
Phil.

The difference is that on an RGB monitor you can only display 200 lines,
so to emulate ST High you have to use interlace. VGA monitors don't have
this problem. However they do require a higher video bandwidth which is
why some demos don't work. For 99% of serious applications a VGA is a
better choice.

1656. Got my Falcon, now the questions...

Newsgroup: comp.sys.atari.st
Date: 1993-11-11 16:01:45 UTC
From: elvis@watserv.ucr.edu
Message-ID: <2btnl9$dij@galaxy.ucr.edu>
Source record: 198623

Well, I finally broke down and got myself a Falcon, and was wondering if anyone has any advice on some problems I've noticed. The main problem seems to center around a conflict between JarXXX.prg and SpeedoGdos. I first noticed this when my archiver shell would bomb when I was running Geneva and NeoDesk, and I thought it was a conflict with one of them. Outline.app (for Speedo) was also having problems. Whenever I ran it, it would claim that no fonts were active or even unused (basically, no fonts at all), and would have lost its cache settings. The first time I thought it was just that the path was messed up, so I reset the path to c:\drivers (inside Outline.app), quit and restarted the program. Every time it resets itself to c:\, loses all the fonts and cache settings. I checked the extend.sys file, and all the settings are correct in there, but somehow outline isn't getting them.
I eventually discovered that if I ran just Speedo or just JarXXX.prg, everything was fine (unfortunately I can't test just Speedo and Geneva/NeoDesk) Actually, Speedo and JarXXX.prg seem ok together, but my archiver shell would not work with both, and when I throw Geneva and NeoDesk on, Outline doesn't work either. So, at long last, this brings me to my questions...

1) has anyone else encountered a similar problem on their Falcon? This didn't happen on my ST.

2) could some kind soul tell me what the syntax/arguments are for shell_write()? The archiver shell is literally my archiver shell, and its using Pexec() now, so I wanted to try updating it, but my documentation is to old to cover shell_write().

3) And lastly is anyone compiling a list of software that does/doesn't work with the Faclon (and what is needed to get it working i.e. backward, video modes, etc.)? If not, would people be interested in such a list? (And yes, I'd be willing to compile it if people are interested, and willing me to send me their lists)

Thanks for any help,
Andrew (elvis@watserv.ucr.edu)

Okay, so how am I supposed to get access to CIX through JANET?
Why don't you post an annotated listing of all the files CIX has
so I can compare with the standard FTP places!

i=======================================
```

Well, you can write a shell script to do that, just keep calling stzip or lharc or whatever. Or, you can write a small program to do the same. Its just calling the directory function of your language in a loop and doing a Pexec on the archiver with that filename in the loop.

However, you will NOT save as much storage that way, do to the filesystem, you only save files in 1 or 2K chunks, so the larger the file, the better use of your storage you make, and each file much have it own archive header bytes which makes small archives less efficient.

I would recommend getting a disk-compression utility such as Data Diet or DataLite or one of the other such partition compressors (like STacker or MS-DOS 6.x). I'm thinking of getting one myself, but in your case, where you have lots of individual files, I think you would benefit best from such a product.

==========
I didn't have any trouble getting Storm to run on my Mega2, however, when calling a IBM Pc bbs the Ansi Color didn't kick in.
==========

STorm's VT100 is about as useful as Flash's VT100, and STorm doesn't have access to VT52. I wish I had a Zyxel because then Connect would be worth the money. Ever get help on the CoSHy commands? That's a very powerful script language. Not as good as STorm's BASIC as far as a language, but CoSHy has commands for reading DTMF tones and taking voice mail and stuff!

1661. Wanted - PD or Commercial MATH CAD type program for ST

Newsgroup: comp.sys.atari.st
Date: 1993-11-11 17:39:06 UTC
From: winters@access.digex.net
Message-ID: <2bttbq$j3j@access.digex.net>
Source record: 198632

I found one MATH CAD type program in Atari archives, but it would not load properly. Anyone know of any good PD or commercial programs where you can type in equations etc... and have the results displayed graphically, perform integration etc.....?
I know the MAC has a package, but I just want something to play with - not spend an arm and leg (the pest who has been telling everyone to purchase MACS over Atari doesn't realize that Apple software is somewhat more expensive (to say the least!) than our humble Ataris....).
Thanks for any recommendations.

----- Mike

1665. C compilers on the Falcon?

Newsgroup: comp.sys.atari.st
Date: 1993-11-11 19:03:45 UTC
From: elvis@watserv.ucr.edu
Message-ID: <2bu2ah$et7@galaxy.ucr.edu>
Source record: 198645

Hi,
I posted earlier about some Falcon questions (mostly JarXXX and Speedo on the Falcon), and left one out. I have been unable to get the C compilers I have to work on the Falcon. Sozobon's cc says it can't find the compiler, Megamax/Laser C bombs quite spectacularly, and Prospero (from an ST Format (I think) cover disk, so an old version I expect) freezes up when it gets to the first line of code. Has anyone else gotten any of these to work on a Falcon? Or can someone recommend a good replacement? Should I just switch to Gcc now that I finally have 4 megs of ram?

Thanks,
Andrew (elvis@watserv.ucr.edu)

This isn't quite what you want, but there's a demo of the commercial math program ElCal called SubCal. I have it, but I think my copy is corrupted slightly, because it freezes every time after I do a computation. It is a good program...it'll do roots, integrals, plots, and comes with all the common math functions. It'll handle four equations at once, and uses variables and place holders. If you want to do stats, you have to pay $44 or so for the full version, but I find the demo very satifactory. I seem to remember that I got it in an archive called ULTGRAPH or something like that with a bunch of other plotting programs.

Sure about that? I thought the MultiTOS AES was basically the same sort
of idea as Geneva (except not as good :), but it needs to run with MiNT.
The MTOS AES allows more than one GEM program to be resident at once, like
Geneva, which is something MiNT alone cannot do. It is certainly much
different than the Falcon AES except in appearance; running MiNT alone on
the Falcon (with AES 4.x) does not let you multitask GEM programs; it has
to load the GEM.SYS file, containing the MTOS AES. I have a feeling that
with little modification, the MTOS AES could be made to work without MiNT
and allow GEM programs to coexist cooperatively... though I don't know
why you'd want to since Geneva is available... :)

I fully agree. I have Geneva and MTOS on my TT w/Nova 16m graphics card,
and Geneva is FAR more usable, even though it is only cooperative
multitasking. It will be even nicer when I can run MiNT and PowerDOS
under it so I can develop in GCC on my Minix partition and network under
Geneva... MiNT will slow it down a bit, but the main slowdown in
MultiTOS is due to the AES, so I don't think it will be too bad.

1669. GENEVA mouse problems

Newsgroup: comp.sys.atari.st
Date: 1993-11-11 20:48:34 UTC
From: csullogg@cc4.crl.aecl.ca
Message-ID: <11NOV93.15483475@cc4.crl.aecl.ca>
Source record: 198619

I have had to quit using Geneva for a while because the mouse keeps disappearing. Typically, I autorun STalker, STeno, Pagestream, and Halrekin II (three out of four are desk accessories and could normally be loaded together anyway) and then load in-out codes like WordPerfect, TouchUp and LDW. Even with just the basic autorun codes, the mouse keeps disappearing and I cannot waste the time diddling around while on the job. Therefore, I have returned to MultiGEM, which has been ROCK solid on my TT for over a year.

I would prefer to switch back to Geneva and hopefully the bugs I have experienced will be eliminated (I have contacted Gribnif directly and they have been extremely helpful).

You didn't "title" your article correctly. It should have somehow
conveyed:"... Cubase Owners: ST or Mac" ... and then
you should have included the numbers of years Cubase has been
on the ST vs number of years on the Mac... to get your point
across a little better. "ST vs Mac in the World of MIDI" is
rather vague with respect to your article.

1672. STorm VT100 settings

Newsgroup: comp.sys.atari.st
Date: 1993-11-11 21:35:28 UTC
From: lancer@wpi.WPI.EDU
Message-ID: <2bub70$ek5@bigboote.WPI.EDU>
Source record: 198629

Since a few people asked, here are my successful terminal settings for
STorm 1.00's VT100 emulator:

Under Settings, Emulations, load the VT100 emulator and click on it.
Select Configure and set Keyboard Appl. Mode and Cursor Appl. Mode on
and everything else off.

Under Settings, Terminal, set Line Wrap on and EVERYTHING ELSE OFF,
and select VT100 as your terminal.

That's it. At least on MY UNIX host, that works wonderfully.

I am having a few problems with the program, though... Zmodem
receives the file name on download but none of the data... Also, it
"remembers" previous errors and reports them when you try to download.

Other than that it works great... I'm getting 235cps downloading with
Ymodem-G at 2400 baud...

>>bad programs and using Gem-like programs one changes the OS. Very sensible!

>Many of these "bad programs" are ones people use everyday for very serious
>work. Some (many?) are no longer supported or upgraded by the companies
>which wrote them.

Old software that is needed for some reason and not upgraded
anymore is a major problem indeed. But these problems are really
the application programmer's fault. OS development cannot take
old broken programs into account all the time. I for my part
think that the decision for MiNT/MultiTOS is a decision to keep
up with the future rather than with the past OS-wise. A good
decision made by Atari, and a good decision for anyone to make.

>>And the consequences are clear: Whatever ATARi implements to MTOS in the
>>next years: No program will use it as the development in the ATARI
>>community is stopped by incompatible OS versions like Magix and Geneva.

>This is just plain false. Firstly, Geneva can not be labeled incompatible. It
>is more compatible than MTOS will ever be.

I cannot comment on Geneva, I'll just say that Harald and Bob
seem to use "compatible" in two different meanings: Harald says
that Geneva is not compatible with MultiTOS, and Bob says that
Geneva is more compatible to old programming techniques than
MultiTOS (probably true too). Nothing "absolutely false" in this
discussion...

>Secondly, we will implement every
>feature Atari does in MultiTOS to remain compatible. Furthermore, our other
>programs, such as NeoDesk, will take advantage of the advanced capabilities of
>MultiTOS and Geneva.

That all sounds nice, but I wonder what the point of this
parallel development of nearly identical functionality is.
Wouldn't it be more useful to write clean, up-to-date
replacements for the old, broken applications? If you think MiNT
is too slow, what about rewriting the time-consuming parts in
assembler?
Personally, I sometimes supect that the third party multitasking
systems are actually wanted to have slight incompatibilities to

draw people away from the MiNT scene. Commercial software houses
may dislike the MiNT scene because of the strong competition of
freeware developers due to the abundant availability of freely
available developer docs, and because of the competition of
power tools easily ported to MiNT/MultiTOS from the Unix world.

There's a Mac version of the MiNT kernel; apparently it runs
MiNT-compatible TOS/TTP programs quite well... Almost anything that
doesn't try any VDI or AES calls will (probably) work.

Dunno about speed compared to an ST... you can get much faster Mac
hardware to run it on. This Mac version of MiNT is the only way to run
most GNU programs on Apple hardware...

That's no solution for ST/TT/Falcon owners; unless, of course, you want
to run it on the Spectre GCR (I doubt the Windoze version would run on
the DOS emulators... it probably needs "Enhanced" mode).

For what hardware? On the ST it would probably be embarassingly slow,
not to mention the fact that the graphics would look terrible.

So, Jaguar or Falcon? I guess it'd have to be for the Falcon, I doubt
you could have a shareware cartridge... (then again, it could start a
whole new market)

> atari.archive.umich.edu would be greatly appreciated.

I think it's of genereal interest (there about five user per day trying
to login as ftp/anonymous on our ftp-archive).
To access an archive you have to use an ftp-client ("ftp"). Don't try
to login via telnet/rlogin... it won't work. Start ftp with one argument:
the site you wish to connect to (example "ftp ftp.tu-clausthal.de").
You should prefer the hostname if your machine allows hostnames. If a
name is not working try the ip-number (example "ftp 139.174.2.10").

Login as user "ftp" (or "anonymous") and send your own email-addr as
password (most sites are also accepting "your_userid@").

From this point you are able to use the ftp-cmds. For a complete list
of allowed cmds read the manual of your ftp-client.
Some archive-site are providing special cmds (like online-index-lookup
or find cmd). Read the site specific README file.

Bye,
Wolfgang.

Source record: 198636
Cross-posted to: comp.sys.atari.st,sunyab.forsale,misc.forsale.computers.other

I have an ATARI 520ST available. It has been UPGRADED to 1 Meg of RAM. It is in excellent shape and it comes with:

TWO 3.5" 720k drives and plenty of disks.

Software: e.g. a word processor (Wordwriter), communications software FOR CONNECTING TO THE VAX network, plenty of cool games, etc.

Monochrome monitor.

1200 baud external modem.

Owner's Manual(s)

Panasonic printer--9 pin dot matrix--new ribbon, works well and is incredibly sturdy!

I will entertain all offers. I am asking $275 + shipping for EVERYTHING.

This really is a great college computer--it does everything you would want it to do and it's really cheap. But it has served me well and now it's time to pass it on to someone who can really use it.

Please e-mail me if interested.

Thanks to all.

I really wish you guys would stop spewing about the '040 being
"clock-doubled". It's not "clock-doubled" in the same way the Intel
CPUs are (which is why you don't see Motorola selling them as
"040dx2/64" chips). The '040 uses the clock in a different way than the
Intel chips (I'm peeved at myself for not saving the post from
comp.sys.powerpc that explained this properly).

They _did_ however, just release a couple of "clock-doubled" (in the
Intel sense of the word) 68k chips ('030 I think, possibly '040) for use
in laptops.

>

That's a major subject! You could start (if you haven't already) by
constructing your own form_do(). This is based on an evnt_multi and
form_keybd+form_button. Once you have that working you will be able to
open as many dialogs as you like as long as you don't lock the screen with
wind_update while waiting for events. Instead lock the screen only when
you need to draw to it.

You will then be able to receive mouse clicks from several dialogs at the
same time. You will eventually need to put this into windows so that they
can be moved around and receive redraw messages.

I'm sure others will be able to help a little more.

```
=============== quote ==================
I hope to dig up some real unix sz/rz sources one of these days (when
I'm not busy doing other things), and do a decent MiNT version...
Unless some other kind soul does it before then! ;-)
========================================

ARGH!!! XYZ is a horrible thing to use with MiNT. It runs in supervisor
mode so its really bad. I was going to port RZ and SZ but I found an older
port of the Unix sources (by Bammi I think) that was compiled in Alcyon or
MWC. All I did was recompile in GNU C for more efficiency (not much
difference really) and it works fine in MiNT. Its only real problem is the
lack of MiNT filenames and the fact that it does some direct hardware
calls for sending an RS232 break (how else can you do this?) and it traps the
critical error vectors, so if ANY program bombs, MiNt will trap it nicely
as usual, but RZ or SZ, if running, will think they crashed too! and abort.
I was going to do a better port, and add in GEM ACC port, but I didn't think
there was much of a need. Is there such need?

As it is RZ and SZ don't eat that much CPU at all (not at 2400 anyway!!)
because they don't run in supervisor mode like XYZ, so MiNT can pre-empt it
when it needs to. It does east RAM though (I only give 'em 200K with limit,
but I was going to fix that too).

The original Unix sources aren't that good though. The code uses lots of
global variables and is not well suited to any major changes. For instance,
if you wanted to modify the code to handle 2 simultaneous transfers you
couldn't do it, too many globals, your best bet would be to hope you could
coax shared-text out of it.

Anyway, CYA
```

I'm in the planning stage (coming up with structures and planning feature lists and such) of a program I will write in the future. Since it will use lots of text (searching mainly, lots of pattern matching, some replacement and such) I was thinking of building one of the above Un*x programs into it for use by the system (GEM) along with direct access to that program's normal options through script language.

Can someone tell me EXACTLY what these programs do, how they do it, and where I can get docs and source for them.

Also, please E-Mail me with what you think a mail reader should be and do. I'm thinking primarily of QWK, but I'm restricting it to that format. I was thinking of using most of the features of BlueWave, some database features, and a very GEM interface. Anyone got a wish list?

Don't expect results any time soon, I still have to finish up my last project. I like to plan far in the future, but some day (say year 2024) when this is done, I'd like it to be complete, MultiTOS friendly, and actualy stable.

Thanks,

Hi,
> Geneva is far more usable than MiNT, though it is only cooperative
> multitasking...

Is this true ? Magix is a preemptive multitasker ! This might be an
advantage !

> when two processes share the CPU-time so how can they be faster ? (Magix
> is meant)

It is strange indeed, because you really get the IMPRESSION that Magix is
faster when you work with it. I think the two main differences between
these two systems (MiNT and Magix) are the following:

1. the system routines have been speeded up (similiar to NVDI), so the
system works faster.

2. Magix seems to have a smart algorithm for the timeslicing and the
priority handling. I have the impression that according to several
components (typing on the keyboard, foreground-process, mouseactions, etc)
the priority of the processes are alternated or let's say adapted to what
is needed. Background-processes are neglected, foreground-processes seem
to get more attention or a better priority. So all the time the system
adapts itself to the needs of the user or the running processes. I don't
know for sure but this is my impression I got. In other words: The user
has the impression that he is a customer in a shop in which all back-
ground-activities are reduced because he has entered. MinT hasn't this
flexible priority handling, has it ?

1699. Falcon add-ons from Germany!

Newsgroup: comp.sys.atari.st
Date: 1993-11-12 10:31:10 UTC
From: guenther@vati.fmi.uni-passau.de
Message-ID: <2bvoleINNima@tom.rz.uni-passau.de>
Source record: 198559

OK, there are some very interesting products for the Falcon030 that have
been developed over here, both for the internal expansion port (shit,
not both at the same time). The first one requires some soldering.

Mighty Sonic

The Mighty Sonic is a 32MHZ 030 speeder board with up to 32 megs
(with 16 MB SIMMS 128 megs) of TT-compatible FastRAM, plus a VME
bus (so that you can use all those nice TT graphics boards with it).
Won't fit into the original Falcon case, though.
Price: cheapest offer I found was DM 745.- without SIMMS and with
'socket for VME bus interface', and DM 998.- without SIMMS and with
VME bus interface.
It has been developed by GE-Soft and was presented on the CeBit'93.

Available e.g. from FCS
Goethestr. 7
D-64407 Fraenkisch Crumbach
Tel.: ++49 6164 4601

MW electronic
Heisterbacher Str. 96
D-53639 Koenigswinter
Tel.: ++49 2223 1567

and several other Atari dealers in Germany.

Another interesting product:

MatDigiF

-Falcon Inside-Digitizer w/ real-time digitizing in True Colour 720*288
(576)
-Real-time viewing (25 fps) 180*144 15bit, 320*240 Full-Screen 12.5 fps
15 bit
-20 seconds recording time
-connectors: 1*FBAS, optional 3*IN (e.g. TV, VCR, Camera)
-easy-to-fit (no soldering required)
-PAL and NTSC modes, optional SECAM

Price: 498.- DM

Is available from the developer: Matrix GmbH
Talstr. 16
D-71570 Oppenweiler

Tel.: ++49 7191 4088

Weregoose

All this taken from ST Computer, issue 11/93.

In article <A8178@MS.maus.de>, Julian_Reschke@ms.maus.de (Julian Reschke) writes:
[deleted discussion of the merits of Magix vs, MTOS]

In an ideal world Atari would supply us with a fast and reliable multi-tasking system. In reality it doesn't work that way. I have MTOS, Geneva and Magix here and Magix is certainly the fastest.

I would like to see the authors of Geneva and Magix make their system docs public. They are of course free to add extra functionality but should be careful to ensure that this functionality does not conflict with the new AES.

I found that my custom form_button() does not work with Geneva. I have not used any undocumented features and the routine is 100% legal. Indeed it works on all TOS versions, MTOS and Magix. This form_button is used in all my programs including GEMBench. Under Geneva it causes a full redraw of the screen. Now this is Geneva 0.95 (?), I haven't been able to get a copy of the latest version.

Being in the lucky position of a journalist, I didn't have to buy all three systems. But you can't expect every programmer to buy Geneva and Magix. Making the docs public will enable programmers to make programs that are compatible with all systems.

This will make for a better solution all round.

BTW - when is Magix for Falcon going to be ready?

>>"singletasking" TOS version.

>Could you please explain yourself? This statement seems a contradiction to me.
>If two processes share the cpu, they get half the time.

What I wanted to say is that if you use only one application under Mag!X
this process runs faster as if you were running it under plain TOS. So even
those people who do not really want to multitask will profit from Mag!X
because of its higher speed compared to "singletasking" TOS versions.
When running several processes Mag!X gets slower, of course. But compared to
MultiTOS you can use much more programs the same time without suffering from
this loss of speed.

There is a new XBios call Floprate() which you can set the step-rate
with. Sorry, no docs at hand. Should be something like
Floprate(drive,rate).

The authors shouldn't add any functions MultiTOS hasn't but should see to
get their systems as compatible to MiNT/MultiTOS as possible. In this case
no extra docs will be needed.

>Magix. Making the docs public will enable programmers to make programs
>that are compatible with all systems.

You're compatible with Mag!X if your programs are clean. There's no need for
any extra programming or any adaption to Mag!X.

: Please post any suggestions or email me at rbrand1@gl.umbc.edu

I don't think Kermit in Uniterm has settings as such. I do this UNIX-ST
transfer all the time and it is bloody slow. I found that files would come
out corrupted, unless they were UUencoded on the UNIX machine, sent via
Kermit in ASCII mode, then UUdecoded on the ST.

Are you running C-Kermit in Server mode? I founf this a lot easier than
using send and recieve. Just type server at the Kermit prompt, then press
Alt-T in Uniterm. Use 'Disk Utils' to set the correct path on your ST
(note this is not saved in the UNITERM.INF file), and then use PUT and GET
to do the file transferring.

Source record: 198581

1) You are programmer, and you know assembly : you get MonST, or Adebug,
you find the call to Xbios(88) or Xbios(5), you look at the mode_code, and
you know which value must be patched.

2) You are NOT programmer, and you need someone to get THE good value.

3) Under your debugger, you must write down a little sequence of hexadecimal
opcodes, including the mode_code. Or ask it to your contact.

4) Make a copy of your program !!!

4bis) Take your best-liked disk editor, Search for the list of opcodes you've
noted, and replace the mode_code with this method :

a- From RVB to VGA : replace mode_code by (mode_code and(not $20)) or $10
b- From VGA to RVB : replace mode_code by (mode_code and(not $10)) or $20

5) If you can't do this, try to get a hacked copy.

For Vertical Mayhem, the mode_code is $23, which must be changed to
$13...but I don't remember the sequence of opcodes...

: transfer all the time and it is bloody slow.

Of course it does! The whole menu of these. Similar stuff on Unix
side is achieved by ~/.kermrc file.

Your transfers are bloody slow because you are using a default block
size, which is 94, and is meant for a very, very noisy lines. Set
block size to 1024 (I think that this is max for Kermit on Uniterm,
although current kermits can do much bigger blocks and windowing protocol)
and speed picture will change in a drastic manner. Unless your line
is really noisy, then you will have experiment which block size gives
you the best throughput. Do not forget set CHK to type 3 (CRC and not
checksum).

: I found that files would come
: out corrupted, unless they were UUencoded on the UNIX machine, sent via
: Kermit in ASCII mode, then UUdecoded on the ST.

You are obviously sending binary files in a text mode. They will come
corrupt that way, no doubt about it. You have to send binary files
in a binary mode (kermit -i on a Unix side). Receiving kermit will
adjust automatically.

In case you wonder why a difference between text and binary modes,
try to send ASCI text file as a binary to EBCDIC based machine and see
what you will get on another side. With ASCI Unix machines you may
lock both kermits in a binary all the time, but then line terminators
on text files will not come out properly. Not a very big deal, if you
know what to do about it.

Peeking into documentation from time to time is an activity which has
some advantages.

: analysis of the services offered for the Atari?

I've used GEnie, Delphi and Compu$erve in the past and am presently
using GEnie. Supposedly, GEnie is Atari's official online home.
On there you can post and receive answers directly from Atari personel
such as Bob Brodie. I don'y know much about Delphi or Compu$erve since
I don't use them anymore but unless they have changed significantly,
GEnie is the place to be if you are interested in Atari. But that's
just one persons opinion.

Aside from the great support, GEnie has an interface called Aladdin that
makes the Genie system easy and cost effective to use. Most operations
such as getting messages, E-Mail and File lists are done automaticaly.
The user then composes their responses off line and selects any files
that the user wishes to download. Aladdin takes over and uploads the
responses then downloads or uploads the selected files. Aladdin has
a GEM interface and comes with a scripting language. And it is FREEWARE,
available on GEnie for the downloading.

Unfortunatly, Aladdin doesen't at present work on the Falcon030. So
people like me who have upgraded to a Falcon can no longer use GEnie
quite as easily as before. But it is still where I want to be if
I'm using a comercial service. I just don't use it as much.

First, I'd like to tell some second hand news. I have a friend in NYC who saw one of the Jaguar commercials. I couldn't get details out of him (He's not pro Atari and not into technology), but he described the commercial vaguely as a man sitting in front of a TV set with a picture of a Jaguar (animal) on it. He was TALKING about the Jaguar. Then the commercial ends with the Jaguar coming to life, jumping out of the TV, and eating the guy. Now, I didn't see it, but my friend has no reason to make anything up.
While my friend understands little about technology, he did hear the words "64 bit" on the commercial and assumes the Jaguar blows away any state of the art 16/32-bit game machine. This is in spite of the fact that he described the commercial as "lame by any standards", so maybe there's hope. After all, people used to choose computers not by what they did, but whether they had 48 or 64 K memory.

But my real question is to those few developers/enthusiasts who know of actual Jaguar games (I understanmd six are shipping officially). My question for those who know something about the games: How many are good examples of super high tech (Ex. 3d games),, and how many are merely rehashes of the standard old 2D games? I'd love to know what the game designers have thought up.
Thanks in advance for any news!
Jeff

If you buy an NEC 3D, or any other multisync that can handle ST low & medium
(CGA compatible), it will handle all modes. BUT, the 3D uses _interlace_
for sizes bigger than 640x480, which means ScreenBlaster/BlowUp will be
interlaced. I'm still looking (probably to no avail) to find a
multisync that can handle all rez's along with non-interlaced SVGA.

Feel free to correct me on this post, which I know would happen anyway
if I am wrong!!

Anyway, can somone post a list of monitors that can handle _all_
Falcon rez's?? When I get my Falcon in the next couple months
I want to be able to have only one monitor...

I've seen an ad. It showed some game shots. One was from a 3d game--it looked cool, but it was far from photorealistic. The friends of mine who were sitting with me were thoroughly nonplussed by the game--they thought it looked lame & didn't want to hear anything about the complexities of 3d modeling. The ad was on during The Simpsons, which is a credible time. All in all, and I say this as a BIG Atari cheerleader, the ad was pretty lame (especially compared with the Sega CD ad where the guy gets plastered to the wall).

Thankyou. I realise now I was talking rubbish. I thought I had scanned all the Uniterm menus, but I found a little one tucked away under settings... You can always trust someone to put you right! Thanks. I have only been using it for a few weeks.

: Of course it does! The whole menu of these. Similar stuff on Unix
: side is achieved by ~/.kermrc file.

Great. I've changed them in Uniterm, but I don't know anything about the .kermrc file. Kermit is installed on our fileserver, and that's all I know. Could you tell me briefly about it?

: Your transfers are bloody slow because you are using a default block
: size, which is 94, and is meant for a very, very noisy lines. Set
: block size to 1024 (I think that this is max for Kermit on Uniterm,

Yep I just changed that in Uniterm, but again, how do you change it in C-Kermit?

: You are obviously sending binary files in a text mode. They will come
: corrupt that way, no doubt about it. You have to send binary files
: in a binary mode (kermit -i on a Unix side). Receiving kermit will
: adjust automatically.

I do know and understand about binary/ascii files. I switched between them in Uniterm by the [binary] button. I thought this would set binary mode in C-Kermit and Uniterm. Obviously not.

: Peeking into documentation from time to time is an activity which has
: some advantages.

I have read the entire Uniterm Doc a few years ago, but not since I used it. I've got absolutely loads else to read. The only doc for C-Kermit I can think of is by using 'man kermit', which I will try. I hadn't thought of this.

Thanks again for correcting me. I am honestly not as stupid as I must have sounded - Just new in the comms field.

Why could I not reply to you via E-mail? It just came back with a service unavailable message.

I use a ACER 7015 multisync which does SVGA non-interlaced. I am using it on a MEGA ST, but I am told it will work fine with the Falcon...

1735. Fractal Programs?

Newsgroup: comp.sys.atari.st
Date: 1993-11-12 22:51:18 UTC
From: john@albemuth.equinox.gen.nz
Message-ID: <H.eg.DN7flx&EYXk@albemuth.equinox.gen.nz>
Source record: 198528

Hi There,

I've been looking around for good, fast Fractal programs which run well in Monochrome Hi-res mode on my ST.

I've had a look at the port of Fractint (ported by Howard Chu) that is on atari.archive but it seems to be not complete, as you can't save files and not all the fractals types work. Has this project ever been progressed past this stage of development??

Can anyone else recommend a good, fast, flexible Fractal program that works in Monochrome and can save files in a regular graphics format so that pictures are exportable to something else.

What is everybodies favourite Fractal Program??

Any suggestions would be most welcome.

Cheers,

I thought all SVGA monitors were multiscan monitors (although I know nothing about monitors). I thought multisync was just a registered trademark of NEC for their brand of multiscan monitors. I guess this is incorrect??

So to be able to run all modes on a falcon with one monitor I would need a multisync (not multiscan) monitor that can go as low as 15Khz and have a vertical range of 50-78Hz?

1745. STalker/SZ/RZ

Newsgroup: comp.sys.atari.st

One helpful soul told me that gzip (GNU Zip? If so, can I run it under TOS?) would archive each file in a directory into individual archives--could I unpack them with, say, ST Zip 2.30? Thank you for the input!

Another kind person said that I would get better compression if I did just stick them into a single large archive. I didn't know that, but I don't think it responds to my worries about one bad file taking the whole thing with it, which happened to me several times--long ago, I admit.

To reiterate the response to the suggestions I consider some species of Packer... Perhaps I am still ignorant of how they work. I have PFX-Paked all my programs and accessory files, and saved mondo disk space that way. All my art files are stored in some species of compressed format, such as TN? or Atari IFF (Vertical Word Compression) files (Deluxe Paint, may it rest in peace and GVIEW load the files, some day). I'd have to unpack them to use them, right? You need something like Datalite or Data Diet to do it on the fly... And with so much so compressed, I just haven't thought I'd get the savings other people have...

Again, though, the compression is for back-up files on floppies--hundreds of 'em.

In article <1993Nov12.122357.4805@arizona.edu> jeff@jupiter.arizona.edu writes:
>While my friend understands little about technology, he did hear the words
>"64 bit" on the commercial and assumes the Jaguar blows away any state of the
>art 16/32-bit game machine.

64-bit bus, 64-bit RISC processor, 68000, and a 32-bit DSP.

>But my real question is to those few developers/enthusiasts who know of
>actual Jaguar games (I understanmd six are shipping officially).

Four initially. CYBERMORPH, DINO DUDES, RAIDEN, and CRESCENT GALAXY.

>My question for
>those who know something about the games: How many are good examples of super
>high tech (Ex. 3d games),, and how many are merely rehashes of the standard
>old 2D games?

Of the initial four, only CYBERMORPH is really "distinctive". It's a flying
rescue/adventure/shooter with lotsa polygon graphics. The others are all
pretty standard. Give the Jaguar a few months to get the more interesting
software, though; a good title to keep an eye on is ALIEN VS. PREDATOR, which
(though incomplete) already blows away most games on the Sega and Nintendo.

>it looked lame & didn't want to hear anything about the complexities of
>3d modeling.

That was CYBERMORPH. The game is more complex than can be shown in a clip;
the actual gameplay is a little deeper than "shoot anything that moves", and
the terrain is a full 3D world.

>All in all, and I say this as a BIG Atari cheerleader, the ad was pretty
>lame (especially compared with the Sega CD ad where the guy gets plastered
>to the wall).

That's only the "teaser" ad. The full-blown commercials start next week.

1752. STE

Newsgroup: comp.sys.atari.st
Date: 1993-11-13 05:37:02 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <2c1rpu$d2h@golem.wcc.govt.nz>
Source record: 198512

I'm compiling a list of programs that support extended features of machines,
(e.g., Blitters, DMA-Sound, extended palettes etc), mostly these will
obviously be games, currently the list is not too large, and here is
an example.....

Name of Program Code specifically for (x) features/machines:

Wings of Death STE Support, Ext' Sound Support
Lethal Xcess STE Support, Ext' Sound Support
SleepWalker STE Only
Robocop 3 STE Support
Creatures STE Palette
Wrath of the Demon STE Palette
STOS Programming Language STE Specific Commands (Incl' Extensions)
Starblade 1 Meg Enhanced
Blat (PD/SW) 1 Meg Enhanced, STE Only
1st Samurai 1 Meg Enhanced
Star-Glider (One & Two) Monochrome Support
Cuddly Demo 1 Meg Enhanced
Ishar 2 STE Support
The Immortal 1 Meg Only
Civilisation 1 Meg Only

That Should give you the idea, if anyone has any info on machine specific/
supportive (or memory specific/supportive), software, then please E-Mail
me at the below address with the info', I will post the final results
onto the net! (Don't bother with Falcon *only* software, as that's
likely to be pretty obvious!)

Things such as FPU, Blitter, DMA Sound, Palette, External Devices, Extra
Drives, Co-Pro's, Extended RAM (Software using/working only with, extra
RAM (usu 1meg+)), Monochrome (Few games work in 640*400*2 mode!), support
for all of them, and anything else you deem worthwhile!

Thanks in advance.

>better choice.

Now once and for all: If I fork out $$$ and buy me a real NEC
Multisync, will I be able to display *all* resolutions of the Falcon,
even the ScreenBlaster / BlowUp030 ones? (BTW, which one of those was
the better one again?)

Well, if you want to display *all* of the resolutions availiable, you
will need a multisync that goes from 15Hz-40+Hz vertical.

If you get most of the multisyncs around these days, they start at
30Khz and go on up to around 40-60Hz. This is still quite useful with
ScreenBlaster/BlowUp, but you won't be able to get any of the RGB
monitor resolutions, which may place you in the annoying position of
not being able to play some games and/or demos. You will be able to
get some pretty large working resolutions, though.

One other thing - even if you do get a montior that can sync down to
15Hz, you'll still need a special adapter to use both VGA and RGB
resolutions (basically just a VGA adapter with a switch added - the
specs are in a document called "falcadap" on a.a.u.e - I built one
myself using an old DMA port from a dead ST).

Oh, just for reference, I have a 14" Princeton Ultra 1400 (Which I had
originally for an STE, but it works great on my Falcon!!) and
Screenblaster. I want a larger monitor though - the 1280x960 mode is
impossible to read on a 14" monitor!!

I have just got hold of STORM100.LZH and PTCH101.LZH which is an upgrade
from v1.00 to v1.01. In the docs it mentions a fix for Z modem problems.
I figure this might solve your probs.
Myself I have had no hassles. I used to use Flash v1.6, but I really found
STORM easy to install & use. I'm registering my copy!! :-) TTYL.

1755. Re: Falcon040

Newsgroup: comp.sys.atari.st
Date: 1993-11-13 09:54:20 UTC
From: Gordie Meyer ATARI UNITED cofounder <BIBLINSKI@delphi.com>
Message-ID: <931113.17660.BIBLINSKI@delphi.com>
Source record: 198530

In an article on the front page of Electronic Buyer's News, Sept. 20th issue, is the following:
"Current 68040 chips specified as 25-, 33-, and 40-MHz are already capable of running internal processing circuitry at 50, 66, and 80 MHz, respectively. That has been true all along, since the chips were introduced."

The article goes on to describe how the doubled speeds are done, and it isn't quite like the Intel chips, but it has the same end result. They go faster. Apple will be releasing a couple of color notebooks next April, using the 'double speed' capability. The retail on the base model is supposed to be $3500. It is their entry into high-end portable computing, according to the article.

: PFX-Paked all my programs and accessory files, and saved mondo disk
: space that way.

Mondo means World. I assume you meant 'zero' or something to that effect.
I don't know how this is possible. Most packers (I say again, my
favourite is Sentry) will save you an average of around 50% (my personal
experience) over mixed file types. I ran a extremely powerful system from
floppies up to a month ago, by packing all the executables. In my
experience, packers are as safe (safer?) as archivers, and yes, they do
take up less space.

: day). I'd have to unpack them to use them, right?
: You need something like Datalite or Data Diet to do it on the fly...
: And with so much so compressed, I just haven't thought I'd get the
: savings other people have...

If you mean DC-Data-Diet, I thought that was never released, or was very
buggy or something. Please feel free to defend it someone! There is also
the PD program 'Arcdrive'. I never tried it. Can anyone comment?

Also, there is a automatic unpacking program which comes with SentryPack.
Called UNPACK.PRG, it is placed in the AUTO folder, and subsequently, when
any application tries to load a Sentry or Ice Packed file, it unpacks them
on the fly! I have had both good and bad experiences with this method, so
make sure you keep backups until you are sure it works.

Could somebody mail me an address for a ftp-site and a filename for unix-style 'screen' utility program. ('screen' is a program, which allows you to have different programs running at the same time + allows you to change between them by a keyboard shortcut. Only one program outputs on screen at the time. You can also get more screens with another keyboard shortcut (when you create a new screen, 'screen' returns you to the shell prompt.))

Source record: 198538
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,
I'd like to know whether PCspeed or ATspeed can access the serial port
via the PC-means, i.e. ordinary COM-ports. I'd very much like to
hear from people using this configuration. Any info on usable
comms-packages would also be appreciated.

The reason I ask is that our company is setting up an X400 mail/news
service, for which you need to run a PC-package. Since I don't have a
PC, I am thinking of buying a PC-emulator.

Thanks for your time.
Bye,

1761. Re: Falcon monitor question

Newsgroup: comp.sys.atari.st
Date: 1993-11-13 14:02:19 UTC
From: trek@cbnewse.cb.att.com
Message-ID: <CGFoBy.KMG@cbnewse.cb.att.com>
Source record: 198534

In article <1993Nov12.170227.16310@umiami.ir.miami.edu> dlk0ms9s@umiami.ir.miami.edu writes:
in response to following 2 articles (not included)
>In article <2c0qqm$528@usenet.rpi.edu>, bossoj@alum01.its.rpi.edu (Joseph Charles Bossolini) writes:
>> In article <CGE1I8.AH7@sci.kun.nl>, Sander Stoks <sanders@sci.kun.nl> wrote:
>> [most stuff deleted]
>> Falcon rez's?? When I get my Falcon in the next couple months
>> I want to be able to have only one monitor...
>
> I use a ACER 7015 multisync which does SVGA non-interlaced. I am using it on
>a MEGA ST, but I am told it will work fine with the Falcon...
>
>-Mark Santoar

Acer 7015 has following specs:
14" diagonal .28mm dot-pitch
resolution 800 dots by 600 lines
video in: ttl or analog
sync sigs: ttl+ or -; composite or separate
scan freq: auto-sync scan 15-36 KHz Horiz
auto-sync scan 45-90 Hz Vert
freq band width: 35MHz min at 3dB
active display area: 245mm (wide) x 180mm (high)
text color: amber, green or white on blue

So someone knowing the needs of SVGA can now decide - the compatible standards it lists are VGA, PGC, CGA, MDA, MCGA, EGA, MGA, Hercules. Nothing about SVGA - but maybe it wasn't around when the monitor was produced? Wayne

K00L.

Anyway, IMHO, it would be silly to put a new (ie, faster) DSP into the fabled Falcon040... there is little enough software for the 56001 in the Falcon030, and if you put a new DSP in, it'd mean starting over completely.

Knowing Atari, here's what the Falcon040 will be like (this is NOT to be taken seriously!):
- MC68040; 25Mhz part "clock-halved" to 12.5 Mhz
- 12.5Mhz 16-bit system bus
- limited to 16M (actually 14M usable) of RAM
- 1M of RAM standard
- the same graphics as the Falcon (ie limited to low resolutions with lots of colours; high resolutions at bad refresh rates)
- "Processor Direct Slot" which is actually a MegaBus slot, for those millions of MegaBus cards we all know and love
- no VME slot
- no SIMM slots
- "1040ST"-style case ("To make it easier for musicians to carry it around to gigs!")
- c.1984 "tank" mouse
- mouse and joystick sockets under the keyboard
- no SCSI-II port
- retail price $3000
etc.

Here's what I'd like it to be:
- MC68040 at 25Mhz (or 33Mhz; the extra 25% clock speed isn't that important, really)
- 25 Mhz 32-bit system bus with all peripheral devices no the motherboard specced to run at least 25Mhz
- 4M of RAM standard; 2M of VRAM (for use by the built-in graphics - 800x600x32-bit (8-bits alpha), 1024x768x16-bit, 1280x960x8-bit, 1600x1280x8-bit, etc) and 2M of 256k SIMMS in 8 SIMM slots (interleaved in banks of four to speed up access times, upgradable to any combination of 256k, 1M, 2M,

4M, 8M, 16M SIMMs as long as they're in groups of four, giving
a max RAM on the motherboard of 130M)
- Motorola DSP 56001, accessed the same was as the 56k in the
Falcon030
- 2 6U VME slots (is that right? I mean the same as the TT)
- 1 9U VME slot
- AppleTalk LAN connector
- LAN software for conencting to an AppleTalk network and
accessing AppleShare servers and printers
- SCSI-II port supporting FAST and WIDE SCSI-II transfers and DMA
into any memory on the motherboard
- DSP-out port (same as Falcon030)
- 2 serial ports, 1 parallel port
- mouse port and joystick ports (as well as analog joystick ports)
- NICE mini-tower case, with a good keyboard (at least as good as
the TT's)
- A BETTER MOUSE! Any better mouse! Logitech's stuff is cheap!
- any other Falcon ports I might have missed (RCA stereo output
instead of the tiny headphone jack please!)
- sound as good as the Falcon's
- SCSI hard drive built in (no IDE interface, thank you), 3.5" FF
- two free 5.25" drive bays (for CD-ROM and tape drive or CD-ROM
and optical drive)
- suggested retail price (ie, you will actually pay less) $3000 US

Did I leave anything you on my Christmas list? :-) Maybe a CommLynx
port or two for attaching it to your shiny new Jaguar...

I was going to do this, but the only UUCP transport I have working on my machine is Hermes, and it's not exactly standard from a sendmail point of view (I don't think, anyway).

What UUCP are you using, and what problems are you having getting it to compile?

1765. Hermes vs. MiNT, Round Two!

Newsgroup: comp.sys.atari.st
Date: 1993-11-13 15:35:38 UTC
From: cherborth@semprini.waterloo-rdp.on.ca
Message-ID: <H.eg.uBA8o890u1k@semprini.waterloo-rdp.on.ca>
Source record: 198546

The Hermes UUCP vs MiNT saga continues!

The other morning, I was fooling around again trying to convince Hermes UUCP to run under MiNT (so I could poll for news/email while continuing to hack on a program in another TOSWIN window)...

I finally got it to work!

That's right folks; Hermes UUCP was running in a TOSWIN window, polling for news/email.

How'd I do it? Well, mostly it was a lesson in the "you can never have too many tools" axiom... On a whim, I started up the rather bletcherous mintshel in a TOSWIN window... I then did "cd g:", since G: is where my Hermes setup lives. "uuwork", and voila, it was going! mintshel actually changes your working drive when you cd to a different disk... since I was no longer working on the universal U: drive, uuwork was able to create it's \uucico.par file, and uucico was able to actually find a site to poll.

There was one glitch; uucico suffered an address error while transferring (after the call was over and it was supposed to hang up!). This could've been caused by several things... First of all, the uucico in Hermes is written in GFA BASIC. Ack. Second, my screen saver (BeforeDawn) kicked in while the transfer was in progress... that may have confused uucico somewhat, or annoyed a section of RAM that uucico was assuming would be ok, or something silly like that.

But, it worked!

Now, if we could just get Martin to harass the uucico author into giving up his code so somebody could translate it into C... If it looks like this is reliable (as long as my screen saver doesn't kick in), I'll be registering Hermes ASAP!

> can tell, is that it does not have a umulation file to support ANSI.

Storm does have Ansi support. You will have to load in the emulation
file from disk thru' the 'Emulation' menu selection. I guess the author
wants a modular design and feel to the program, hence the unconventional
way the program works. The display is faster than STalker but seems more
jerky.

The newer NEC fgx series will not support the 15.7khz frequency... in fact, very few multisyncs out there supports that frequency right now... I am using a Princeton Ultra 14 and it supports all the Falcon modes nicely.

> of the dull, repetitive work.

Step 1: get a decent command-line shell (ex, tcsh, bash, mupfel)
Step 2: get the TOS version of GNU zip (there is a minix filesystem
version as well, if you use minix partitions under MiNT)
Step 3: put GNU zip (gzip) into your PATH somewhere
Step 4: gzip -9 -v *

You can also go "gzip -9 -v -r *" to recurse down through directories; you
could do a whole partition like this.

> Does anyone know if there is an Xterm available for a 1040 ST.

Um, depends on what you really mean by an Xterm...

If you want multiple windows connected to a server, you'll have to use
UW (on atari.archive.umich.edu).

If you want multiple windows open on your desktop, running shells and
things on your ST, you'll have to use the MiNT multitasking kernel and
the TOSWIN window manager; it's a bit like Xterm. If you get the
version Warwick Allison fixed and hacked (tw14+w10[bs].zoo I think),
it'll be much more like Xterm (ie, cut and past works like Xterm).

Source record: 198455

As I was listening to a friend tell me about an old game on the Apple II called 'Taipan' that he had loved, I seemed to recall a game called Taipan II that I used to have on my ST. I had enjoyed playing this too, so I've had trouble working out why I might have deleted this, but it seems I have trashed it. I got it from a BBS, but I'm not sure if the game was a commercial release. I don't recall anything in the docs to suggest is was (unlike eco, on a.a.u.e).

Can anyone tell me more about this game, whether it did actually exist, and where I can get it? All help much appreciated :)

I just downoladed Upsis, and wondered if someone could tell me what it is. The DOC file was zero-length, so I could not read about it. I tried to run it, but it appeared to run out of memory, even with a clean bootup on my 1040. The screen looked more loke a spreadsheet than anything else.

Anyway, I thought you had to have a license to distribute GDOS. It was sitting there bold as brass in the AUTO folder, so anyone who wants it and doesn't have it, it's at ftp.uni-kl.de.

> around here that did it :-( ), and by release time we couldn't find

My apologies. I was confusing Mountain QWK (which I've never seen) with another program. After reading the responses to my post, I un-LZH'd and ran the readers I had. One was Red Wine (wouldn't load *.QWK), an older (v. 1.07) version of Maximiser and a newer version (v. 2.09b). These wouldn't list out the messages in each conference and the means of scrolling messages was a bit clumsy. Otherwise they worked okay (although the option of an external editor would be nice). I also found the timeout dialog boxes in the 2.09b demo so annoying, that I registered SLMR instead.

> a BBS that it couldn't handle. I would appreciate knowing which
> version of Mountain QWK it was as well as the QWK door programs
> that it wouldn't handle, so I can let the author know.

As regards the problem with not loading packets, the sysop of the BBS in question was experimenting with a variety of door programs at the time, so this may well have been the problem. SLMR/OLX seemed to be the only ones that could load them all. Whatever program he settled on seems to work well with Captain's QWK & MMST now.

Since I'd rather use something which would allow me to take advantage of 4 mb RAM instead of the 703K available with PC Ditto, I'd be most grateful if someone could point me in the direction of an FTP site which has Mountain QWK.

Once again, my apologies the the author and beta testers of Mountain QWK.

1780. Changing the battery in DeskCart...help needed

Newsgroup: comp.sys.atari.st
Date: 1993-11-13 20:04:17 UTC
From: johnmc@mks.com
Message-ID: <1993Nov13.200417.18101@mks.com>
Source record: 198463

Years ago, I bought Deskcart, a clock and a variety of accessories in a cartridge. Just recently, the battery died. Looking at my old manual, it says to send in the cartridge to have the battery replaced. Alas, QMI doesn't exist any more (so far as I know: phone calls have had no response). The obvious non-destructive methods of prying it open don't work.

Anyone have any suggestions?

> Please contact me, this is seious...

ST ASCII files are already in MSDOS format. To convert to UNIX format,
the simplest way is to use dos2unix and unix2dos on the UNIX machine (most
UNIXes have these two utilities). I have a unix2dos program for the ST,
which I use under Gulam. Also, you can automatically convert with
some modem programs. Finally, if you use mtools on the UNIX machine to
write the floppies, you can tell it to convert the ASCII files for you on
the fly. Other MSDOS compatible floppy utilities for UNIX boxes can probably
do this as well.

This conversion is mostly trivial. UNIX delimits lines with a linefeed
character, MSDOS/ST uses a linefeed and a carriage return. A one line
sed script can do the conversion, or a very small C program.

The first two questions would require long answers, but the last two are
easy. Grab up the GNU text utilities source. You can probably find a
version that has been ported to the ST (the binaries are available, so I
assume the source is also).

Atari ST Computer for Sale: ($300 or best offer)

- 520 ST upgraded to 1 MB RAM
- Supra 2400 bps modem
- Panasonic KX-P1091 printer with stand
- can run color software when hooked to TV set
- mouse
- high quality joysticks
- lots of software and books
- (note: no monitor or hard disk)

Specs:

- Motorola MC68000 processor @ 8MHz. Fast as a Mac Classic or SE, or a '286 PC.
- 1 Meg RAM, 192K ROM.
- 1 360K 3.5" floppy drive, IBM compatible (you can read and write IBM disks)

Sound included.

Software:
- Omnires (allows you to run color software on monochrome monitor)
- Phasar (home finance)
- Tempus (text editor)
- OSS Pascal compiler
- CircuitMaker (digital logic editor/simulator)
- Flash (terminal program)
- Shadow (background file transfer)
- Harrier Strike Mission
- Pro Football Wizard
- Silent Service
- Star Glider (GREAT game!)
- Hippo Computer Almanac
- ST Basic computer language
- ST Logo computer language
- lots of good public domain software

Books:
- ST Manuals
- Atari ST GEM Programmer's Reference (Abacus)
- Atari ST Machine Language (Abacus)
- Programmer's Guide to GEM (Sybex)

$300 or best offer.

I think what everyone is missing about this MultiTOS vs. Geneva discussion and the talk of what the MultiTOS AES is.

I'll takle the latter first. MuliTOS AES is not the Falcon AES nor is it a cooperative Multitasker like Geneva. I highly doubt that you could easily rewrite the MuliTOS AES to be either one. It seems like everyone is trying to say that MultiTOS is just like GENEVA or that it is just like Falcon.

The second, is a weird one. Now it seems logical that since GENEVA is fast and MiNT is fast, but MultiTOS is slow, then replacing the AES with the GENEVA system (w/MiNT) would give all the features of MuliTOS with the speed of GENEVA. This may not be a logical conclusion!

Consider when GENEVA switches tasks, during the evnt_multi() loop! No two programs will ever be doing processing at the same time! All programs but one are in the evnt_multi call, so, like TOS, you only have to poll for events when a program is in the evnt_multi call, when you find an evnt, you decide what program gets that evnt, and you task switch to it. Also note that the AES does the task switch (or GENEVA).

MultiTOS is a whole 'nuther animal. Different applications can be processing at the same time, so there is never any instance when all programs will be in the evnt_multi call (such as with TOS + ACCs) during wich the AES can do its polling sequence without interruption. Instead, MultiTOS has to manage GEM calls and such and poll continuously to serve any applications that are within the evnt_multi() call. MultiTOS does NOT do the task switching, MiNT does. This means that you get a better programming model (since you can set-up multiple threads and not worry about other applications locking you out, in fact, you can multi-thread and do one thread for GEM interaction and another for processing if you want).

Why is this slower? Well, the AES as a separate task has to poll while other applications are processing, thus slowing them down because you always have at least 2 tasks running (AES + the application) and somtimes 3 (AES + Desktop + Application) and usually more if you want to "Multitask".
Geneva on the other hand, like TOS, has no need to poll for events while a program is executing. The execution of the program is not slowed by polling because polling does not start until the evnt_multi call. The AES just kinda uses evnt_multi (and other AES calls actually) to do its task switching.
Now, the trick to doing this right, is to have pre-emptive control like MultiTOS, without polling (such as both GENEVA and MultiTOS) perhaps by using Fselect or multithreading, or being completely interrupt driven. I would hope to see some sort of situation similar to the way Fselect works, where the AES would get data when its available and then go back to sleep. However, best bet would be to make everything interrupt driven AND use the same interrupts that cause AES events to task-switch to the application that

shall recieve the event, no matter what the priorities or slicing would demand. That way, no matter how bogged down the CPU actually was, you would still get instant response to your actions (and don't pre-empt screen drawing!) and so the system would still FEEL almost as fast as when running a single application. This situation would require alot of rework of both MiNt and the AES, so I would expect something similar to the way Fselect works to be implemented. Polling just sucks, and so does BIOS character output for printing, but GDOS and Speedo seem to do just that (really makes it hard for a print spooler to get its data when it takes 300K BIOS calls just to write the data through the pipes).

Anyway, this is based on my own observations and not any factual data (except for the printer using BIOS). So, maybe I'm just full of S***, but run TOP with the AES running, like a TOSWIN window, see how the AES eats as much CPU as it can get? Even when you don't move the mouse or click on anything? Now, run TOP in TOS mode, and you should see most of your time as idle. Its not a matter of GENEVA being incredibly efficientm - I would expect MiNT to slowdown GENEVA just as much as MultiTOS, they just work differently.

So far no one has told me anything about how Mag!x works, and without a demo or some US support I really don't see it becoming popular. I need pipes and loadable file system drivers and all that other stuff. Print Spooling using the methods I chose, is not possible without MiNT, not without doing changes to the interrupt vectors, and the OS should not require that sort of program.

Anyway, I hope this gives some of you something to think about anyway, and hopefully ATARI will speed up MultiTOS. There shouldn't be that huge slowdown from running MultiTOS - people tell me 10% slowdown)

```
======================
Old software that is needed for some reason and not upgraded
anymore is a major problem indeed. But these problems are really
the application programmer's fault. OS development cannot take
old broken programs into account all the time. I for my part
======================

I think what most others are forgetting is that programs that break
are either not using the OS to do its work, or are not using it
properly! So, if programs break under MultiTOS it is not ATARIs fault
for making an incompatible OS (I've seen alot of code in MiNT added to
make programs that use "undocumented features" work better), its the
fault of the application programmer. After all, the OS itself is fine.
And someone said that you had to use new calls available in MultiTOS to
make your program work properly, and that is also false.
```

==========
Apples run Cubase (see below), DA's Vektor, Pagestream, Calligrapher,
Timeworks, Lattice C etc? Which Apple drives my Atari Laser?
==========

Well, nice list, too bad that PageStream, Calligrapher, and TimeWorks
are all dead-end now. You will see no new ATARI programs from them.
Calligrapher may have some trouble for you with soe programs or newer
Operating systems (Speedo GDOS already outperforms the LAC format and
it gives trouble with both MiNT, MultiDialog, and LetEmFly). Cubase will
not run under GENEVA and most likely not under MultiTOS either.

That leaves Lattice C, and I prefer GNU C, and I KNOW that I will be able
to take GNU C with me no matter what platform I switch to (although GNU
does not support MAC or any Apple, although people will still compile
the latest GNU stuff I'm sure). And I hate to tell you this, but the
Falcon will not drive your ATARI laser without an adaptor which has not
yet been created, and Speedo doesn't have SLM drivers (or Postscript!).

The Falcon is also highly underpowered for the price they charge. I really
like ATARIs and I hope they continue with better computers, but they will
have to match the MAC prices to make me stick with them. Remember when
buying a TT030 and Spectre was cheaper than a Mac 030? And faster? Now
you can get an 040 MAc for cheaper than a TT030 =OR= a Falcon without
Spectre. Atari will have to cut prices and learn how to furnish LOTS of
high powered software.

I'm hoping the Jag chips will lead to a powerful Audio/Visual system that
can be grafted onto an 040 as cheaply as the Mac Centris. That would make
me stick with ATARI, and would likely make a couple developers stand up
and take notice when the 3D graphics chips can do a full 24 color render
and animation before AutoCad 12 can draw the wire-frame !!

> again: "I have seen the future, it's 3DO!!"

Is there any point in starting a flamewar? I'll bite. :P

IMNSHO, based on what I've seen of Atari and Panasonic advertising, and other systems on the horizon, I doubt any system will have a good hold on the market the way Nintendo and Sega has it now. The 3DO is a good system, but they are marketing it towards a previously unknown demographic, that of computer users that primarily bought their computers to play games. I'm not convinced how many people will buy the 3DO strictly for games, educational software, and (eventually) some applications. I think Atari is smart in trying to go head-to-head with the SNES and Genesis, because they see a desire in the market to move up to a new level, but who knows if they can manufacture enough units and have the marketing clout to make it. They will have at least one year headstart over the Sega Saturn, and possibly two years over the Nintendo "Project Reality" (More like "Project Disinformation"). In the end though, Sega and Nintendo are huge companies, and whether or not the 3DO or Jaguar sell like hotcakes, if they make even a decent system, I think it's going to outsell both the 3DO and Jaguar. In fact, if the Nintendo machine really materializes in 1995, then it could be that it blows away both the 3DO and Jaguar, causing yet another new plateau of console systems.

BTW, I don't think they need to sell 1 million jag units before the new year, it would really surprise me if Panasonic sold 1 million units, as I believe that Nintendo only sold around 3 million SNES units in 1992.

>The AES replacement that is part of MultiTOS is basically the same AES 4
>which is in a Falcon. It is not a multitasking environment. MultiTOS
>depends
>completely on MiNT to do multitasking.

Your answer shows clearly that you have NO IDEA.

Falcon TOS contains AES 3.40, which basically is the TT's AES with 3D and
menu extensions (heirarchical, popup menus).

MultiTOS's AES is 4.0, with huge extensions to the previous versions,
including interprogram drag&drop, menu and desktop swapping, background
window handling, and loads of other stuff.

I have a problem. About 5 times im the last week, my ST has
spontaneously changed to 60Hz. I use it in 50Hz on a very old
Black & White TV, when I am using it for comms, so that I can
watch TV on my colour TV. Alll of a sudden, it decides to go
into 60Hz. The first time it happened, I thought the TV had
finally kicked the bucket, but after that, I tried connecting
it up to my other TV once the problem occurred, which can cope
with 60Hz, and it _was_ in 60Hz. I just used RE_SYNC.PRG to flick
it back into 50Hz and carried on as before.

Any ideas? A new virus perhaps?

Steve Taylor.

1806. X11 server for Atari ST

Newsgroup: comp.sys.atari.st
Date: 1993-11-14 20:02:00 UTC
From: u1418@sparc24.cs.uiuc.edu
Message-ID: <CGHznC.GFo@sparc0a.cs.uiuc.edu>
Source record: 198477

I posted something to this effect last month and got no answer.
If you answer this usefully, I will send you $50 via e-mail ;-)

Is there an X11 server available that will run on an a mega STe?
Presumably any such animal would run on other machines as well.

For those in doubt: An X server provides windows locally for
programs on another machine to display in.

I am strongly under the impression that unix windows just supplies
multiple vt100 connections, not X11 support. If this is incorrect,
please let me know.

I'll be running any software via a SLIP connection, at 14.4k baud,
if it has any bearing.

On a related note - an X server would be more useful with a bigger
screen. Right now I'm running Lars-Erik Osterud's STe double-height
emulator, which is very fast and likeable. Is there something with
a bigger virtual screen out there that won't crash my system every 5
minutes?

I'd appreciate e-mail copies of any followups; school has been eating
into my usenet time.

Thanks very much in advance,
~Adam Aulick

Atari/Riebl/Wacker ANS TCP/IP
Biodata TCP/IP
Disk Space:
none (two floppy disks, may load fonts from second disk or font server)
Features:
full X11 Release 5 implementation
Shape, Multi-Buffering, MIT-SUNDRY-NONSTANDARD extensions
PEX extension optional
support of font server protocol
support of X Display Manager Protocol
access control support
compatible to OSF/Motif and OpenLook
high performance (more than 32,000 Xstones on TT)
fast cursor tracking
backing store and save unders support
size of virtual screen limited by memory only, automatic panning
X/TOS/window/server/color supports all video modes at the same time,
including dynamic visuals
loadable key maps (xmodmap format), full support for European keyboard
layouts
3-button mouse emulation with Atari 2-button mouse
may run parallel to GEM (switching with hot key), configurable multi
tasking priorities
about 50 fonts supplied

1809. Jaguar gif

Newsgroup: comp.sys.atari.st
Date: 1993-11-14 21:15:42 UTC
From: tawollen@mtu.edu
Message-ID: <2c675u$5ku@pace3.cts>
Source record: 198479

I just uploaded a gif i scanned of the Jaguar that I found to ftp.uni-kl.de
it is in a .zip format. I have been away from atari for too long, but I think
there is a unzip program.. Anyway it is in "/pub3/atari/incoming_new/jag2.zip
if anyone wants it.. Let me know if it is not readable and I will re-upload
it.

Troy

>

atari.archive.umich.edu has it, in the Telecomm directory, I believe. BTW, this demo is considerably slower than the end product, which also has a few other features not in the demo (due to several updates.) The author is also the kind of guy to send an 'updated' demo in the mail if you want, and I think that the newer demos aren't as restricted as the one on a.a.u.e. is.

```
==================================
ground-activities are reduced because he has entered. MinT hasn't this
flexible priority handling, has it ?
==================================

Yes it does, it works exactly as you described except that it also allows
you to set a priority, like a base number kinda, so you can force some
programs to have less CPU than you think they should.

You can also change the slicing a bit. In MINT.CNF add the line :
SLICES = 3
You will notice that the forground task gets more time than background ones
by quite a bit, however, I like equal sharing.

I think the main difference between Mag!x and MultiTOS is that Mag!x most
likely avoids the rediculous polling that the AES does, and its likely
highly optimized, whereas MiNT does not replace TOS (in fact I've heard of
MAC users using MiNT!) However, Mag!x cannot be had in the US or many other
places, it does not handle pipes or the powerful forms of BIOS redirection
that MiNT does, or loadable file systems, and I don't think it does signal
handling. MultiTOS is also more or less a standard.

Take your pick, but I have a feeling that if ATARI is still around 5 years
from now, that Mag!x may have a tough time coping with people using pipes
and such in their programs (like drag-ndrop) or my print spooler.

1813. Protablet for the ST

Newsgroup: comp.sys.atari.st
Date: 1993-11-14 23:05:07 UTC
From: jaeck@netcom.com
Message-ID: <jaeckCGI84K.A6C@netcom.com>
Source record: 198485

Does anyone know where I can obtain the latest version of a product
for the ST called Protablet?

My old version won't run on my rainbow system.

I believe it was written by one John DeMar at Quantum Microsystems in
New York. I dont have a phone number for them that works anymore.

Any help would be appreciated. Thanks in advance. Reply to my e-mail.

1814. Atari monitor pinouts?

Newsgroup: comp.sys.atari.st
Date: 1993-11-15 00:12:08 UTC
From: mueller@cs.unc.edu
Message-ID: <2c6hgoINN514@tetra.cs.unc.edu>
Source record: 198487

I'm looking into the possibility of using Atari monitors with non-Atari computers. I believe the monitors in question are the SC1224 and SM124. I know that the SC1224 supports NTSC rates and can be used as an NTSC RGB monitor with the right cabling. I was also wondering if the SM124 can be used as a monochrome VGA monitor. I guessed this ought to be possible since it has twice the vertical resolution of the SC1224 and therefore ought to run at approximately twice the horizontal sync rate, which would correspond to VGA rates (31.5 khz).

In any case, I'd still like to know the pinouts associated with these monitors for the purposes of making the proper cable. I'd guess this is a relatively frequently asked question, but a quick scan of the past 500 articles didn't reveal anything.

Actually, that's 15,000 sold in one year; they weren't available 'til late
'92.

Still, pretty bad. The Jaguar should sell that many in a month.

Hmm, dunno... It might be nice if you uploaded your rz/sz recompile
though... ;-) I think most people that need an ACC that does
background downloads would use STalker 3 or CoNnect or something like
that..

> The original Unix sources aren't that good though. The code uses lots of

Well, that's the code I grabbed from gatekeeper.dec.com, and that's
about the extent of my hopes for it... If I have a functioning brain
when I do the port, it should work with any of the serial ports under
MiNT (I plan to make this a MiNT-only thing, and access u:/dev devices).

I've got mucho work to do for the Info-Zip folks first though...

> other wonderfull BBS program?

This would all depend on whether you were content to let your machine sit around all day running a BBS program and nothing else. Personally, I'd rather run a TOS/TTP program in a window under MiNT, and continue to use my machine for my own purposes.

Fnordadel (source, manuals, and binaries available on atari.archive.umich.edu) works fine, though it seems to be missing zmodem upload/download (though, since source is available, and zmodem source is available, you could add it yourself).

RATsoft isn't even a conforming GEM program as of the latest version, so you couldn't even run it under MultiTOS (in fact, it complains if you attempt to run it and MiNT is loaded); it is a rather nice BBS program though.

No kidding... I'm in the process of getting flamed for saying bad
things about DOS in alt.religion.computers... I mean, really... All I
said was that learning to use your software was much less of a problem
for users than the hellish limitations imposed on them by DOS (this was
in a "/" vs "-" for command-line options discussion).

Somehow they decided that if I used "-" as a command-line option under
DOS I was ignoring the needs of users. Funny, that.

I've finally got ConNect working with my Mega STe and Supra v32bis
faxmodem. Now I have a question that I hope SOMEBODY can answer for
me......

How do I get it to correctly send the PF1, PF2, PF3, & PF4 keys that
are on a vt220/vt320/vt420/etc. keyboard ??? I use a number of pieces
of software on our VAXen that REQUIRE these keys to be useful.

Unlike Uniterm where the (,),/, and * keys on the ST numeric keypad
emulate PF1 thru PF4 I can't seam to figure out how to set up connect
to work with them.

Any ideas ???

From: rrice@netnews.upenn.edu
Message-ID: <162508@netnews.upenn.edu>
Source record: 198489

Ach! The agonies I went through traveling down the same weary road! Never before in the history of human conflict was so much bad advice given in such a short time by so many.

The one thing most people said that turned out to be correct is that on a modern system (Now I run a Mega 4 STE), you can do much better (in most ways...) with Multidesk Deluxe and a horde of accessories. On older hardware, though, the DeskCart was something worth the time and the trouble...

All right--there are four pins holding the plastic housing together, at each corner (I think). The chips are somewhat recessed from the end FURTHEST from the cartrdige card (the end that sticks into the computer). Take something sharp, thin, and strong and pry IN THE MIDDLE of each of the three sides until the housing separates. The circuit board rides over the pins. You have just learned to your horror that the QMI people SOLDERED the old battery in place!! If you understand that sort of thing, de-solder the old battery out, noting which way was "up/positive" for future use. I don't solder, so I used a very sharp pocket knife which traumatized the contact tabs sorely! Worked, though. You can get a new, Lithium battery for the thing at Radio Shack--fortunately, it's a common model. Then you can either solder it back into place (or get someone else to do it) or do what I did, which was to mash the tabs flat and then wedge them (I used a cut-up credit card) firmly against the battery--Most ticklish work, and sometimes the battery slipped!! I'd have to disassemble the thing and repeat the process. I hope you can solder...

That DID work, though. Nice little gadget--made ST Writer a lot better program if you had it. Crashes a lot of modern stuff, though.

From: evanlang@sdf.lonestar.org
Message-ID: <CGIKE8.9vx@sdf.lonestar.org>
Source record: 198377

==========
Could somebody mail me an address for a ftp-site and a filename for
unix-style 'screen' utility program. ('screen' is a program, which allows
you to have different programs running at the same time + allows you to
change between them by a keyboard shortcut. Only one program outputs
on screen at the time. You can also get more screens with another
keyboard shortcut (when you create a new screen, 'screen' returns
you to the shell prompt.))
==========

I was about to say "get TOSWIN", but now that I think of it, I've been booting to SH and leaving out GEM and TOSWIN so I can get C++ to fit into 4MB with MiNT running. Otherwise it gives errors about memory. SO! considering I haven't set up any TERM or TERMCAP stuff for SH (and it always spews off the edge of the screen since line-wrap is off when you boot up) and I let TOSWIN do the TERM/TERMCAP stuff, so less doesn't work without it!

And, I can never seem to make anything stop with ^Z so I can stick it in the background. A utility such as you describe would fix those compile-time sessions when I don't have GEM.

Anyone wanna buy me an 8MB TT with MultiTOS a 200MB hard disk and virtual memory?

If you find that utiltity, lemme know where, email to evanlang@sdf.lonestar.org
I'f I ever come across such I'll let ya know!

Source record: 198493

I would like some cold hard facts, not just just opinions, about the specifications of an ST, Falcon, a clone, an Amigas and ,if possible, a Macs music capabilities. Initially I was going to get a 1040 STe due to the built in midi ports (which is a brilliant idea), and the bloody cheap price (I can get a brand new one for $299 Australian, which is about 120 British pounds or 180 American dollars). Also, not trying to blow the city of Adelaide's trumpet or anything, but there is a a hell of a lot of mus

ic being produced in this city (dance, mainly Detroit type techno), with the majority of it being made on ST's. I was then considering getting a Falcon, but when I found a 486 DX 33 with 4meg ram, a 1 meg video card, Vesa locall buss, modem (need I go on) at the same price ($1999 Australian), I began to get a little jaded with the Atari's, as it got me thinking about their limited availability of other applications (games, business stuff etc), the small amount of RAM available compared to a clone, the lim

ited graphics capabilities compared to a clone or a Mac. I also guess I'm being beguiled by the mass availability of sound cards, cd roms etc. Please don't flame me for thinking this way, but when I do decide on a system, I want something that will be usefull and competitve for a wide variety of applications, but music will be right at the top of the list. Either E-mail me or post an answer to this group about specifications (not just music making abilities but also speeds, max RAM, availability of periphe

rals etc) because I'm sick of opinions, and I would like a list of cold hard facts. Thanks.

P.S. although I'm unsure about what I'll eventually get , I still think 1040 STe's are great machines in their own right. I saw a comparison recently between an Amiga 1200 and a STe, and all of the specifications were identical apart from a few in the STe's favour (dos compatible drives, inbuilt midi ports, safe internal power supply etc), for only $199 compared to $1299 for the amiga. Nuff said.

There would be a few problems with attempting to use a SM124 as a mono VGA monitor. One is the scan rates...the horizontal scan rate of the SM124 is in the neighborhood of 35.5Khz, not the 31.5Khz of 'basic' VGA. Also, the video signal fed to the SM124 is TTL...5 volts or 0 volts, whereas a mono VGA output is around 1 volt peak, and is analog, with 'basic' or VGA giving 64 levels of grey (technically, 62, plus black and white).

> You can't. CIX is a commercial board, and a very good one at that.
>

Well, you can hook up to CIX from a JANET site with "telnet
cix.compulink.co.uk" but you'll still need to pay for using the
account itself.

Is CIX _still_ beta-testing its Internet gateway BTW ?

regards,

Sam.

1831. How do I unpack PAX files?

Newsgroup: comp.sys.atari.st

|> admit.

In this aspect, zoo is very reliable. You can unpack almost everything
from a corrupted archive. There is an utility (fiz) which scans the
archive to search for header and data blocks and gives you the
offsets. Then you can tell zoo to begin extracting at a certain point
in the file, to skip a bad file. This even works if there is a block
missing in the file. E.g.:

zoo x@1234,1345 y.zoo

means "extract from offset 1234 in y.zoo, but pretend this is offset
1345 for interpreting data pointers". Zoo is the most reliable
archiver i know.

1838. Location of MIDI music files

Newsgroup: comp.sys.atari.st
Date: 1993-11-15 11:50:58 UTC
From: ggreenbe@rodan.syr.edu
Message-ID: <1993Nov15.065058.1396@newstand.syr.edu>
Source record: 198402

I was looking to find midi files that could be read/played/manipulated with a sequencer...is there an ftp site that has such files? I was looking for music files...things that could be played through the sequencer while another part is played "live" on a keyboard. If there isn't a place with files like this, is there a way to convert .mod files into .mid files? Or are perhaps .mod files already in a format that sequencers can usually read?

Thanks for any help with this.

Yes - at least two.

The first:

Enable the vt100 keypad mode in the 'Compatibility...' dialog. This will give you the vt100 keypad UniTerm uses, too.

The second:

If you need very special setups for this keys you might want to use a so called scantable. i.e. a table were any keyboard key may be mapped to a sequence of characters that shall be sent, if this key is pressed. To get help about the use and structure of scan tables go to the 'Character Set...' dialog and press the help key once.

Source record: 198414

If you have the NeoDesk CLI you could use the following batch file
to ZIP (or LZH or whatever) each file into its own archive:

```
set path <path of archiver>
echo %first *.* (or *.MOD etc for individual file types)
repeat
set head "%name $item"
set zfile "$head ~ .zip"
zipjr -a $zfile $item
until %not %next
```

I used this to ZIP all the MOD files on my BBS into individually
named ZIP archives.

|> I imagine you're not using the standard green desktop?

That does not depend that much on the desktop (for Calamus 1.09n I have to use
mono-mode) but you should always remember:
Only fine structures have 51.5Hz. The human eye is more flicker-sensitive in a
range of 30 degrees apart from the center - thats why the flickering of the
whole screen is very important. Try 103Hz before you say it's bad - and if you
don't like it all the time you can even switch from within a programm to a
more stable resolution.

Has anyone compiled a list of commercial games that are
compatible (using backward for example) with the Falcon?
Also is there a list of games that have Falcon versions?
(IsharII for example)

I am willing to compile such a list if you want.

e-mail: andrew-atari@minster.york.ac.uk if you have tried
a game and it worked so it was playable. Any
hints on getting that game to work would be appreciated.

For myself - are Populous and Populous II compatible?

Is there a version of the new collection (Ishar/Transarctica/Storm Master)
that is Falcon specific? Was there ever a F030 version of Storm
Master? Is it compatible? Does anyone have the telephone number of
Daze Marketing?

The difference is:

MTOS can only bottom windows which understand the BOTTOMED Message, i.e.
only windows of very new programs.

Mag!X checks if a program can handle BOTTOMED, in this case it acts like
MTOS, otherwise it bottoms the window itself (in a very tricky way to avoid
problems with dialog boxes in windows).

> it back into 50Hz and carried on as before.

I suppose you have a rather old ST. I got the same problem. I found the reason and fixed it. But I don't remember exactly how (my ST is a real mess inside and I don't remember what all the things are for I've put in.) but I think it's an inverter which gives not enough voltage. The inverter has some unused gates so I switched with some wires to another one.

Hmm, but it could also be that this corrected my harddisk problem... I simply don't remember.

The 60Hz swich always occured when I plugged in/out connectors. This is due to static electricity (I have 105V potential difference between HD and ST if not plugged together!!!) and my HD was very happy about that too: it doesn't allow me to write anything now.

Try to connect/disconnect your modem, printer, floppy and see if the Hz-change occurs. In the meanwhile I'll look into my ST to find out what I did.

Bye,
Georges.

1851. Testers Wanted for MiNT-using Desktop

Newsgroup: comp.sys.atari.st
Date: 1993-11-15 16:55:22 UTC
From: sms@sys.uea.ac.uk
Message-ID: <sms-151193163615@cgpq1.sys.uea.ac.uk>
Source record: 198421

As the subject says I'm looking for testers for an alternative desktop which I am writing. I already have a few testers but some have just dropped out due to losing Internet access for various reasons.

The program requires MiNT to run as it uses several processes, pipes and the like, so you will need MiNT to test it (No I won't send you MiNT... you're on your own there).

It will probably also need a hard drive, being realistic. It will hopefully run on floppy-only systems but I wouldn't try it.

As for memory, 1MB may not be enough to use it properly. I only test it myself on an 8MB TT and a MegaST2 so I don't know. I do have a 1MB STM but it's floppy only and I only ever use if for games.

I've been developing this on and off for about a year now so it's reasonably well developed although there's still lots to do and lots to iron out. I'm not just interested in bug-finding, I'm also after comments on how the desktop looks and works as a whole. I'm kind of scavenging for ideas too.

If you are interested, send me an EMAIL describing your Atari setup:
- Machine
- Memory configuration
- Hard drive configuration
- TOS version (and country)
- MiNT version (and perhaps any XFS's you use)
- Software enhancements (NVDI, Warp9 etc)
- Other appropriate hardware (graphics cards etc.)
- Anything else you care to tell me :-)

If you don't have time to be a tester but have some suggestions as to what you would like in a replacement desktop, drop me a line... I'm always open to suggestions...

Thanks in advance,
Steve.

I don't know if you can do it exactly that way or if you have to switch the banks around, but yes you can. However, you have to have a patch that'll fix the memory sensing routines in TOS. Not a major irritant if you have a hard drive, but I suppose it would be if you're booting off floppies. Sorry, I don't know where you can get the patch...I know it was in an ST User a while ago.

1860. WANTED: GDOS fonts for an HP laserjet

Newsgroup: comp.sys.atari.st
Date: 1993-11-15 17:42:51 UTC
From: adw@ukc.ac.uk
Message-ID: <6621@eagle.ukc.ac.uk>
Source record: 198431

Does anyone out there have any GDOS fonts for use with the 300dpi laserjet.sys printer driver that comes with FontGDOS?

If so could let me know (so I won't have to "do it myself").

Thanks,

Lloyd.

P.S: I'm not rich - the printer belongs to my brother... :-)

No, you uncompress them with... gzip! GNU zip (ie, gzip) runs on
practically every computer in use today (except, possibly, the Mac). ST
ZIP 2.30 will only work on zip files (not GNU zip files, which have an
extender of .gz usually)...

1864. IdeaList Registration

Newsgroup: comp.sys.atari.st
Date: 1993-11-15 18:03:31 UTC
From: lpzssm@unicorn.nott.ac.uk
Message-ID: <2c8g9j$dcs@unicorn.ccc.nottingham.ac.uk>
Source record: 198425

This is a repeat of a message I sent round earlier - note the deadline
is the END OF NOVEMBER.

regards,

Sam

IDEALIST

REGISTRATION OFFER

As an incentive to get people to register IdeaList I'm organizing
(with the author's approval) a group UK registration - no need to
worry about converting currencies, money order expense etc. For the
unconverted, a brief description of IdeaList appears at the end of
this.

HOW IT WORKS

The UK registration fee is 9 pounds. All registrations sent to me by
the end of November will be converted to DM and sent to the Christoph
(the author). You will then be sent the latest English version of
IdeaList and supporting programs (such as IdeaBook), and be notified
of future upgrades.

IdeaList 3.4 should be ready by then and will include:

- RTF import so you can print out files from most PC word-processors,
as well as Atari-Works.
- Foot-line printing - add your own foot-line to the printout of any
text file with directly-selectable text attributes.
- Import of First Word Plus head/foot lines
- Read ASCII lists for batch-printing with the printer-queue facility
- Enhanced interface with window-based dialogues (open several at
once) and optional "dialogues at mouse position".
- revised English manual

Please make cheques payable to Sam Marshall and send them to:

Malgrat
Manor Park
Ruddington
Nottingham
NG11 6DS

Don't forget to include your own address ! If you include an e-mail
I'll acknowledge receipt immediately. Otherwise, please allow until

mid-December to hear from Cristoph.

IDEALIST DESCRIPTION

IdeaList is a comprehensive printing utility. It can output ASCII and First Word (Plus) files in up to 9 columns with proper formatting, add its own headers, print in batches, reverse order, odd/even pages only etc (anything you'd expect from a top WP's printing facilities). Drivers are provided for a huge range of printers, including Epson FX, Star 9 & 24 pin, SLM, Deskjets (several including landscape), BJ10 etc. Drivers can be modified to include font-downloading and other printer-specific text-attribute control. Output can be re-directed to a file containing embeded printer codes and printed later from the desktop (or even on a PC).

The interface is very well done, with page-preview modes, keyboard shortcuts and preference options for just about everything.

The accessory version is almost as fully-featured and also offers background printing so you can run another application whilst IdeaList does its stuff even on a normal ST.

See last month's ST Review and ST Applications for more information (Review said it was one of the best pieces of shareware they'd seen). Even better, take a look at the real thing -

ftp from src.doc.ic.ac.uk
/computing/systems/atari/uni-paderborn/tools/printer/ideal321.lzh

Also available from Floppyshop and the ST Club.

I'll be happy to answer any questions by e-mail

>doing. I e-mailed him, but the message must of gotten chewed, so I was
>wondering if anyone else had some information on it.
>

As the author - I must state that this is NOT a port of a program, it's an original production all my own (with a little help here & there).

Also, it's not just a Falcon program, although it supports the TOS4.x GUI (as well as older ones via seperate resources - more programs should do this as it doesn't take that much effort to include 2 RSC's), and extended screen modes.

CLAv2 is still in beta test, and will be for a couple of weeks minimum yet.

Anyone wanting ECAD before then should check out Galaxy CAD. It's PD. It's a port from Unix/Mac. It's REALLY powerful. And it's a pig to use....but it is very potent if you stick with it (it took me 2 years to work out how to do buses - perhaps I should have bought the manual....).

I don't know if there's a source of fonts in resolutions like that...I
asked, and didn't get an answer. You could try looking for 180 dpi fonts
(standard lo rez 24 pin printer fonts, and use them. You just won't be
able to get as big point sizes, since the point sizes will be scaled down
by a factor of 5/3. If you do find some, could you post where you found
them, or mail me?
: P.S: I'm not rich - the printer belongs to my brother...
More's the pity, right? :-)

^^^^^^^^^^^^^^^^^^^^^^^^^^

No, I won't sue your friend but it continually amazes me how such individuals
can be so callous as to publicly admit that they are a THIEF as if it's a fact
that they should be proud of.

The Atari computer industry is in serious trouble and while I won't go so far
as to say piracy is the chief cause, it certainly is a big factor.

Yessir, reading posts like this one sure makes me want to continue supporting
the Atari user.... NOT! You may have just posted this for a friend, but doing
so puts you in the same pirate/thief/criminal category, IMHO.

My apologies to the legitimate Atari users on the net (yes, there ARE some left).

There is no contest here... GEnie provides the most online support for the Atari. Delphi is much improved over recent years and CIS has become nothing more than a gossipy mouthpiece for ST Reports (and very unprofessional, IMHO). Delphi offers good rates, CIS is *still* too expensive and GEnie is still a very good value, particularly for Atarians. And GEnie's proprietary (but free) software, Aladdin, is one of the best I've used on any platform. Only wish it was Falcon compatible.

Your mileage may differ but I've been a happy user of GEnie for years.

Gee, why mess around with the magazine articles when you can buy the whole series in a revised, corrected and enhanced form _with_ disk direct from the author, Clay Walnum, at Taylor Ridge Books, (203) 643-9673. It's only $29.95 + $3 shipping but double-check because I think he has a sale going on.

Hey, he offers a great book+disk for GFA BASIC users, as well. :)

: William Magro (wmagro@baron.ncsa.uiuc.edu) wrote:
: : Ftp to a mac site and download the deskjet drivers by Ollie Arnxxx and
: : another guy, whose name I remember even less. It is at version 3.0
: : and works with almost all software. You can search for it in archie
: : using DJ3.0 as a search pattern I believe. If you get really desperate
: : and can't find it, mail me. I will point you to a site.

: O.K.,
: I *GOT* the file at last,
: *CONVERTED* it from atari to mac (luckily I got StuffIt),
: *INSTALLED* it in the system folder (system 6.0.5) and...

: it doesn't work!!

The symptoms are consistent with the old DJ/Atari power on problem.
Make sure that you turn the printer on before (or possibly at the same
time as) the computer.

Also check that you have selected the printer with the chooser and
do a page setup. Occasionally, I get the no printing problem. Simply
unplugging the parallel cable and replugging seems to do the trick.
Finally, check your spectre setup screen and make sure that it isn't
mapping the printer port to the serial port. There is a setting where
it does this. Turn on your modem to see if that is where the data is going.

Good luck.

Cross-posted to: pdaxcess.forsale.computers,pdx.forsale,or.forsale,pnw.forsale,comp.sys.atari.st,misc.forsale.computers.other

I have the following Atari ST hardware and software for sale.
Hardware

Atari 1040STf Computer with 1MB RAM, internal 720K 3.5" drive
Future GTS-100X 720K DS/DD External 3'5" Drive

Software

Deep Space
Drakkhen
Fiendish Freddy's Big Top O' Fun
Heroes of the Lance
Karate Kid Part II
Lancelot
A Mind Forever Voyaging
Moebius: The Orb of Celestial Harmony
Phantasie I
Prime Time
Renegade
Rings of Zilfin
Silicon Dreams
Star Trek: The Rebel Universe
World Games
World Karate Championship

If you are interested in any of these, or have any questions about any of
the hardware or software, please email me at griffin@teleport.com. Please,
reasonable offers only. Thank you.

1881. Atari 1040STf and MORE for sale

Newsgroup: comp.sys.atari.st
Date: 1993-11-16 00:57:19 UTC
From: eggert@sun.lclark.edu
Message-ID: <1993Nov16.005719.2252@lclark.edu>
Source record: 198449

I still have the following items for sale: $125 Takes all.

Atari 1040 STf -
1 meg RAM
with Atari mouse
Atari SC1224 -
Screen bows at top and bottom. This is
apparently due to a burned out capacitor.
Should be an easy fix.

Software -
Laser C compiler
Laser C Debugger package
Quantum Paint
BBS Express! ST
Falcon Flight Simulator
Bloodwych
Chrono Quest
Carrier Command
Gone Fishin'

Again, all of this could be had for $125 buyer pays shipping. I will ship c.o.d. if desired, but I ask that the buyer pays for that ahead of time (I got royally screwed on a previous deal that ALL of this was supposed to go with).

Evan Langlois (evanlang@sdf.lonestar.org) wrote:
> Can someone tell me EXACTLY what these programs do, how they do it, and
> where I can get docs and source for them.

Mickey Boyd answered the last Q's, so I'll answer the first.

grep

Global Regular Expression Print. Allows even the novice user to
make complex searches for text in ASCII files. For example:

grep cat pets.doc

prints all the lines in pets.doc which contain "cat". To restrict
this to seprarate words, use:

grep '\<cat\>' pets.doc

For the experienced user, grep can also use regular expressions,
for example to find all lines where "cat" and "dog" appear on the
same line, in that order, use:

grep '\<cat\>.*\<dog\>' pets.doc

sed

Stream EDitor. Allows you to make very complex edit to a file using
a script of edits. For example, if you want to swap every occurance
of the word "dog" to "cat", while not changing "catalog" to "dogalog",
you could use:

sed -e 's/\<cat\>/XCATX/g' -e 's/\<dog\>/cat/g' -e 's/XCATX/dog/g'

It is not for the feint-hearted, but an extremely powerful tool for
the experienced user.

awk

Aho Weinberger Kerninghan program. Combining the power of grep
and sed, plus a power processing language. For example:

Add up first column, print sum and average:

```
{ s += $1 }
END { print "sum is", s, " average is", s/NR }
```

1883. .GL or .DL viewers converters?

Newsgroup: comp.sys.atari.st
Date: 1993-11-16 01:36:46 UTC
From: awest@ub.d.umn.edu
Message-ID: <2c9are$dmr@ub.d.umn.edu>
Source record: 198353

Just as the title says...are there any programs that can view .DL or .GL animations on a stock 1040ST? Or are there any that convert to animatic (.SEQ) form?

Thanks

From: awest@ub.d.umn.edu
Message-ID: <2c9b37$dvu@ub.d.umn.edu>
Source record: 198354

As long as I am in the question asking mood...

I have recently inherited STalker 2.06 from a friend who trashed his ST...:-(Anyhow...is there a way to change the font? I found an ANSICOLR.FNT somewhere (I forget now...perhaps the author can come and yell at me...) that said it was for STalker...but I can't find a way to change the font! Now my screen is 20x76 or so and a bit frustrating...oh well...

Thanks again...

Hey, I am a legitimite user! I simply posted something for a friend. I am
not in any way trying to support his piracy, nor am I gaining anything
through the sale of his equipment. It's simply a fact, he's got a lot of
disks, mainly old games that can't even be found for sale any more. I've
seen what piracy has done to the ST and I'm really sorry for it too...

I have one main question. Why? Does our Mr.S have such a dull and
absolutely undesirable life that he must sit in the forum of a computer
he obviously hates just so he can take cheap shots? I don't sit in the
Mac or WinNT forums, but I see Mac people here, and WinNT people in the
OS/2 forum. (Okay, so I made one net.booboo by bringing in another
computer system. So.Sorry)

Are these people _really_ that boring?

Just a thought.

Why don't you grab a copy of it from another platform, the atari one
is shit. It doesn't even have a way of limiting the packet size.
If your host site defines something absolutly huge, you'll be stuck
using it. Imagine a 6k acknologement after every packet?
I was stuck with something like that for a while using a 2400bps modem,
thank god they reduced it to 1k. (limiting it to 64bytes sucks for
high speed modems, so they raised the number so sites could choose
themselves here ... unfortunatly I couldn't :-( )

RATSoft Swedish Support mode ON:

RATSoft is 110% GEM/TOS compatible.

The reason RATSoft complains when ran under MultiTOS is only because MultiTOS v1.04 is too slow to run a BBS program (and highspeed modems) at the same time as anything else, the author is adding Geneva compatibility though, and he'll add MultiTOS when/if it becomes fast enough.

I use TapeBIOS and gtar with my QIC tape and ST. This software, though, expects to see an ACSI to SCSI converter. A colleague at JET, who has a TT, has done some work on the drivers, and may have a version that talks direct SCSI (and therefore may be of use on the Falcon). Contact dba@jet.uk

>Where's it gone ?

Hmm. For some reason, Atari removed this option from the CPX in all recent versions (older versions of the General CPX it still appears). Apparently it's to do with the _MCH cookie, and the option only appears for a TT nowadays.....

Use BACKWARDS or one of the other ST compatibility progs. to turn off the cache if you need to.

Craig.

You shouldn't need to turn off the cache except for games. In this case you
should use Backwards which does that and much more - available on umich I imagine.

|>
|> MultiTOS
|> --------
|> Back to the old manual, why can't I run accessories(.ACC) from the desktop ?
I think you need to add something manually to newdesk.inf. Someone else probably
knows the exact line.

The ST reads & writes standard 720K MSDOS disks with no problems. TTs and Falcons do the same with 1.44Mb ones.

1906. Re: BEGINNER MODEM questions- HELP!

Newsgroup: comp.sys.atari.st
Date: 1993-11-16 11:04:40 UTC
From: S.P.Taylor@bradford.ac.uk
Message-ID: <1993Nov16.110440.4961@bradford.ac.uk>
Source record: 198208

Hallvard Tangeres (hallvart@ifi.uio.no) wrote:

: I'm thinking about getting hold of a modem, but I don't know much about them,
: so I was hoping someone else could help with advice...

: I can connect to the university via modem. They have UNIX terminals at the
: university, and I would like to use the computer in as much the same way as
: we use the terminals there (if possible). In worst case, just using my ST at
: home to email, "talk" and download files....

: What kind of modem do I need and what kind of software should I use?

Main Point is it should be Asynchronous, and Hayes compatible. Also, your
Uni _may_ only support a certain Baud Rate - ours only supports 9600.
Software-wise, I use UniTerm all the time, but any VT-100 terminal
emulator will do it, just not as well. I suppose you can expect lots of
recommendations for ConNect, as it appears to have a huge following.

: Can I get multiple windows like in "X-windows" on a UNIX machine?

Generally, no, although I recenlty heard that this is theoretically possible
You would normally just operate in line-mode unix, on a VT100 terminal emu-
lator.

: I understand that a quicker modem will be better, but more expensive, but
: will this have any affect when I connect to the university's system
: and use that machine to connect to other people elsewhere, or downloading
: files?

It will not speed up filetransfer between your University, and the place it
is in contact with, but it will speed up transfers to your ST from the Uni.

: Can I download files directly to my ST at home, or do I have to go
: back to the university to get the files that are downloaded there on disk
: to bring home to my ST?

This can be done, and I do it all the time. You need to use C-Kermit on the
Unix machine and Kermit File Transfer in Uniterm (or whatever you are using)
Even after the recent conversation I had regarding the speed of Kermit
transfers, I still transfer most of my stuff by taking floppies to the
Computer Centre and Using RapidFiler under Windoze. If you are not far from
the university, this is definately the cheaper (and probably quicker) option.

: What modems are good and what do they cost, and what software should I use?
: Any PD/shareware?

I answered this one above, methinks.

: I have an Atari 520STE with 2MB RAM, TOS 2.06 and a single 720K disk drive.
: (I don't have any hard disk yet). I also have an NEC Multisync II monitor
: so I can use all modes (But mostly I use monochrome, so I'd prefer to use
: the modem in that mode too.

Yep. That's not a problem. ConNect likes Hi-Rez I believe.

: By the way, I'm going to Singapore, Malaysia and Hong Kong in December, so
: maybe I could get hold of a cheap modem there. Are all modem standards the
: same, or do they differ from where you live in the world, according to the
: telephone systems etc? I need to use mine here, in Norway.

This might be possible, although I don't know anything about Norwegian
Telecom Standards.

: Hallvard Tangeraas, Oslo, Norway

|>
|> Steve Taylor. |||
|> Long Live / | \, if they don't shoot themselves in the foot.
|>

Dear Steve,
and others with same troubles !

As you have already noticed, there are some files called *.pax. These files _are_ packed, but you also should have noticed, that there might be a file called somewaht like install.app or install.prg.
Thuis file you should also download. This _IS_ the depacking programme for that kind of *.pax files.
After running your installation programme you will be asked for the destination folder, where you
wish GemView to be installed.

That&#65533;s all !!

1909. Hard Drives and ICD Link

Newsgroup: comp.sys.atari.st
Date: 1993-11-16 11:35:49 UTC
From: vctec@westminster.ac.uk
Message-ID: <CGL1Jp.CyB@westminster.ac.uk>
Source record: 198371
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Dear Atari netters,

Please, please please help me.

I am now in the process of building my hard drive, and have bought ICD The Link.

Recently at a computer market, I bought a 85Mb Quantum ELS Prodrive. This did not work with the Link, as it was not recognised. However, an engineer told me that it was not recognised because parity on the drive had to be disables....which he did using ICD ADSCSI board. He did that, then the drive worked, the only problem being that there was some sticktion (is that the right word) on the drive, where when booted it clicked for a few seconds before whirring. I was told that the drive would just get worse until it just would not work.

I returned the drive to the person/company from whom I bought it, and got my money back. He did not have any more SCSI's in stock, but told me he'd find me on, and gave me my money back.

My question to you enlightened lot is what SCSI drives do I look out for that will work with the Link? (Model and number)

Which Drives definitely work with the Link? (Segate, Maxtor, Quantum, Conner)

Which drives have a parity on/off switch instaed of going through software?

How do I go about switching off parity if I get another one of these Quantums?

Anyone selling a cheap SCSI mechanism that will work with the Link? (at least 85 Mb, preferably 100, 3.5" 1" height or half height). I will go to a maximum of 120 UKpounds for a good sized drive. The last Quantum cost me 80 pounds!

Thanx for your help.

But none dealing with multitasking, i.e. preempting a program, and I
think that was the point. (If you'd be so kind and forget about the
accessories...)

>
>- Rahin
> (rahin@scs.leeds.ac.uk)
>
>

It is supposed to be possible to have 2.5Mb in a STe, using a patch program available in the PD...there are a couple of them..I think one of them being given away on one of the monthly mag cover disks.

They go in like:

connector end of STe

256K
1 Mb
256K
1 Mb
front of STe (ie, keyboard end)

Although I have tried this, and used the patch programs, it did not work. I do not know why. Maybe, because I upgraded to TOS 2.06.

Anyone, any ideas?

Danny

Take the connector of one of those devices off, the touch the two connectors
again slightly. There should be a static discharge and a jump to 60Hz.
I DON'T GUARANTEE THAT THIS WON'T HARM YOUR HARDWARE !!!

> : In the meanwhile I'll look into my ST to find out what I did.

1930. BEGINNER MODEM questions- HELP!

Newsgroup: comp.sys.atari.st
Date: 1993-11-16 17:11:34 UTC
From: hallvart@ifi.uio.no
Message-ID: <2cb1k6$c02@kolsaas.ifi.uio.no>
Source record: 198399

I'm thinking about getting hold of a modem, but I don't know much about them, so I was hoping someone else could help with advice...

I can connect to the university via modem. They have UNIX terminals at the university, and I would like to use the computer in as much the same way as we use the terminals there (if possible). In worst case, just using my ST at home to email, "talk" and download files....

What kind of modem do I need and what kind of software should I use?
Can I get multiple windows like in "X-windows" on a UNIX machine?
I understand that a quicker modem will be better, but more expensive, but will this have any affect when I connect to the university's system and use that machine to connect to other people elsewhere, or downloading files? Can I download files directly to my ST at home, or do I have to go back to the university to get the files that are downloaded there on disk to bring home to my ST?

What modems are good and what do they cost, and what software should I use? Any PD/shareware?

I have an Atari 520STE with 2MB RAM, TOS 2.06 and a single 720K disk drive. (I don't have any hard disk yet). I also have an NEC Multisync II monitor so I can use all modes (But mostly I use monochrome, so I'd prefer to use the modem in that mode too.

By the way, I'm going to Singapore, Malaysia and Hong Kong in December, so maybe I could get hold of a cheap modem there. Are all modem standards the same, or do they differ from where you live in the world, according to the telephone systems etc? I need to use mine here, in Norway.

Many silly questions which may seem obvious to a lot of you, but I don't know where else to turn.
Any help will be greatly appreciated. Thanks!

Hallvard Tangeraas, Oslo, Norway

: Does anyone know where I can get it (PD or shareware) ?

: Thanks !

I don't actually think you deserve answering, using the anon service for such a simple question. You are probably the quy who posted the previous thread (i.e. Cracking Cubase), hoping that someone will give you a copy of a commercial package.

But I will any way!

There is a German Program (i.e. in German) called Soundmachine ST, which is shareware. The only place I am sure you will get a copy is The ST Club, 2 Broadway, Nottingham, NG1 1PS, ENGLAND, on disk PDE.48. Although I am sure it must be available elsewhere.
There are also trackers, such as TCB-Tracker, along with many others, which are also at PDL's everywhere.

I think pl39 is on atari.archive.umich.edu:/atari/Mint/Lib...

> What's a good (and SMALL) version of MicroEmacs to get? Is there anything
> friendlier that I might want to try?

MicroEMACS 3.11 is on atari.archive.umich.edu:/atari/Editors (might be in an
Me directory). There's also JOVE and Mutt2...

> Can someone tell me about Curses? I mean specifically how to use them with
> TERMCAP strings and such so I can write software that can use any terminal
> type?

I think there should be some curses documentation laying around... I
got mine from the curses library for the OS/2 version of GNU C/C++.

> Is there a termcap based window library?

Yes, curses. :-) Oh, you meant a GEM windowing library... I hope to
start work on a GEM version of curses in the next couple of weeks, but
it might take a while (I don't have much spare time).

> My G++ library didn't have the delete function in it (the compiled form of

I thought delete was a standard C++ keyword?

> Does anyone have/use Objective C?

Lots of NeXT users do... ;-)

> Does anyone have a list of the functions/objects available in G++ library
> and how to use them? My C++ manual doesn't go into much about iostreams
> and standard functions other than how to do the basics and how to overload
> your own functions and put your objects into the iostream. It gets into the

> a manual (bad assumption).

If you grab the G++ library source code (from any GNU ftp site), there's
a texinfo document describing the library in detail... If I remember, I
might upload a PostScript and an ASCII version to atari.archive (but

don't count on it... mind like a sieve!).

> Where are the GCC/G++ manuals? I want ASCII, how do I get it? Or, if ASCII
> is not available, how much hard disk space do I have to waste in other programs
> just to read some docs?

What do you want/need to know?

I don't know... But I DO know that 2.5 MB RAM in an STE is possible. You only
need a tiny patch-program, otherwise the OS will think that you have got 4 MB.
If it doesn't work the way you have described, try the other way around!
(Bank 0 = 2*1MB, Bank 1 = 2*256k).

: preferred) to an Atari 1040 STE. If yes how ? Directly to the hard disk drive
: connector of the machine ? Are they external disks sold by Atari or third
: parties ?

Generally, you cannot connect an IDE drive to an ST (although you can with a Falcon!) but a SCSI drive is the normal one to use. All you need (apart from Power Supply, Fan, Case etc.) is a DMA-SCSI Host adaptor, such as the ICD Link (@ 70UKP), the ICD AdScsi (@ 75 UKP), or any other make. ST specific drives , where all ofg this is pre-assembled for you, are selling relatively cheaply now, but I'll let someone from the US tell you where from and for how much.

If you are interested in buying a Host Adaptor (this goes for anyone), I have a friend who no longer needs his PROTAR PROGATE host adaptor, due to buying a Falcon. He is looking at a price of about 40 UKP, and this includes all leads for connecion to the ST and the IDC port of the SCSI bare drive mechanism.

E-mail me if you are interested.

Actually, my version of Speedo GDOS does have a driver for SLM's. It is true, however, that a an adaptor to allow a SLM to be connected to a SCSI bus has not been developed yet (or at least I haven't heard of it).

>practically every computer in use today (except, possibly, the Mac). ST
>ZIP 2.30 will only work on zip files (not GNU zip files, which have an
>extender of .gz usually)...

To clarify this a little more (if I don't screw it up):

GNU-ZIP is available on most platforms and will uncompress .gz (gnuzipped)
and .Z (compressed) files...

ST-ZIP is the ST version of ZIP (***NOT GNUZIP***) that is basically
compatible with PKZIP on the PC's, InfoZIP (unix,etc), etc...

ZIP and GNUZIP are *not* compatible (and it's a shame that they
had to name them so close together)...

However, versions of ZIP and GNUZIP do exist for the ST, as well
as other platforms...

1940. 2nd CFV: rec.autos.simulators

Newsgroup: comp.sys.atari.st
Date: 1993-11-16 19:22:23 UTC
From: rdippold@qualcomm.com
Message-ID: <rec.autos.simulators-CFV2@uunet.uu.net>
Source record: 198209
Cross-posted to: news.announce.newgroups,news.groups,rec.autos,rec.autos.driving,rec.autos.sport,comp.sys.amiga.games,comp.sys.atari.st,comp.sys.ibm.pc.games.misc,comp.sys.mac.misc,comp.sys.mac.games

LAST CALL FOR VOTES (of 2)
unmoderated group rec.autos.simulators

Newsgroups line:
rec.autos.simulators Discussion of automotive simulators.

Votes must be recieved by 23:59:59 UTC, 27 November 1993.

After the CFV appears in news.announce.newgroups it will be posted by the proponent to the World Circuit, Formula 1 Grand Prix mailing list <wcf1gp@divsun.unige.ch>.

This vote is being conducted by a neutral third party. For voting questions only contact rdippold@qualcomm.com. For questions about the proposed group contact Afzal Ballim <afzal@divsun.unige.ch>.

CHARTER

This newsgroup will be used for discussions of realistic computer simulations of automotive vehicles, irrespective of the platforms on which said simulations are supported. This will include simulations which have a competitive component (racing simulations) and those which do not. Topics will include (but are not restricted to):

o Global characteristics of particular simulations.

o Platform-dependent characteristics of such simulations (as a convention, it is suggested that such discussions list the platforms in the subject header, e.g.,

Subject: [ibm-pc,sun] Blog's Yugo simulator

o Design and implementation issues of such simulations.

o Issues of realism in automotive simulation.

o General discussion of automobile simulations.

Obviously, determining whether a particular simulator is "realistic" requires a judgement call. It is hoped that broad accord between posters will enable the discernment of valid simulators (for discussion in this group) from those which are devised for an entertainment value without concern for realism. Thus, discussion of many of the arcade racing simulators, which provide an overview perspective of the vehicle being simulated and which do not attempt to provide realism of handling of the vehicle, would not be appropriate

in this newsgroup. On the other hand, simulators such as Microprose's Formula 1 Grand Prix would fall within the purview of this group as attempts are made to capture realistic handling of the vehicle.

FAQ Outline

A preliminary FAQ is in preparation for the eventuality that the group passes the vote. The current outline is included here:

FREQUENTLY ASKED QUESTIONS for rec.autos.simulators
Written by Afzal Ballim

Version: 0.0
Last Update: 26/10/1993
If you think of questions that are appropriate for this FAQ, or would like to improve an answer, please send email to afzal@divsun.unige.ch

Topics Covered:
==========

Part 1:
[1-0] What is the purpose of this newsgroup?
[1-1] What conventions are suggested for subject headings?
[1-2] How do I decide if a simulator is "realistic"?
[1-3] Does discussion on arcade racing games belong here?

Part 2:
[2-0] What realistic racing simulators exist?
[2-1] What platforms support them?
[2-2] What add-ons, editors, updates, etc., exist for these simulators?
[2-3] Where can I find them?

Part 3:
[3-0] What realistic NON-competitive simulators exists?
[3-1] Where do I start if I want to build a simulator?
[3-2] How do I model <X> in an automotive simulator?

STANDARD VOTING INFO

You should send MAIL (posts to a group are invalid) to voting@qualcomm.com
(just replying by MAIL to this message should work). Your mail message should contain one and only one of the following statements:

I vote YES on rec.autos.simulators
I vote NO on rec.autos.simulators

Anything else may be rejected by the automatic vote counting program. You may ABSTAIN in place of YES or NO - abstain votes do not affect the vote outcome. You may change your vote later by voting again. The votetaker will respond to received ballots with mail acks. Addresses and votes of all voters will be published in the vote results. If you wish to remove your vote and all indication that you have voted from the

final list, send a vote with CANCEL in the place of YES/NO/ABSTAIN.

Standard Guidelines for voting apply. One vote per person, no more
than one vote per account. 100 more YES votes than NO votes and twice
as many YES votes as NO votes are the requirements for group creation.

rec.autos.simulators group vote Bounce Ack List - no need to revote

Your friend is a criminal, and you are an idiot. Irresponsible use of
Internet resources will hasten the demise of the Usenet News system as we
know it. You are responsible for your post. Your post promotes an illegal
activity (that of transfering stolen property). You did it on the Internet,
on thousands of machines. You broke the rules. You really showed your ass.

In the past, I have deleted accounts on my machines due to such infractions.
I intend to advise your system admin to do the same in your case. It appears
that you truely don't understand your responsiblity in this matter, but
perhaps your system staff can educate you.

|>the moment, now that the SM144 is dead?
|>Also, what about buying a second hand Sm144? A good move?
|>
|>Del
|>

I'm also in the same position. Looking to get a hi res monitor in the UK.
In fact the cash is starting to metaphorically burn a hole in my pocket!

I have been looking at 2nd hand but basically noone wants to sell JUST the
SM124/144, they also want to get rid of the atari (1040, ste, whatever)
AS well (what use is a box with no monitor). And I can't really justify the
extra cash (I already have SFTFM with 2.5mb).

Reading the latest STFormat a few firms are now supplying mono monitors.
I made a post a few weeks ago about the best options but didn't get much
feedback. Ladbroke computing are selling mono SVGA monitors with an adaptor
which they claim lets it run on a ST, but I want to SEE the monitor first.
At least one replacement I saw (I think a converted VGA) looked horrible,
blurred etc. I am also worried about:

(1) aspect ratio of screen pixels
(2) Phosphor color (I want my Notator to be in black and white!)

Anyone else got any relevant info? Like what h/w one needs to get a mono
SVGA working on a STFM?

Its for the Jag. id has already made a SNES version of Wolf3d. They
were going to do Doom for it but SNES restrictions on violents
would have altered the game.

Hmmm, well I don't know of any Taipan "II", but I do have Taipan (the original)
which is just like the original Apple][game... And my version is shareware,
so stop worrying!

I have it right here in my account, just drop me a line if you want it....
Aha, but there's a catch! It's in GFA basic!!! So you'll need gfabasro.prg
to run the silly thing... If you DO have the gfa basic runner, I want it!! :)
(My version is too high for the game... :( )
OR if you manage to compile it, I'd like a copy too!! :)

Boy aren't I a pig!!

1953. Toronto Atari Federation Flea Market 93-11-18 @ 19:30

Newsgroup: comp.sys.atari.st
Date: 1993-11-16 23:13:48 UTC
From: muttooi@wm-mercer.ca
Message-ID: <CGLxv0.ELu@wm-mercer.ca>
Source record: 198227

Remember to come out to the Toronto Atari Federation's Flea Market on Thursday November 18 at 7:30 pm. With TAF's over three hundred members, the Flea Market promises to have lots of STuff to buy and sell, and lots of people (with lots of money of course).

TAF meets in the Memorial Hall at the North York City Centre, at 5110 Yonge Street (at Park Home). It is on Yonge Street, North of Highway 401.

TAF welcomes non members to attend. $2 will be charged at the door.

If you'd like to use a half table to display and sell your used equipment and original software, it will cost $5. Please come a little early (around 7:00) to set up.

Admission and table rental is FREE to TAF members.

Remember to pick up a copy of the November, 1993 issue of TAF's Phoenix newsletter for $2.50. It features an interesting discussion on the "state of Atari dealers in Canada", an in depth look at someone's MIDI setup, a comparison of MultiTOS and Geneva, and much more. Back issues of TAF's special 18 page Falcon issue will be available for $1.

TAF has a large public domain Library. If there's something you've been looking for, ask our Librarian, and he'll try his best to find it for you.

If you'd like to join TAF, our membership chairman will be glad to take your $30. In return you'll receive a one year TAF membership which includes 10 issues (September through June) of our Phoenix newsletter mailed to your door, admission to meetings, access to PD Library, access to TAF-presented seminars, and much more!

For more information, call the TAF Info-Line at (416) CALL-TAF.

You should be able to find the GNU versions anywhere that find GNU
software is stored...

Why exactly would you want to include one though? It would be much,
much easier to simply include Regular Expression matching (if that's
what you want); I think there's a regex library on
atari.archive.umich.edu...

awk and sed would probably be major overkill, don't you think?
grep/egrep/fgrep are for searching... You can search for almost any
conceivable pattern of characters. sed is a "Stream EDitor", which lets
you search for anything grep can find, and replace it and/or edit it or
delete it or... sed has lots of functions. awk is even more arcane
(I've never gotten the hand of it) than sed, and has many more search
and replace kinds of features... You can do nifty things with it you; I
think I have an awk script to convert normal text into Elmer Fudd
speak... ;-)

There's a word processor on the Macs (called "Nisus" I think) that has
regular expression matching in it...

Maybe because some people in this world are too cheap to be honest.
I suppose they see others do illegal things and take it to be "right"
because others are doing it. It's not right, it's cowardice, hiding
behind the "in thing" in their little niche...

Maybe someday they will be ripped off themselves, and *maybe*
they'll understand. Nah, probably not...

Oh well, I suppose this thread had to reappear again (since the Sinclair
thread was getting stale ;-)

1962. Atari in Popular Science

Newsgroup: comp.sys.atari.st
Date: 1993-11-17 03:53:09 UTC
From: klasmekj@ucunix.san.uc.edu
Message-ID: <2cc775$g3j@ucunix.san.uc.edu>
Source record: 198233

There is was on page 102 of the latest Popular Science: "Can Atari K-O 3DO"

December 1993 issue.

It is basically an article about the 3DO. There was also an advertisment on page 16 and 17.

The article kind of impressed me. I wasn't expecting them to have Atari anywhere...mostly because they have not yet released the Jaguar nationwide. It is a 1/2 page article. It basically introduced what the Jag was. It highlighted that the Jag was built around a Motorola 68000, but they did say it was a 64 bit multimedia machine that claims to be better and/or cheaper than the existing 16-bit Sega Genesis and Super Nintendo ES or 3DO's 32 bit system.

The article seems to be written by a reporter who has be won over by Panasonic's 3DO, but hey, that is the media for you: they are all bias. It talked about how Atari never seemed to make it. How they failed in the early 80's and has yet to make it back. She compaired Atari to a rock group that once dominated the charts but hasn't cracked the top 40 in years.

It also explained the failures of the ST line...now the Falcon. How Nintendo and Genesis have taken over the game market and how Amiga has created a nich in the video market.

They said that Time-Warner has a stake in the Jaguar, and ALSO the 3DO.

All in all I am very happy that Atari got it's name in there. The 3DO is the feature story in the magazine with a HUGE picture and full color graphics showing the guts of the machine. The 3DO dominates the contents page.

Good Luck Atari.....hopefully we can compair Atari to the Moody Blues: The rock group that has once dominated the charts and did so again....

From: dwallace@wam.umd.edu
Message-ID: <2ccd9p$lfv@cville-srv.wam.umd.edu>
Source record: 198236

If it's exactly 32000 bytes, there are a couple of things you could do to look at it. The easiest probably would be to do the following (here in GFA Basic).

```
Open "I",#1,"picture.dat"
Bget #1,Xbios(2),32000
```

Or, you could go into a program like EdHak and stick the 34 bytes at the beginning of the file which would fool other programs into thinking it was a .pi1 picture... The first two bytes determine the resolution (I forget exactly how it works), while the pallette data is held in the 32 bytes before the picture starts. All things considered, the first method is a lot easier, though you're going to have to set the colours manually in any case.

1965. Re: ST vs Mac in the Worl

Newsgroup: comp.sys.atari.st
Date: 1993-11-17 05:59:59 UTC
From: Lonnie McClure <LMCCLURE@delphi.com>
Message-ID: <931117.03599.LMCCLURE@delphi.com>
Source record: 198235

"I saw a comparison recently between an Amiga 1200 and a STe,
and all of the specifications were identical apart from a few
in the STe's favour (dos compatible drives, inbuilt midi
ports, safe internal power supply etc), for only $199 compared
to $1299 for the amiga."

Uh, I think you were either comparing an A500 to an STe, or an A1200 to
a Falcon030, or you missed a few things in the A1200's favor. <grin>

For one, the A1200 has a 32-bit data path to memory, and a 68EC020
processor running at over 14Mhz vs. the STe's 8Mhz 16-bit 68000. With only
the 2meg it comes with, it is about 2-2.5x faster in CPU operations. Add
a bit of additional ("fast") RAM, and that jumps to about 5x. Also,
considering it can do 256 colors out of 16.8 million at up to 640x480
non-interlaced (and 1280x512 interlaced PAL) even before overscanning,
vs. the STe's normal 16 colors out of 4096 at 320x200, or mono at 640x400,
I think you could say it has an edge in graphics. (This is without even
going into HAM8 mode, which is also available at all resolutions).

As to the DOS compatible drives, I think "DOS compatible file system"
would be more accurate in relation to the STe, as the Amiga can also
read/write MS-DOS disks, with the CrossDOS utility now included with
Workbench 3.0.

Certainly the STe still has the advantages you cited regarding an internal
power supply and built-in MIDI ports. However, the A1200 has further
advantages regarding max. standard memory (10megs vs. 4 for an STe), and
cheaper/more available accelerators. (Here in the US, at least, there
are is an excellent selection of faster 68030 accelerators for the A1200,
starting at about $399 for some of the the 40Mhz models).

Given however, that you noted a price of $199 there vs. $1299 for the A1200,
the A1200 really *should* be quite a bit better. My question is, why is
the A1200 so expensive there? Here in the US, the basic A1200 can be had
for as low as $369 mailorder, and a quick check in a recent issue of
Current Notes shows D&P selling a 2-meg STe for more than that! (Oddly,
they were the *only* advertiser that seemed to list the STe)!

Were you by any chance comparing the full retail price of an A1200HD,
and not the "street" price of an A1200? If not, I wonder how Commodore has
any market there.

I don't have an A1200, BTW, but I do have a 4-meg STe, with ICD Adspeed
accelerator, and an Amiga 500 with 5megs of memory (and no accelerator <sigh).

1966. Lots of Software For Sale

Newsgroup: comp.sys.atari.st

Message-ID: <CGMIJ5.3xA@watserv1.uwaterloo.ca>
Source record: 198240

Here it is... lots of good deals.
All this stuff comes on original disks and is supplied with the original manuals, unless otherwise noted. If you want a package of stuff from list, we can work out a deal. Minimum order will be $15US (+$3 shipping). Here goes:

Minix 1.5 (10 disks and bindered manual) $40
Tempus II (text editor) $10
MiTerm (terminal program) $5
K-Roget (awesome .acc thesaurus) $20
Alice Pascal $10
STraight Fax 1.6 (great FAX software) $50 (also have PP Fax modem $80)
VIP Pro (good spreadsheet) $10
Revolver (multi-application mem segmentor) $10
FONTZ (GDOS font editor) $5
Hyperfont (same as above) $10
Masterplan (spreadsheet) $10
Mark Williams C w/csd (standard lang) $35
Super Librarian (MIDI sound librarian) $35
Calamus 1.09N w/font editor (the best dtp package) $100
Word Writer ST (standard word proc) $15

Macro Desk $10 General Store $5
NEOchrome $5 Equation Builder $5
Why Wait $5 Typing Tutor $5
DATAretrieve $5 Magical Anagrams $5
Flash 1.6 + Kermit .acc $15 Magical Math II $5
Planetarium $5 Magical Math III $5

Tetris (disk only) $5 Silent Service $5
Wayne Gretzky Hockey $10 LCS Wanderer $5
Hard Drivn' II $5 Motor Massacre $5
Team Yankee $10

TOS 1.4 (6 chip, original) $45 Crystal Desk Acc. $5
Hyperpaint 2.0 $20 Boulder Dash Cons. Kit $5
Learning C on the ST (book) $5

EasyDraw $40 Sudden View $15
Spectrum 512 $5 MacroManager $5
dbMan $25 Wholly Macro! $5
Barbarian $10 Superbike Challenge $5
Star Raiders $5 Gone Fishn' $15

1967. Thinking about Cannon BJ-200's....Hmmm

Newsgroup: comp.sys.atari.st
Date: 1993-11-17 06:57:36 UTC
From: 01mbmccabe@leo.bsuvc.bsu.edu
Message-ID: <1993Nov17.015737.24886@bsu-ucs>
Source record: 198241
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm thinking on getting a Cannon BubbleJet 200 so I can put my old workhorse Panasonic KX-P1091i (9pin) out to pasture. I've heard good things about them before and just read the great review the BJ-200 received in the big review of printers in some PC (?something?) magazine.

If anyone has any experience with using a BJ-200 on an ST lemme know! :)

I'm wondering how easy it will be to find drivers for WordPerfect (and other PD Wordprocessors) Opus 2.31, PageStream 1.8, and other programs.

Also wondering about general impressions, specific problems, or other features that might be outstandind.

Thanks!

1968. SLM804 problems

Newsgroup: comp.sys.atari.st
Date: 1993-11-17 07:07:05 UTC
From: ehood@convex.com
Message-ID: <1993Nov17.070705.5378@news.eng.convex.com>
Source record: 198239
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,

I recently obtained a used SLM804 laser printer. However, when I power it on, it nevers gets out of the wait/warmp-up mode. I believe I have all the proper things in place:

- SLMC804 is hooked up to the DMA port and is ASCSI ID 7.
- Have the big serial cabll hooked up from the controler to the laser printer.
- I boot up with the SLM804 Printer Emulator Disk.
- A message saying the diablo emulator is loading and that it is loading TYP?????.FNT.
- The GEM desktop appears with the SETUP630.ACC loaded.
- The SETUP630.ACC gives "UNSPECIFIED ERROR" as the Status.

I initial had things booting from my hard disk, but the printer never went into ready mode. Therefore, I tried everything from floppy with the hard disk disconnected. I even waited way over the 2 minutes the manual said it would take to warm up before turning on any other components. But nothing.

I'm not a laser printer expert, but shouldn't some of the parts in the printer get hot, or is this only when it actual prints. Anyway, no surfaces in the printer are getting warm. There is only a little heat coming, from what I believe to be, the power supply.

I've checked the drum & paper chargers, and the wire is intact.

Any help is appreciated, and thanks ahead of time,

You can use wordperfect 5.1 (on a pc) for that purpose. Just select saving (exporting ?) as a wp 4.1 / 4.2 type file. Works for me.

There's a program by Juergen Lock (nox@jelal.north.de) which gives
you virtual consoles. I's like the MiNT fasttext device, but repeated
10 times. You can switch between consoles using Alt-F[1-10]. You'll
have to mail Juergen if you want it because I don't think he has
put it up for ftp.

I do not believe that there is a Mac version of PageStream. There is an Amiga version (rather more advanced than the Atari version, it would seem). I think you may have been confused by a previous message, in which Evan Langlois rather badly edited a message from me, regarding STs/Macs and ST software.

True, but you only half-quoted me; you chopped off the bit where I said
that these products are dead-end. BUT, it still costs money to replace
them. I believe that all of the products mentioned run on the Falcon and TT,
so I would not have to buy new software when I change machine. I may, at some
point, need better software, and would then need to buy something, but
that's a different issue.

>...
>Falcon will not drive your ATARI laser without an adaptor which has not

Fair point about the Falcon and SLM, although I was thinking of upgrades to
TT as well as upgrades to Falcon. Yesm the missing PostScript in Speedo
is a big disaster.

>The Falcon is also highly underpowered for the price they charge.
Agreed, but there aren't any options other than Falcon or TT, unless I
am prepared to trash my whole software investment. This was the original
point I made which you half-quoted.

>>
>>Anyone, any ideas?

I have a very early STE with TOS 1.60. I've tried simmfix.prg (available from
umich atari archive via FTP) and the patch program given away with ST Format -
both programs fool the STE into recognizing the 2.5Mb configuration BUT for
some weird reason they both only work every second or third cold boot?

If you try either of these programs it's best to boot repeatedly until they
eventually configure things correctly.

On a brighter note I recently tried a copy of mem.prg (obtained from the ST
Club - via a friend but can get disk number for those who are interested).
This program appears to work everytime.

Hope this is of use to somebody

Pete

I agree, even PD or shareware ones should have desk icons (maybe
shareware authors could give away their icons upon recieving the
registration). Icons really really make using the Atari desktop (or
replacement) much more intuitive.
Icons should include:
program itself
folder for the program
the programs document type.
And optionally icons for the rsc files, on disk docs, .inf configuration
files etc. etc.

Erlend.

What do you want 24bit for? The Falcon graphics are pretty good for most things.
GIFs and JPGs look great in 256/truecolor modes.

: of printers in some PC (?something?) magazine.
I have one, and I _really_ like it. It's quiet, faster than a dot matrix,
and the print quality's very high, especially if you use laser paper.
: I'm wondering how easy it will be to find drivers for WordPerfect (and other PD
: Wordprocessors) Opus 2.31, PageStream 1.8, and other programs.
Well, you probably know that it emulates both the BJ-10 and the Epson LQ
510. You shouldn't have any trouble finding drivers for it. FontGDOS
includes a BJ-10 driver which works great, and you can use an Epson LQ
driver. The BJ driver is best for graphics, but if you're doing text
only, I would use Epson emulation.
: Also wondering about general impressions, specific problems, or other features
: that might be outstandind.
Overall, I like the printer very much. It's small, quiet, fast, etc.,
etc. About the only thing I don't like is that there are normally _63_
lines of text on a page, rather than the standard 66, so programs that do
text and graphics on the same page, or do fancy things with positioning
the printhead get screwed up unless you're careful.

>Raymond Collins
>rcollins@magnus.acs.ohio-state.edu

Netland might find the following interesting.

I was at a graduate career conference and stopped to speak to the IBM
representative that was there (some high muckety-muck in Human Resources).
After spending the requesite several minutes kissing butt to try and get an
internship, I decided to be a little cagey and see if I could determine what
IBM thought of their Atari contract. At this point I had NOT mentioned that I
was an Atarian, nor had he yet looked at my resume.
I mentioned to the IBM rep that I had heard a rumor that IBM was making
products for other companies in their manufacturing facilities. His answer was
that the rumor was true. He then said, quote, "For example, we have a big, big
contract with Atari to make their new game machine."
Sounds promising to me.

(He also made a comment about what they want to do to Intel with the
PowerPC. According to one of the on-line magazines ... the source possibly
being Bob Brodie himself ... Atari is currently negotiating OTHER contracts
with IBM. Is there an Atari/IBM PowerPC in the future? Hmmmm.....)

TL> to BUY Cubase.

The issue is rather interesting .. I ofcourse do not like piracy, but the fact that Cubase v3.0x STILL doesn't seem to exist cracked may suggest that we on the Atari have seen the first close-to UNCRACKABLE protection ...

So, has anyone seen Cubase v3.0x cracked? If not, I think people should try to get hold of their routines ... (though I've heard they're linked to the fact that Cubase is NOT OS-compatible .. :-/)

Atleast this should have boosted Cubase sales ..

Why doesn't prying it open work? I know it can be done as a) I used to own
one and b) it's the very same plastic cartridge that was used on the original
Magic Sack and Spectre 128. Granted, it's a bear to open but you can do it.

Just obtained GNU Chess from net. Works fine, but would like to modify C source to have a GUI front-end. Which brings up the question - Do you need to reformat or use a special editor or text processor to look at or modify GNU ascii files? I noticed that Doc or C files etc.. lines look out of "alignment". A long time ago I remember hearing that you had to use Tex or some program to reformat GNU files? Thanks for any advice

OK, my computer is on the fritz...

When I turn it on, the screen goes blank and then there are rainbow verticle lines throughout the screen.

Anyone see this problem before?

I think when I brought something like this up before, I got a response about a 2.5" sickness (because that is the altitude you have to drop your computer at to make it work again). But I don't think I want to do that even though a lot of people claim that it solves certain problems.

Thanks for your input.

Atari must be selling something because I heard that they were making
a profit once again (a small profit but a profit).

Also, if the guys at Atari were smart, they would redesign the Falcon030
in a small PC-style case with the Jaguar chipset.

The Jaguar is superior to the Falcon030 in almost every way. I just don't
understand why Atari didn't give the Falcon030 24-bit color too?

I've got a TT for sale that I don't use most of the time, so it's up for sale to the highest bidder. Please e-mail me offers. The system consists of a TT with 50MB Hard Drive and 8 MB of RAM (4 ST/4 TT). Works great.

1998. music notator programs advice please

Newsgroup: comp.sys.atari.st
Date: 1993-11-17 17:48:22 UTC
From: support@incaltd.demon.co.uk
Message-ID: <753587133snx@incaltd.demon.co.uk>
Source record: 198273

I have recently posted this in comp.music and someone suggested
I send it here . Any replies would be very appreciated.
please send replies email to the address below

Hi,
Can any one give me some advice on a ST music notator program.
I have a STE 1040 with hi-res screen.
I am on the look out for a good but fairly cheap notating program.
I have used Cadenza on PC
and Maestro and Rhapsody on Archimedes and would like something like this
I guess.

I also already have PRO-24 (bundled in with the STE) but the Notation
part is not good. I have a few PD programs but they are also not up
to what I need. (e.g. one of them is just a graphics editor with
no contraints where you can place a note which then can be 2/3 on aline
or part on a line or whatever.....crazy)

I guess I need MIDI in
also the facility to do good screen editting.

Obviously I realise there are such programs as Cakewalk and Notator
but I do not want to pay multiple hundreds on pounds.

(Maestro on archimedes is thrown in with the machine I believe and is
not too bad i spose)

I guess I am prepared to pay up to 100 UK pounds. (?)
Any suggestions or advice

PS can any one comment on Cubase LITE (??)

Thanks for your help

CH>I can see 60Hz non-interlaced flickering... 50Hz European games really
CH>bother me (but only if the screen is bright; the flicker is less
CH>noticable on dark screens).

No wonder:
actual CRTs don't have a long 'Nachleuchtzeit' (the time the screen is lit after being 'hit' by the beam). This means the following: each time after sending the beam to one line of the screen it get's dark quite fast. When the beam comes again, the screen is lit again but is getting dark again (quite fast ...). At 60Hz this (sadly) can be seen - not only by You.
When the brightness is low the difference is smaller.

Bye

> think my ass is cute...

I presume that you sent this before your boss communicated my concerns to
you. According to his reply to me, he did not feel my actions to be
anally retentive, nor did he sound particularly fond of your flagrent disregard
for the law (both in a true legal sense, and in the "good neighbor" Internet
sense). Just in case, I'll forward him a copy of this post.

I am really not interested in a bickering match. Until I read this, I honestly
thought your problem was one of ignorance, not attitude. Thanks for clarifying
this for me.

With regards to my actions, your sysadmin is responsible for your actions to
a degree, just as I am responsible for the actions of users on my machines.
Your behavior is, in a sense, making them look bad as well. I suggest you
think about this before classifying any system administrative staff members as
"anally retentive".

2003. Some games..

Newsgroup: comp.sys.atari.st
Date: 1993-11-17 18:47:15 UTC
From: sebelt01@starbase.spd.louisville.edu
Message-ID: <sebelt01.753562035@starbase.spd.louisville.edu>
Source record: 198278

A few questions... Is there any way to get Starglider 1 to work on a 1040STe (Color Monitor)? It loads fine but locks up when a shot is fired. Are there any more games like this? (I *like* polygon wireframe games) Especially any med-res polygon-graphic games? Also, what are the best handheld joysticks for the STe and where can I get them? Joy pads will do fine as well.. (I know, I know... :)

And is the game "Interphase" available anywhere for ftp? I had it on an ST Format disk, but the disk lasted for only one use!

Later..

2005. might have to give up my TT!

Newsgroup: comp.sys.atari.st
Date: 1993-11-17 19:41:11 UTC
From: csullogg@cc4.crl.aecl.ca
Message-ID: <17NOV93.14411184@cc4.crl.aecl.ca>
Source record: 198257

Where I work, there is pressure for me to abandon my TT and go to a PC. The pressure is based on the fact that we have a VAX network with copies of major software packages that can be loaded into the PC via Pathworks. Simply type 123R3 on the PC and LOTUS loads into the PC's RAM from the network and runs locally on the PC. Files can be saved to the PC or the net (private or shared areas).

The same can be done with Macs on the net but support for Macs is dwindling (unfortunately) and I will probably be forced to get a WINDOWs based machine. For anyone who has used a Mac, Atari or any other system with an intelligent user interface, using WINDOWs can be an extremely frustrating experience.

However, there may be light at the end of the tunnel. A Mac enthusiast is going to send me info on a new Mac. Apparently it has dual processors (68030, maybe an '040, and a '486). Hot keys can switch between Mac and PC modes. Therefore, I could use Macware and the Mac OS for real work and WINDOWs when I absolutely have no other choice.

Best fact is the price. It is supposed to be $2500CDN (divide by 1.35 for US pricing).

Maybe I'll be able to take the TT home (not really needed since I have a 16MHz Mega4ST with 220megs of hard drive and an SLM605 laser at home).

>they would like to share, we would appreciate it. Thanks.

If you can find an AlberTT board, it will give you 1024x768 with 16 colors. It costs $299. It's TT and MegaSTE compatible since it goes in the VME port.

Otherwise, look to spend at least $400-$500 for one that does everything.

>

Actually it was sent considerably after. As I personally did not see my
sysadmin's response to your complaint, am I pleased to find out that he is
behaving in a responsible fashion concerning the incident, just as he
should. However, your act of forwarding my most recent reply to my sysadmin
is just a demonstration of your immaturity because your original complaint
'did not work' the way you wanted it to. Your first complaint to my sysadmin
was perfectly warranted because what I did was illegal and was an infraction
of the rules concerning usenet posts. However, my calling you 'anally
retentive' (which I still told true) is not against the rules, nor is it
illegal in any way, nor does it concern this entire piracy issue at all.
Therefore, for what reason are you sending this to my sysadmin? While my
calling you that was certainly rude (as was your comment about my ass),
it is not an infraction of net policy and therefore is simply not the
business of my sysadmin who has more important things to do with his time
than listen to the whinings of an immature person who can give out insults
but finds himself unable to take them and therefore feels he must take
inappropriate action to 'shut up' the person insulting him. For a sysadmin
yourself, you sure have a poor understanding of net policy.

>I am really not interested in a bickering match. Until I read this, I honestly
>thought your problem was one of ignorance, not attitude. Thanks for clarifying
>this for me.
>

It began as ignorance and now is defense, not of my actions, but of my
character and of the network in general and how sysadmins are SUPPOSED to
handle situations.

Hello all out there...

I have a small question..
I have seen that some people have problems with some software which will only run on computers with 50Hz, or with 60Hz. Now I know there are programs out there to switch between these frequencies, but this problem still persists in some demos (The Pandemonium demo in particular, which refuses to work at 60Hz), which require correct frequency upon boot-up or reset.

To make a long story short, I have written a small program to switch between 50 and 60Hz and also this frequency survives a reset. Does anybody want me to upload it??? Sources included of course.

Email is useless, I lose my access on monday 22nd, but I'll still have netnews access. So, what's it to be? Anybody want it?

Cheers
Barry

But, the US has a MUCH higher population (for example, about as many
people live in New York City as live in _Canada_)...

This is all speculation though... We'd have to ask Atari for real
figures and there's no way they'd ever tell us truthfully.

> until %not %next
>
> I used this to ZIP all the MOD files on my BBS into individually
> named ZIP archives.

Or use a more sensible CLI like bash (Warwick will be proud...):

function zipmods
{
# Substitute your favourite "compress as well as you can, and
# delete the file when you're done" command-line on the 2nd line
# there...
for i in "$@" ; do
zip -m9 `basename $i .mod`.zip $i ; done
}

Then you just type:

zipmods foo.mod

or

zipmods *.mod

Though I'd probably just type:

for i in *.mod; do zip -m9 `basename $i .mod`.zip $i; done

Unfortunately, it's not for me... :-(

A couple of years ago, I remember hearing about a company that had a system based on a TT030 that would let you design things in Calamus, and it would drive a vinyl cutter to make signs based on your Calamus design... Does this ring a bell for anyone? I'd hate to have to call up Atari and try to jog Bob Brodie's memory for this (har har, I'm sure I'd get through!).

If anyone can give me some leads into finding this company, I'd really appreciate it! If not, does anyone have Bob Brodie's phone number? :-)

Some friends of ours are in the business of making signs and whatnot, and were looking at a similar system (for a mere $13,000)... I suspect a TT system would be cheaper, and probably better for them to use (since I've got 7+ years of Atari experience and access to the Internet's wealth of Atari material).

evanlang@sdf.lonestar.org (Evan Langlois) writes:

>Now it seems logical that since GENEVA is fast
>and MiNT is fast, but MultiTOS is slow, then replacing the AES with the
>GENEVA system (w/MiNT) would give all the features of MuliTOS with the speed
>of GENEVA. This may not be a logical conclusion!

It isn't:

Geneva is fast
Geneva is AES
AES + MiNT is slow
MiNT is fast
BUT
AES is fast

So:
Geneva + MiNT = fast is not necessarily correct

It is the *combination* that causes the problem.

>Why is this slower? Well, the AES as a separate task has to poll while
>other applications are processing, thus slowing them down.

Exactly. And the best solution is to turn that polling around to
make it interrupt driven. Why is hasn't been done, I don't know.
It seems trivial to me, since the mouse already produces interrupts,
and VDI's provide the mouse vectors for these interrupts, and the AES
is written on top of the VDI.

>Its not a matter of GENEVA being incredibly efficientm - I would expect MiNT
>to slowdown GENEVA just as much as MultiTOS, they just work differently.

Yes. I suspect GENEVA has more hope of implementing efficient preemptive
mtasking via MiNT than MultiTOS's AES though, since GENEVA appears to be
a more cleanly written program (just going on the fact that it allows
more generality than MultiTOS's AES - such as multiple co-operative
processes).

>Anyway, I hope this gives some of you something to think about anyway, and
>hopefully ATARI will speed up MultiTOS. There shouldn't be that huge slowdown
>from running MultiTOS - people tell me 10% slowdown)

This percentage is theoretical, right? MiNT already does that anyway
(I've tested MiNT running without GEM and compared it to a gumby shell
like Mupfel, and get about 5% to 12%, depending on operation). 10%
overhead is very reasonable to expect from a multitasking system. So,
in theory, MultiTOS need consume no more CPU (ie. if written using

interrupts).

>problems with dialog boxes in windows).

I really don't see the point in this. If a program's window can't be
bottomed, big deal. Any "very tricky way" would be a kludge. I'd rather
the program just not respond to the bottoming event.

BTW, the latest GEM++ handles BOTTOMED events, so any program written
with it will also handle them. This is the case with any library, and
so programs need only be relinked to provide the new functionality.

(nb. GEM++ 1.8 is flaky on the bottoming code. GEM++ 2.0 already has
all that fixed, but I won't be releasing it just yet. If it's a
problem for you, email me, and I'll send the fixes for the flakiness)

I hate this sort of thing, since it makes it hard to look at the files
without an Atari (eg. here under Unix).

However, it is a good way to provide program registration, which I believe
is the purpose with GEMview.

MANY of the readers of this newsgroup are computing professionals.

Software piracy harms computing professionals.

Programmers, Designers, Documentation Writers. All suffer directly
from piracy. Hardware developers also suffer in the long term, due
to decreased confidence in the machine, not to mention incompatibilities
caused by the copy protections schemes software writers are forced
to use. If there was no piracy, every game you bought would be
hard-drive installable.

F>trademark of NEC for their brand of multiscan monitors. I guess this is
F>incorrect??
Well, SVGA-monitors mostly have different preset line-frequences.
Just Like 31, 35, (38, 48)kHz.
But values between these aren't available.
MultiSync is a TM of NEC, but not Multiscan (other the other way, don't
exactly know).
These (nowadays) use frequnecys between 30kHz up to 60, 64, 80 or 100kHz
so You can get higher resolutions with a higher 'Picture-Refresh'.
BUT with these You can't display the old RGB-resolutions (ST-low, ST-Med)
the normal way because for these a line-frequency of 15Khz (14.6??Khz, the
frequency You hear whistling in normal TV-sets). Old NEC 3Ds are capable
to display these.

F> So to be able to run all modes on a falcon with one monitor I would
F>need a multisync (not multiscan) monitor that can go as low as 15Khz
^^^^^
F>and have a vertical range of 50-78Hz?
Yeah! But You'll have problems finding these. Better buy a newer one (17"
would be nice) with a maximum of at least 64kHz (when You want to use
BlowUp or Screenblaster or so). For Original ST-Low/Med You can use a
tv-set (with Scart maybe), should fit for Demos ...

Bye
Stefan

Computer hardware, software and books for sale:

Everything I have left --

Atari ST color monitor, CPU, joysticks, mouse

Software, books, journals

-- $200.00 (firm)

==========
Call Rich Whitfield at 614/833-0191 6-9 pm weekdays, 12-9 pm weekends.
Below is the ad from a couple of weeks ago. The hard drive, some software,
books and games are gone, but there is still a LOT left!
==========

HARDWARE:

CPU and color monitor
(will not be sold separately)
External MFD 720 floppy disk drive
Atari SH204 20MB HD SOLD
Joystick & mouse

SOFTWARE: (All software includes manuals)

Programming:
ST Basic
DR Logo
DBasic for the ST
SoftWorks Basic
HiSoft Basic Professional
GFA Basic 2.0 (w/ compiler)
GFA Basic 3.0 (w/ compiler)
OSS Personal Pascal
TDI Modula-2 (Developer's version)

Yeah, I've tried ME 3.11 and it's okay but things are just a little too
slow for my liking on a standard ST (no Screen Accelerator or suchlike).
Actually I thought that 3.12 had been ported already!? I'm sure if seen
something that looks like it would be on an FTP site somewhere.

Cheers,

To the best of my knowledge, Starglider 1 works fine on the STE, (At least, this version).

If you like polygon graphic games, then check out Starglider 2, AMAZING stuff! Mercenary 3 isn't bad either, although not really to my tastes as it takes far to long to get anywhere!)

Interphase, whilst released by ST-Format, is not PD, I have the disk (I was playing the game yesterday actually, wierd, but good!), try doing a disk scan with F-Copy of some such program, it may just be a bad few tracks, in which case I'm sure I can MSA (Magic Shadow Archiver), the problem bits & send them to you!

2038. Re: IMG to GIF converter? GEMView!

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 05:04:00 UTC
From: Stefan_Damerau@sl.maus.de
Message-ID: <A56419@SL.maus.de>
Source record: 198199

In article 753145379.AA01713@byte.bbs.no William Kent writes:

WK>What is the latest version?
[Of GEMView]

Version 3.00 has been released. Now it's no more one prorgram including
the parts for loading/saving.
There are several modules for - loading
- savin
- printing
- Picture-editing
- ...

You can code Your own ones (docs for this are included in the package)
and should send them to Dieter.
But this Version is a little buggy (thinks You use a Demo though having a
code for registering it with GEMView Install)

Bye

2039. Re: Fractal Programs?

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 05:09:00 UTC
From: Stefan_Damerau@sl.maus.de
Message-ID: <A56420@SL.maus.de>
Source record: 198200

In article H.eg.DN7flx&EYXk@albemuth.equinox.gen.nz John Collis writes:

JC>Can anyone else recommend a good, fast, flexible Fractal program that
JC>works in Monochrome and can save files in a regular graphics format so
JC>that pictures are exportable to something else.

Some examples:

Fractal Playtime (FRACPLAY.LZH/ZIP)
Uses GDOS for Printing in high(!) quality and uses tv-Scan-like or
div-con calculation (quite fast, the one thinking that if all pixels
bordering a square are the same the pixels inside are the same too)
Can save the codes of the fractal or the graphic (*.IMG, *.PI1-3 ...)
so You can look at it with GEMView or recalculate it later with Fracplay
again (saves discspace)
But it only calculates Mandelbrot and Julia
(Could use a detected 68881/2 too but on STs?)

Chaos 6.02 (CHAOS602.LZH/ZIP)
German program being able to calculate quite more than Fracplay. VERY
big stuff (and complicated for me ...)

JC>What is everybodies favourite Fractal Program??

DSP-Frac from Brainstorm - sorry, Falcon only :-/

>the Atari have seen the first close-to UNCRACKABLE protection ...

I've heard rumors that it has been cracked, but only rumors. I've seen
the 2.0 version cracked, not seen 3.0.

>So, has anyone seen Cubase v3.0x cracked? If not, I think people should try to
>get hold of their routines ... (though I've heard they're linked to the fact
>that Cubase is NOT OS-compatible .. :-/)

It would seem that if Cubase is uncrackable that Steinberg would be loath
to give out their protection schemes, because eventually it would fall
into some devious hacker's hands and poof! No more copy protection.

I wish piracy weren't such a problem. If it weren't, Cubase would
probably cost only a fraction of what it does, and more people could
afford it.

If we only lived in a perfect world.

While I'm sure his intentions were otherwise, might I point out that he simply asked if anyone had cracked the program, not if he could have a copy, not if anyone would tell him where to get it, just if it had been cracked. It's not illegal to ask a question, so don't jump on him for it. No, I'm not trying to promote pirating the software (I actually purchased a copy of Cubase 2.0 and love it!), I'm just asking for people not to jump to conclusions and overreact.

2044. Re: Curved Text (Correct Posting!)

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 06:25:34 UTC
From: dwallace@wam.umd.edu
Message-ID: <2cf4gu$s7e@cville-srv.wam.umd.edu>
Source record: 198316

The excellent shareware CrackArt has functions for curving and permuting blocks in interesting ways; it doesn't exactly facilitate circular text, but has lots of effects you might find useful. At the very least, it's worth the few minutes it takes to grab it off an ftp site and take a look (I've seen it both on umich and Clausthal... make sure you get the English translation of the docs, too, if you don't speak German).
Some of the high-end dtp packages have lots of goodies along these lines, too.

2045. Help! Starting with Heat-n-Serve C!

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 06:35:18 UTC
From: 01mbmccabe@leo.bsuvc.bsu.edu
Message-ID: <1993Nov18.013518.24939@bsu-ucs>
Source record: 198317
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I am trying to get started learning C using HSC 1.44. This is the code for the first sample program:

```
/* Filename: c2first.c
Requests a name then prints it 5 times and rings a bell. */

#include <stdio.h>
#define BELL '\a'

main ()
{
int ctr=0;
char fname[20];
printf("What is your first name?");
scanf(" %s",fname);
while (cnt <5)
{
printf("%s\n", fname);
ctr++;
}
printf("%c",BELL);
return;
}
```

When I try to run the source through HCC.TTP I get this error:

```
"warning in D:\DATAFILE\CPRGS\C2FIRST.C (20): Function should return a value"
```

Can someone familiar with Heat-n-Serve (or who just plain knows :) give me some insight here?

BTW, sorry if the post is too long, but I don't really know who to direct E-mail to at this point. :)

Thanks for any and all help!

I am the owner of a fully dongled 3.01 and glad I bought it!

I have SEEN (looking over a guy's shoulder) a cracked v3 or at
least it CLAIMED to be v3. It had an INSPECTOR and the menus looked
like v3 but the transport bar was definitely v2.

Oh yes; and it was BUGGED. I won't say what the bugs were in case
it helps the "crackers" (adjective as well as noun) but in certain
circumstances, it screwed itself nicely into the ground.

BTW. Isn't it a bit annoying that the human synch works for those
who use cracked v2 but NOT for me with my bona-fide v3?

What a load of Rubish, I use GEnie here in New Zealand and it only cost me
a $2us extra to use it from here, the Pacnet line here is Free...

This is the same for a number of other countries as well, but GEnie
does not promote this at all...

Check to se if there is GE.I.S. office in the UK. there should be, there is
one here...

They could help you...

Roger..... sheppard_r@kosmos.wcc.govt.nz

Therefore, you can connect a SCSI -> MFM controller on your SCSI adapter
(like Adaptec's one) and hook the PC drive to the SCSI adapter through
it... But that would begin to be expensive for what it's worth...

>

I don't know but there is a programm called fdformat (find it it any PC
ftp site) that allows you to format and read various enhanced disk formats
on 360, 640, 720, 1200, 1440 K drives, including atari formats, twisted
sectors, etc... The residents part (that hooks into HMA if any and a 286 or
more available) takes less than 200 bytes. That worked very well for me
and I exchanged up to 1.78 Meg HD disquettes between my PC and my Mega STE
w/ HD drive.

Patrice

2052. Yet another Falcon dilemma

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 11:37:29 UTC
From: fnjah@aurora.alaska.edu
Message-ID: <1993Nov18.023729.1@aurora.alaska.edu>
Source record: 198327

I have a floptical drive that works great on my ST wheter it is a boot drive or not. I have ICD's DMA to SCSI adaptor and software version 6.0.8 and the newer 6.2.3 ICD PRO Utilities.
But I can't get it to autoboot on my falcon. I have it directly connected from the SCSI II port to the floptical.
I can't even get it to boot with the software not on the floptical, but on regular floppy disk. (I have no internal hard drive yet, by the way)
When I turn on the falcon with the ICD software in the drive, the floptical grinds and then just kinda locks up. The software says it has an ID number of 8 (on the st it says it has ID 0) and it also says there is an id number of 16 with a big line by it instead of a device name. Is that the internal drive port with nothing connected?
The only way I can use the floptical is to leave it of until the desktop appears and then run the icd software.
Does anybody know what why any of this is happening and how to get around it without installing an internal drive?

2053. FALCON GAMES

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 12:18:09 UTC

Source record: 198329

It has been quite a while since I asked for you all to send me a list of games you have found that work with the Falcon using Backward. The response has been pathetic to say the least! So much for being ~15000 UK Falcon users! Anyway here is what I have so far, if you have any additions you would like to make please E-mail me. I will re-post every 2-3 weeks depending on the response.

regards, Kevin

Games that work (BEST COMPATIBILITY OPTION)

Another World
Backlash
Elite
F-19 Stealth Fighter
Kick Off II
Lemmings II
Populous II

Games that work anyway

Badlands
Beter Dead Than Alien
Chaos Strikes Back
Chess Champion 2175
Dungeon Master
Flight Sim II
Leisure Suit Larry
Sim City
Stunt Car Racer

Games that don't seem to work

James Pond II
Out Run
Populous
Sleepwalker
Starglider
Terrorpods
The Killing Game Show
Utopia

Please note that not all these games have been tested by myself, so the above info may be incorrect. If you find it to be so please let me know.

2054. Falcon prices in UK

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 12:25:21 UTC
From: Iain.Laskey@barclays.co.uk
Message-ID: <CGot69.6xy@barclays.co.uk>
Source record: 198334

I was pleasantly surpirsed to see Falcon prices in the UK are getting very reasonable. Gasteiner just quoted me 499GBP for a 4/0 model and 760GBP for a 4/65. I paid 899GBP about 3 months ago. They are still TOS4.02 machines though, 4.04 is only available as an upgrade.

Atari Works isn't bundled - it's another 129GBP from Hisoft (190 dollars)

This make main implicitly int returning.

> {

[... Stuff deleted ...]

> return;
Huh? No return value?
> }

So I think it is just a C error, not specific to HsC. You could better
do "return 0;" return 0 exit code to parent process or "exit(0);" .

>
> (1) aspect ratio of screen pixels
> (2) Phosphor color (I want my Notator to be in black and white!)

My original post. I ended up getting a monitor from Silica. To be blunt,
it's far from brilliant. The screen is slightly warped and the picture
doesn't sit in the middle of the border. I brought it on price (129QUID)
and the fact I don't need one with a speaker. It does the job but it's
a borderline 'take it back' case. Silica are lucky I'm not too fussy on
this issue.

I would advise you to pay the extra 20 or 30 quid and get a decent one, if
you can find one...

Hi!

Two weeks ago I read in this newsgroup(s) about people, talking they would buy a Jaguar as soon as the roll-out would be. The roll-out was now 3 days ago, and I haven't read ANY article from a Jaguar owner. Doesn't ANYbody has a Jaguar? Or doesn't ANYbody who has, the time to share his/her experiences with poor fellows like me on the other side of the ocean? This monday I expected huge articles from Jag owners who like the Jag very much and are complaining that there are WAY to less games.

On *.amiga I can read article's from proud CD^32 owners every minute.

On *.multimedia/*.crap I can read article's from proud 3D0 owners every minute.

But on *.atari/*.lynx I can't read article's from proud Jag owners...

If I write an article, it can be read all over the world in 10 minutes, so my conclusion is that there ARE NO JAGS UNTIL PROVEN THERE ARE!

So: If you are a Jag owner prove that I am wrong (PLEASE!), write long articles for *.atari/*.lynx about your latest (& best) buy!

Or you can E-Mail me!

Greetz,

Crazy AjM

******** Not handsome, not smart, only Crazy ********
******** Reach me at: arjanvdm@htsa.aha.nl ********

>
> Can someone familiar with Heat-n-Serve (or who just plain knows :) give me some
> insight here?

If you don't specifiy what main() should return, it will be assumed it sends
back an int (to TOS in this case). Thus the 'return' statement should have
a number following it - 0 being the value TOS expects if the program
completes OK. To be correct your program should contain:

int main()
{

blah blah...

return 0;
}

Hope this helps.

|> SCSI Error : Key 02 Code 31
|> What does this mean?
|> Is it configured to be a SCSI2 device?

Yes this is a SCSI device. Now the BAD news...

From the SCSI-II spec (Section 7.2.14 table 69 and 71)
Sense Key 02 = Device Not Ready
Sense Code 31 = Format Error (Due to media problems)

Basically you got a bad drive.

To verify your drive with the ICD software first make sure that the
driver is configured to look at the desired SCSI address, then run
the program IDCHECK.PRG, the Drive ID will be displayed if it can
access the drive at all.

{well you just read that didn't you, and it was a bit long, so I won't repeat it}

All I know is that on my friend's Falcon, where he has an autobooting internal H/D, it is _essential_ to set the SCSI ID number on his external SCSI drive to 0. This may be the problem.

Also, you could try reformatting your media using one of the official Atari Hard Disk Driver (AHDI) programs, as I think the falcon might possibly reject the ICD format.

You can do that every time you call pscontrol. But the system itself
doesn't not change the priority while working ans so MINT can't adapt
and isn't very flexible.

Seems like we scandinavian users get a little treat as well...
I just got word from the Norwegian distributor that they have gotten lower prices as well! They should equal the British prices when you adjust the sales tax (22% over here, 17,5% in the U.K.) and the exchange rate. I got a NOK 9980,- quote on a 4/80 machine (including tax). I'm still in the dark whether this is a 4.02 or a 4.04, but it's probably the same as in the UK. Didn't ask for 4/0 machines, though...

They also told me they had gotten very good results with one of the latest resolution enhancers (can't remember if it were BlowUp030 or ScreenBlaster, possibly the former) - 1024x768 in 16 colours. Interlaced, though, but at 88Hz so it was bearable.

Since the PageStream Amiga upgrade, there have been 2 major improvements to
the Atari version that I know of. Softlogik isn't doing a new Atari version
(although they are leaving the possibility open), but they are supporting the
existing version quite well, thank you.

And of course my usual whine, in case anyone at Atari is reading this: the
biggest improvement that could be made to PageStream would be a faster VDI.

There are many Soundtracker like programs for the ST (I guess you want to compose with the computer only, no MIDI). One of the best Soundtrackers is the ProTracker from Karl Anders 0ygard, available on ftp.tu-clausthal.de in the directory /pub/atari/sound/ The file name is PT20.LZH

If you want to do MIDI music, I can't help you. Maybe someone else knows more about this...

Or, if you have a Falcon030, get MJUZAKK.ZIP from /pub/atari/falcon/ as soon as possible. It is a 16 Bit Soundtracker with awesome sound quality. The docs are in german, but this will change soon...
: Thanks !
You are welcome :-)

The 'word' is out that the initial run of 50,000 Jaguars have already been
sold to distributors. If so, where are they?

While I agree 15K seems very unlikely for Falcon sales in the UK, it's a fact that European (and perhaps UK alone?) have far outstripped US sales for some time now. I'd put total Falcon sales in North America at around 1K. But hey, it's all rather a moot point, isn't it? No advertising/no dealers = no sales.

: Directions would be handy ... I mean I want to spend every possible hour there !

Its part of the National Exhibition Centre Complex (NEC). That means you
should go to Birmingham International railway Station, the same one as for
the Airport. Personally, I would advise getting a taxi from the station to
the motorcycle museum.

I am going too, maybe I will see you there?

: Also is their a list of companies who will be appearing ?

There is, but I don't have it handy. Maybe if I can find it, I will post
it here. One company I don't expect to see there, though is good old Atari
UK themselves!

In case anyone didn't know, there is also a Manchester venue for the Atari
Fair. This is HAYDOCK PARK RACECOURSE, which is just off the M6, I think
junction 17. Date will be December 12th. Apparently, all the companies
which are going to Birmingham will be at Manchester too.

Hmm. I bought mine directly from Atari and I was told I'll get
it by (at least) a week before Christmas. Basic FIFO, got a unit,
fill an order, and they said if they get parts before others they'd
send those right along. (I got the full complement of things...)

So, I don't know about anyone else, but I won't be able
to post anything for probably another month...

Wrong IMHO, see below.

> Your first complaint to my sysadmin
> was perfectly warranted because what I did was illegal and was an infraction
> of the rules concerning usenet posts.

Bingo. That is what was missing from your post. Your insults do not concern
me in the least. Now, let's follow this. First, you make your mistake. Then,
you defend your actions in at least two posts. Then, I respond. Then, you
insult me and what I did. You gave me no reason to assume that you had
changed your attitude concerning your blatant disregard of both criminal and
Internet law. In fact, the attitude displayed in that post was more indicative
of the exact opposite. Thus, my second note to your employer was justified
for precisely the same reason as the first.

> However, my calling you 'anally
> retentive' (which I still told true) is not against the rules, nor is it
> illegal in any way, nor does it concern this entire piracy issue at all.
> Therefore, for what reason are you sending this to my sysadmin? While my

> than listen to the whinings of an immature person who can give out insults
> but finds himself unable to take them and therefore feels he must take
> inappropriate action to 'shut up' the person insulting him.

You misunderstand my concern. Your followup seemed to indicate an apparent
continuing lack of understanding concerning your infraction. If you had
included the statement above (where you admit your mistake), I would not have
taken that action. In fact, I probably would have complimented your newfound
(but obviously not all-encompassing) intellect on the subject.

> For a sysadmin
> yourself, you sure have a poor understanding of net policy.

I won't grace this laughable claim (from an admitted criminal) with an answer.

> >I am really not interested in a bickering match. Until I read this,
> >I honestly thought your problem was one of ignorance, not attitude.
> >Thanks for clarifying this for me.
>
> It began as ignorance and now is defense, not of my actions, but of my
> character and of the network in general and how sysadmins are SUPPOSED to
> handle situations.

Your character was not in question. As for sysadmin conduct, your uneducated opinion has no validity, particularly when your recent infraction is factored in. Perhaps you should exert you newly developed knowledge concerning "scope of responsibility" here. Now that you have had your head forcibly ripped from a nether orifice, I suggest you blink hard several times in succession and see the light.

OK, enough of this one-upmanship. You made a mistake, I responded. You insulted me, I responded. You admitted your mistake (finally), I responded. You think I am an asshole, I think you type faster than you think. The world continues to spin. If you think I over-reacted, tough cookies. Note that I was not the one that blew it in the first place.

I am not particularly into this "net-Nazi" role. In fact, my disdain for such entities is what prompted my response in the first place. I don't want to see Usenet degrade into a censored, politically correct forum. I assume that you would not like this to happen either. I will gracefully refer to your infraction as a "mistake". Such mistakes will give folks the excuse to regulate Usenet, and I would like to put that off for as long as possible.

In closing, I would like to request that if you wish to continue this little net argument, let's either move it to alt.flame or do it in email. This is also a part of the Usenet "be a good neighbor" attitude (that of not cluttering a topic group with non-sequiturs.

Well, you can get a new case for the Falcon/ST and I know that in an
old STFmt (that's ST Format) that they were making noises about a
german company doing a new case. So far as I know though they are
all horrendously expensive (100+GBP) and so I, for one, can live
with the good old ST style box...

As far as I know, pack-ice 2.40 is the best excecutable and data
filepacker for the ST. Not only does it work faster than the
rest, but the packed data is smaller than the other packer's
packed data. If there is an ST packet that is better than
pack ice 2.40, tell me about it.

BTW. pack ice is available by FTP from atari.archive.umich.edu
as ice_240.lzh in /atari/Archivers

Could be a third party casing. I think it was DDD who showed an *UGLY* casing
very similar looking to the old MegaST casing. The rumours going on the next
F030 casing is more along the lines of a TT style box...

Do you really talk about "responsible use of Internet resources"
and advocate arbitrary censorship in one and the same posting???
If this guy advertised illegal copies of ST software on behalf of
a friend, he certainly is a net.villain, but anyone who restricts
Usenet access for any reason is a net.despot.
You tell others that they don't understand their
responsibilities. But it seems that there are some fundamental
things that you do not understand. You don't understand that you
deprive the Usenet community of valuable contributions that the
victims of your despotism cannot post. You don't understand that
those computers you refer to as "my machines" are neither yours,
nor were they bought for you. Unless the math department at FSU
is radically different from the rest of the world, the computers
you administer have been bought to provide profs, students and
scientific collaborators in the math department with Usenet
access, among other things. I seriously doubt that your users
have democratically decided that you shall be entitled to
delete the account of anybody whom you suspect or consider to
conduct or promote "illegal activities over the Internet".
If you think that somebody does something illegal, over the net
or otherwise, inform the police or the state attorney. It is not
your business to enforce your ideas of right and wrong upon
others, whether your ideas conform to the laws in your country or
not. Doing so is self-justice, which really is no justice. It is
despotism and a road to dictatorship and doom. Travelling on this

road will kill Usenet as we know it very soon. So, please don't
advocate it, and please don't practice it!

This is probably due to them being in UNIX ASCII format (i.e. only linefeeds
at the end of lines, not linefeed-carriage return pairs). You can fix this
a number of ways. There is a version of the UNIX utility unix2dos for the
ST. The ue editor in Gulam will do the conversion automatically. I think
STeVIe will also do it. If all else fails, upload the files to a UNIX box
and use unix2dos on them.

As an innocent bystander, I find your attitude much more disturbing than
that of the original poster's. I can only interpret your attitude as
"I'm gonna tell your boss and he's going to throw you off the internet!"
which does not sound to me as very mature, but more like childish.

It also sounds like sysadmins should behave as the moral consciousness of
the internet. A role which I would prefer to attribute to the users of
internet themselves. I regard sysadmins more as a last resort, when
users are behaving so badly that removal from the net is the only
solution to the 'problem'. This is clearly not the case now!

This has nothing to do with my opinion regarding software piracy,
which I don't want to discuss.

Bye!

>side of the ocean? This monday I expected huge articles from Jag
>owners who like the Jag very much and are complaining that there are
>WAY to less games.

I may be wrong (and I'm sure someone will point it out if I am :-)
but the "Rollout" may have been meant more for the media than for
actual selling. The basic rumor I've heard is that the Jaguar should
start appearing in New York and L.A. within a week or two. The Jaguar
probably *won't* show up nationally (or internationally) until the
beginning of 1994 (not that far away). Considering that IBM is doing
the manufacturing, I wouldn't anticipate the same annoying delays
that accompanied the initial release of the Falcon...

Besides, if someone has a Jaguar right now, do you think they'd
be spending their time here instead of playing the Jaguar? ;-)

Rob

...again, double check me on this, but even though the Jaguar will only
be sold in NY and LA this year, you *might* be able to order one
directly from Atari or one of the dealers and have it mailed to you
(I don't believe Jaguar retailers have the same selling restrictions
that the Falcon ones do)...

...BTW I had to recover my message out of dead.article (since we don't
get the alt.games.lynx group), so I hope it comes through alright...

GemView has it's own installation program, you should use that one!!! That
installs your *.pax files.

Ciao,
/Carsten/

Subject: Killing people
Has it been done?

Intelligent answers from the net:
KILLING IS BAD! IT HURTS SOCIETY! YOU WOULD EARN MORE MONEY IF
YOU DON'T KILL PEOPLE. YOU ARE A BAD PERSON. YOU LIKE KILLING.

My answer:
I don't know.

My answer to the moral majority:
please shut up, read the question, and don't think you know the
underlying reasons the poster asked his question.

It's OK to discuss these issues, but don't blame the messenger for
bringing you the 'news' that a software package may have been cracked!

There is a PD/Shareware program caled FPCU that does just that... and I believe it allows the use of different archivers too. All with a nice little GEM interface.

The PAX files are in a compressed format by the Gemview author (presumably) and the archive should contain an install programs that decompresses the files. Did you say Gemview 3.0?? I thought it was only up to v2.48??

2097. Deluxe Paint Animations?

Newsgroup: comp.sys.atari.st
Date: 1993-11-18 22:48:00 UTC
From: ac382@Freenet.carleton.ca
Message-ID: <CGpM00.I6C@freenet.carleton.ca>
Source record: 198170

I was supposed to send someone a few Deluxe Paint animations but unfortunately I lost their address. Please send me a message and I will get them out to you. If anyone else is interested please let me know. I have a few megabytes of (mostly Star Wars and Aliens) animations (digitized with VIDI-ST @ both full & quarter screen). They look pretty decent especially if you have support for the 4096 collor mode (ie 16 level greyscale).

If you do not have the Deluxe Paint ST package but would like to view the animations, there is a freeware viewer available.

If you can FTP to alfred.ccs.carleton.ca please let me know and I will put them in the incoming directory.

Jack

You don't have to tell me that, as I stated in my first letter, I'm totally against piracy. (I'm not a musician though, which is why I won't buy it... :-)

The only cracks I've heard of worked for about 1.25 ms, and definitely NOT on any other TOS version than that of the crackers system.

(There's no reason why a bad crack would trash harddrives, that's why I don't think that rumour is valid)

{well you just read that didn't you, and it was a bit long, so I won't repeat it}

All I know is that on my friend's Falcon, where he has an autobooting internal H/D, it is _essential_ to set the SCSI ID number on his external SCSI drive to 0. This may be the problem.

Also, you could try reformatting your media using one of the official Atari Hard Disk Driver (AHDI) programs, as I think the falcon might possibly reject the ICD format.

I have the ICD pro utilities, and I have an internal IDE drive plus two external SCSI drives. I believe that with the ICD software, you don't absolutly have to have the external drive ID set to zero, you just have to have the ICD driver skip over the ID's that aren't used on bootup.

In any case, the ICD software works fine on my Falcon...

Re: PT20.LZH

Pro-Tracker v2.10 is around somewhere, I'm pretty sure it was the one released among the other files of MAGGIE11.ZIP (The Disk-Magazine 'Maggie', Issue #11, it usually has *some* useful tid-bits with it!)

There *may* even be a later version, but I can't remember :)

Anyone know where v2.10 is, as in a 'I need a blank disk, what aren't I in great need of' frenzy, the Maggie disk was wiped, and I could do with v2.10 as the only one I had was the ST version, and I've just gotten myself an STE.... (Yes, I've got 50-play!)

Caio!

From: lombardo@cwis.unomaha.edu
Message-ID: <lombardo.753669493@cwis>
Source record: 198181

Is there any pd programs out there to print SPC pictures on a HP Deskjet 500C? Where can I find software on the ST to support the Deskjet 500C?

I imported a jessica rabbit gif into pagestream and printed it using a 500c driver I found with the hpdeskjet utilities at aaue and just before it finished with the (nice looking) picture, it said INSUFFICIENT MEMORY and ejected the page after sitting there for a little while. I had text at the bottom of the page that it didn't print. What a lame program... I have 2.5 megs of memory.. That SHOULD be enough. Considering that the macs I use at school have only 2, and they handle pictures a lot better than my st.

hmmmm... time for a tt?

Atari read these messages?! I doubt it! :)

As for pagestreams speed, I saw it drawing a relatively simple picture,
and it took *ages* compared to GFA-Draft which drew horribly complex
pictures in a fraction of the time! (Admittedly, GFA Draft is a CAD
type program, and Pagestream is a DTP, but basically the same sort
of thing should result. Their VDI *really* needs a *lot* of optimising!)
(This was Pagestream 2.2 BTW)

I went to Babbages tonight and they said that the Jaguar will not be
available to the US buying public until just after Thanksgiving (Nov. 25
to you non-yanks). The initial rollout was strictly to dealers and
wholesalers. Once anyone gets their hands on a Jag, you'll hear about
it.

2116. Using Viper tape streamer

Newsgroup: comp.sys.atari.st
Date: 1993-11-19 04:55:11 UTC
From: fdomingu@zeus
Message-ID: <CGq300.EDI@watserv1.uwaterloo.ca>
Source record: 198189

I've tried to get my Viper 150 (ver. 21247) to work with Gemar with no luck (not that fluent in German), tapebios and GTAR(1.10) with no luck ... get the idea?
Anyways if anyone has had experience with using tape backups with the Atari, I'd appreciate some feedback. GTAR itself is vague to me but I cannot get it to create archives on the streamer and I am under the assumption that gtar unless specified with -f will attempt to write to a streamer device.

Pagestream is slow because it is slow. NVDI is very fast but the
improvement in Pagestream is minimal, I don't think the VDI has anything
to do with it.

Yes, this is true. The Jag starts selling the day AFTER Thanksgiving. It is a net-misunderstanding that has rec.games.video.misc all upset about this thing.

This is not a newsgroup devoted to game consoles. Try rec.games.video or whatever it's called.

> If I write an article, it can be read all over the world in 10 minutes,
> so my conclusion is that there ARE NO JAGS UNTIL PROVEN THERE ARE!

They're only sold in limited quantities in New York City and San Fransisco (and maybe Dallas too) so you can forget about it until 1994. I think someone (Bob Brodie?) said it could also be ordered direct from Atari after Thanksgiving Day. Don't know if this goes for overseas customers as well but you could call Atari and find out I guess. There are some talk about limited availibility close to X-mas in Europe, but these are only rumours as far as I know.

Don't worry about the crappy CD-32 or overpriced 3DO, hold on to your money and get a Jag when it hits the streets. I know I will.

Don't buy the 1Meg version. Some programs will likely end up being
incompatible with a virtual memory program. Depending on screen mode,
more than 600kB may be necessary just for the screen display; that doesn't
leave much! Even if the virtual memory system works, your machine is likely
to have so little free memory that it thrashes.

|> gratefully received.
That's easy, CIX! It's a UK based service. Has a fairly active Atari scene
including a very good Falcon area with loads of files for download. Better yet
there is a superb offline reader for the ST called Cixcomm/read which automates
everything and makes your calls cheap and efficient. A lot of people who are
well known in the UK atari scene such as Ofir Gal, Gunter Minnerup, ST Review,
ST User, Hisoft, Andy Pennel, Andre Willey and many more all all active there.
Atari also frequent the system although they are fairly quiet unless you mail
them directly. They do sometimes upload patches and demos though. The service
costs something like 12GBP to sign up and monthly charges are very reasonable
when using Cixcomm. I log on about 3 times a day to about 50 conferences, often
download big binaries and get a monthly bill of about 10-12GBP. Give them a
call on 081 390 8446.

From: fnjah@aurora.alaska.edu
Message-ID: <1993Nov19.042205.1@aurora.alaska.edu>
Source record: 198111

Maybe I just have a defective Falcon. Everyone else seems to be enjoying
theirs while I have nothing but problems.
I just noticed a while ago that some of the keys don't always show the symbol
they should. When I am using Uniterm as I am now, they work fine, but when
using AtariWorks and other things when I press "\" I get "#" and when I
press @ I get " and when I press " I get @. It is very annoying because I
can't set any directories since I can't find the "\" symbol in most cases.
I thought it was some hardware problem, but if it works with Uniterm it must
be ok. Is there some kind of CPX module or something I need to assign the
correct symbols to the keys? Is this a universal Falcon thing?

2132. Internet access

I think I saw a .DL viewer/converter on tu-clausthal (I think the full
address is ftp.informatik.tu-clausthal.de; check the FTP site list)...
it's probably on atari.archive, too.

I've never heard of a .GL viewer/converter.

This is just a thought, dunno if its doable... What about using the
LAN port of the Falcon? What is it? AppleTalk? Why not run a bind
program, or something that encapsulates IP into AppleTalk? Would
such a thing be possible?

Outside of all the features of the Falcon, the LAN port seems to me
to be a dead fish...

> add MultiTOS when/if it becomes fast enough.

What a load of crap. If TT or Falcon can't do it with RATsoft, you
don't want to run RATsoft. I may be a bit strange, but I don't want to
spend $1000-$3000 or so on a system ($3000 or so is what I expect to
spend for my next computer) and leave it sitting around all day running
a BBS program. I'd MUCH rather be running a BBS in the background (but
at a high priority) and continue editing, compiling, ray-tracing, word
processing, etc, etc in other TOSWIN and GEM windows.

The reason RATsoft can't run under MiNT/MultiTOS is because it's a TTP
program that draws on the screen with VDI calls, and _assumes_ its got
the whole machine to itself.

Fnordadel compiled with the MiNTlibs should do much better... and it's
freely available.

Not that I'm slagging RATsoft; it's good software. I don't like to have
machines sitting around doing nothing but running a single program... I
guess I've been spoiled by unix and OS/2 systems.

Source record: 198124

THE STUART A. LYSTER PI CALCULATION FOUNDATION

Prize of $20 Canadian.

To the programmer of the TOS 1.4 compatible (Atari ST OS) which
calculates the decimal expansion of PI, no more than 10% slower
than Stephan Olbrich's PI4.TOS, but which calculates to the RAM
capacity (or preferably beyond) of the computer (ie. rather than to a
limit upon arrays).

Times must be within 10% (or better) of Stephan Olbrich's standard:

100 decimal digits - .24 seconds
1000 decimal digits - 16.29 seconds
10000 decimal digits - 25 min 54.3 seconds

Doubling the requested number of decimal digits seems to quadruple the
required time, so, the times for larger #'s are accordingly;

25,000 - 2 hr 35 min 23.83 (est.)
100,000 - 10 hr 20 min (est.)
1,000,000 - 8 days 4 hours (est.)

(BTW - this is using the Machin arctan series. Using the Borwein &
Borwein quartically converging algorithm *will* yield far superior
results.)

Output must be made available to either screen or to disk.

Programs must be in my hands (by e-mail or by post) no later than
January 31, 1994.

A.PAGE3 at 22:41 EST

There is a function to run an external program from Storm. In the Basic window, type HELP EXEC and HELP GEM. For programs with no command lines, use "" as the command line (may make that optional later on).
GEM 0,FSEL$("","",""," will let you pick a program to run using the file selector. Naturally, ill behaved programs are not guaranteed to work. Don't run external programs during file transfers.
I have ordered Geneva and NeoDesk and will use them to work out any incompatibilities. I may also alter the menu bar and dialogs to be more in tune with the way Geneva works.
I phoned ICD and only got voice mail. Will try again tomorrow.

I can confirm that pathnames over 30 characters are a problem. Due to a goof on my part, you will get stuck in an infinite loop if the full filename (download path plus filename) is 30 characters or more.
I want to have a full set of patches and a new complete package by next Monday or Tuesday. I will concentrate on fixing all the little annoyances that people have been pointing out, and testing the stuff on three different systems (TT, MegaSTE, and original ST) so I don't introduce more bugs, as I did with the blink fix.

>

The cover of ST Format, I understand had a Falcon in a System Solutions Tower case, and it was upside down at that...have a look carefully. Maybe I should get a trainspotters award from STF just like Your Sinclair used to give all those years ago.

I have heard about a German company having a Case for the Falcon, but that was a few months ago...nothing else.

BTW, what is the price for the Falcon tower.... 179 pounds (as mentiond in docs sent to me by sys sol) or 199 pounds (as seen in mags) ?

Danny.

Sorry Andrew, but in posting your friends 'for sale' message including the bit
about a lot of pirated software then you are, in fact, supporting his piracy.
Sure, software piracy is a fact of life. But it's not one that we have to
blindly condone or tolerate. I just hate to see it 'advertised' on the net.

2154. Anyone Running D2D On Their Falcon?

Newsgroup: comp.sys.atari.st
Date: 1993-11-19 18:42:24 UTC
From: rost@tecrus.enet.dec.com
Message-ID: <CGr5t7.KpE@ryn.mro4.dec.com>
Source record: 197931

I'm getting closer to laying down cash on a Falcon, but have yet another question.

I got a super-brief demo of D2D the last time I stopped by the dealer. I am very interested in using this program both for mastering my home recordings digitally and bouncing tracks digitally on my four-track.

So here's the questions:

1. How much disk space is used per minute of stereo audio? Can you select lower sampling rates to increase storage time?

2. Is anyone using this with a drive other than the stock 65 or 80 meg units? Either external or internal.

3. Is anyone using this only with the internal drive? How much space do you have for storing recordings?

4. Any problems connecting "pro" gear up to the 1/8" audio jacks?

5. Is the "cut and paste" splicing feature really usable for a master (i.e. click-free)?

6. How usable are the built-in effect algorithms? They appeared to have no user controllable parameters, is this true?

7. Any "gotchas" you have encountered? Crashing problems?

Response by E-mail preferred.

(John Hutchinson) writes:

>Why doesn't prying it open work? I know it can be done as a) I used to own
>one and b) it's the very same plastic cartridge that was used on the original
>Magic Sack and Spectre 128. Granted, it's a bear to open but you can do it.

I was not applying enough force. Here's a summary of the responses I
got; I got other replies from Joseph Charles Bossolini (bossoj@rpi.edu)
and from jc (cummins@osuunx.ucc.okstate.edu).

There are three glue points (you can see them as the feet on the
underside of the cartridge) which take a bit of prying to get off.
(My problem was that I was just too shy and didn't apply enough force.
My problem with opening the cartridge was just shyness; I was
expecting it to pop open with a little force, and it took more than a
little.

Remove the circuit board; on the underside is the battery.

Unsolder the battery contacts from the circuit board and from the battery.

Replace the battery, and resolder.

I was able to find a replacement battery of the right size,
but jc suggested using a flat battery clip so you can use a battery
of a -- ahem -- more contemporary type.

thanks to everyone!

Bad enough that there is pressure for me to give up my TT and
get a PC, my TTM195 just went TU this morning. I'm now using
a scrounged AAMAZING 14" VGA monitor to work.

Does anyone know who could service the TTM (made by Phillips) in
Ottawa, Montreal or Toronto?

Anything is possible with the right adaptor, Eric. I suggest you contact the
hard drive experts at Toad Computers (800-448-8623 or 410-544-6943) and ask
them what they can do for ya.

If there is a similar situation in the USA, and your video has an analogue
input, called 'Composite Video', "CVGB' or 'CVBS' input, then all you need
is a video demodulator, which I don't think is a very expensive item.
Also, any V.C.R. will do the job.

As I mentioned, though, the situation may be completely different in the USA.

Used ST Informer last night and am trying to get in touch with author, Darek (got hold of some bank in Canada, will try his other no. later... :--)), but I am really excited about the possibility of running .ARC files on this simulated 800. It was cool to see BASIC come up! Anyway, does anyone know how to create a virtual disk to hold the .ARC file on, since I don't have a special cable to run from the ST to an 8-bit 1050 or whatever disk drive. (In fact, got no 8-bit drive, at the moment...)? Is Darek alive? What do you all think of this program? I want to get my hands on his $10 manual for it, if possible. Thanks for any tips. Finally, thanks for all the tips on editing GNU source files - really helpful! Long live ST and 8-bit machines!

2162. Falcon compatability/user group/ and chat!

Newsgroup: comp.sys.atari.st
Date: 1993-11-19 21:21:56 UTC
From: esvkq@csv.warwick.ac.uk
Message-ID: <2cjddk$n0s@clover.csv.warwick.ac.uk>
Source record: 198137

Ok then guys. Someone mentioned that the magazine to the Falcon
Owners Group (FOG) had a list of 100's of falcon compatable games and
what you had to do to get some others to work. ie using backward,
settings etc. I thought that this list originally came off a BBS anyway
so if someone has seen this anywhere could they please post it in this
news group. If not then whenever I return home I will get Rich to send
me it on disk and I will post it. If anyone out there knows Richard Davey
at whichever University he is at, then get him to post it.

The Falcon Owners Group actually produces several magazines a
year with a lot of information that is in few other places. Sorry to
sound like an advertisment but Falcon owners will probably like
it and if you are any good then contributions are always loved. The
address is:

THE FALCON OWNERS GROUP(FOG)
10, OAK DRIVE
PORTISHEAD
BRISTOL
BS20 8QS
ENGLAND

It might take a little while for you to get your replies as
the editor of the group's magazine is at University in term time and
all mail to this address will be forwarded. I will get full details
to this group in the near future and post them ok?

Just to give you some idea of the things this group learns..
You have all seem the picture of the 'new falcon case' in ST format?
Well apparently it was all a con and those little XXXXX at ST Format
took a picture of a TT case and just retouched the photo using a paint
package to give it a slight falcon feel. (Did they paint the keys dark grey?
I have not actually seen the magazine myself yet as none of the shops
in Warwick seem to stock ST mags). I gleemed this little bit of info from
the guy who runs FOG just before he left for Uni. Apparently he met
a couple of the ST Format employees and they told him what they intended
to do! This I must note was told to me weeks before the offending
ST Format came out.

Richard (FOG ED) is also the only person I know who has
played the Jeff Minter game for the falcon. I will try to get in
touch with him and get him to post a review of it. There are rumours
of three games being packaged with the falcons analogue joystick and
having the jeff game (lama zap?) as one of them. Has anyone seem the
joystick? It is meant to be a very large affair looking like a numeric
pad on acid! See the next FOG magazine for a review.

That's it for now but please feel free to mail me if you wish
to ask anything. Please note though that I do not actually own a
Falcon yet (only a ST) so any in depth questions on the machine itself
will have to be posted as usual.

Yours,
ROB....

So, there I was, minding my own business looking through the L.A. Times, when I went past an ad for the Good Guys (an electronics chain in the L.A. area) and something caught my eye. They are advertising the Jaguar for $250 although I think that is the regular price, not a sale. The ad doesn't say anything about starting next week, just that prices are good through the end of the month, so this may mean they have them now. If only I had an extra $250 on hand...

Andrew (elvis@watserv.ucr.edu)

Yea, Rat Soft is Great but the support sucks!...There is no body to talk with voice if you have a bad problem. Whenever I posted I problem the Author was always unfriendly about complaints about Rat Soft. When you are running a BBS support is crucial. Rat Soft excels in the Software but fails horribly in support.

2165. help with my 14.4k baud modem

Newsgroup: comp.sys.atari.st
Date: 1993-11-19 21:53:56 UTC
From: bnutter@silver.ucs.indiana.edu
Message-ID: <CGrE5x.Fow@usenet.ucs.indiana.edu>
Source record: 198142

I just got a new modem. It's an Intel 14.4k baud fax modem with all the fun compression/error correction stuff.

At first the modem would connect but then I'd get no response. I finally got it to work by setting the flow control of the modem to XON XOFF bidirectional. I have no idea if this is right or optimal, but it seems to work. In fact, every setting that I change the flow control to seems to work except for the factory setting, which seems a little suspicious to me.

Anyway, the main problem seem to be that I can't get my modem to work faster than 9600 baud. When I select RS232 to be 19,200 baud the modem says CONNECT 14,400 - however there doesn't appear to be any increase in speed and it takes the same amount of time to cat large text files. There also seems to be no difference whether compression is on or off.

So is this a limit of the Atari's hardware, or is it my software? I've tried a very old version of Flash and Uniterm, both with the same results.

On a related note, is PPP or Slip available for the Atari?

2168. Thoughts on ATARI...

Newsgroup: comp.sys.atari.st
Date: 1993-11-19 23:49:19 UTC
From: chan@pyramid.unr.edu
Message-ID: <1993Nov19.234919.22353@news.unr.edu>
Source record: 198146

Interesting how Atari has evolved over the years with the
ST line of computers.

It's been awhile since I've been on this newsgroup (oh, about a
year or so).

To tell you the truth, I would have never have thought of switching
platforms after buying my 1040ST in 1988. Back then, it was a buck
per meg. Wow, and those dazzling colors.... (compared to my
Apple IIe dull green monochrome).

A lot of my friends and people I met along the way were impressed by my
1040ST. Most of them followed in my footsteps and bought an ST. All
those games...

Of course, along the way, there were the critics and those who said the
ST line would eventually die away. I, along with most diehard fans,
ignored the criticism.

Eventually, I moved up (if you can say that) to a MegaSTE4. Not much
more to offer (as I eventually found out) except internal HD, some
extra ports,....

Where did the support from ATari go? Or were there any? Like the MegaST,
the support for my MegaSTE4 was never there.

So, after many days and nights of agony, I decided that it was time
to switch over... (after about 5 years of support for ATARI!).

Yes, I broke down and bought an IBM compatible. Prices, you must admit,
dropped for all computer lines (because of slow sales).

I still long to play an ST game...

I don't know what really happened to ATARI. They kepted changing their
line of computers, lacked support, NO advertising, "Atari ST who?",
and tried to get away from their "game" image.

I should have invested in ATARI stock when it was about $1 - $2 a share!
Damn. Ever since the announcement of their 64-bit game machine, their
stock has jumped to (stock quote from another person on this newsgroup)
about $12. Wow, I'd be rich.

Hey, now I get the chance to go back to Atari by buying a Jaguar. I
look forward to it very much! Isn't it ironic that ATari is going
back to that image? I think that it is the right way to go!
I will bet that ATARI will sell at least a million in 2 to 3 years!

I want my Jaguar!

Later....

Kaho

Does the group "rec.games.video.misc" ring a bell? You'll find CD^32 and 3DO people there too.

>If I write an article, it can be read all over the world in 10 minutes,
>so my conclusion is that there ARE NO JAGS UNTIL PROVEN THERE ARE!

A few scattered reports of Jaguar sightings have been posted. The general consensus is that the units were shipped out of Sunnyvale on the 15th of November, and will reach stores next week.

The only way I know of to do that is with a JRI Genlock system and the
quality is beautiful! This not only makes it "TV" but also lets you overlay
graphics on the screen. It's Mega ST only. Want mine? :-)

ms20

I know of two programs called Pianistics, and Guitaristics that I think are instructional programs. I don't have either, but have been thinking of getting Pianistics... you might want to give them a try.

2180. Falcon Audio and Video

Newsgroup: comp.sys.atari.st
Date: 1993-11-20 06:10:08 UTC
From: fnjah@aurora.alaska.edu
Message-ID: <1993Nov19.211008.1@aurora.alaska.edu>
Source record: 198055

I was looking at an old issure of Keyboard Magazine from last January
and it says in a review of the Falcon
"Animated color icons, 3D scroll bars... The System Audio Manager lets you
assign sound files to various activities, such as key presses, file
copying, and so on... The color graphics capabilities are nothing short
of brilliant. The Falcon accepts external video sync for high quality
genlock. A unique overlay mode makes adding titles and special effects a
breeze."

I don't have a System Audio Manager and my Falcon certainly doesn't have
a video or sync input. Does anybody know if these things are available somewhere
or were they just on a prototype and then scrapped?

2189. ADMIN: Seeking new moderator for comp.{binaries,sources}.atari.st

Newsgroup: comp.sys.atari.st
Date: 1993-11-20 16:52:04 UTC
From: koreth@spud.Hyperion.COM
Message-ID: <2clhvk$ipf@spud.Hyperion.COM>
Source record: 198066
Cross-posted to: comp.binaries.atari.st,comp.sources.atari.st,comp.sys.atari.st

I think it's time for a new moderator for the sources and binaries groups.

For some time now, as everyone is no doubt aware, I haven't been able to devote as much time to the groups as they deserve. It looks like that'll continue into the future, and it's not fair to all of you that I continue to hang on to moderatorship when someone more active could be making the groups go somewhere.

So: I'm now soliciting volunteers to take over the groups. I think it's best if one person moderates both, simply because most of the stuff in comp.sources.atari.st arrives packaged in with binaries, but of course I'll consider offers to take over just one group.

Requirements:

- Willingness to devote several hours a week, or more, to the groups.
- Some understanding of how Usenet works from a technical standpoint, enough to modify and maintain the posting scripts and other tools.
- Enough disk space to handle the occasional multi-megabyte submission.
- Net access that won't go away (i.e. no students who lose their accounts or don't have access to them over the summer.)

Internet access is a plus, but not required; if someone without Internet access takes the job, naturally, outside arrangements will have to be made if the archives are to be available via ftp.

Please reply to koreth@hyperion.com if you're interested in the job.

Thanks to everyone who's participated in the group over the years. It's been fun.

-Steve

2191. Monochrome detect signal problem (TT)

Newsgroup: comp.sys.atari.st
Date: 1993-11-20 17:45:08 UTC
From: chriso@vigsun1.larc.nasa.gov
Message-ID: <2cll34$qpn@reznor.larc.nasa.gov>
Source record: 198065

Hi folks,

I want to connect my TT in High Res to an EIZO 6500M. This
monitor has the appropriate ECL input, but (of course) no
pin that leads the monochrome detect signal, which is crucial
because the TOS and some applications query that signal.

I don't want to buy a switchbox for that, as it is very expensive
(150,- DM i.e. almost 90 US$).

Does anybody have an idea how to create that signal?

Please reply to me by e-mail. Thanks in advance for your help

Chris

2192. Geneva

Newsgroup: comp.sys.atari.st
Date: 1993-11-20 18:53:32 UTC
From: ogal@cix.compulink.co.uk
Message-ID: <memo.2023@cix.compulink.co.uk>
Source record: 198067

I just got Geneva 1.01 and am happy to report that the problem I comlained about a while ago (with my form_button) is now solved. I am having other problems though...

Geneva does not like ScreenBlaster. I tried running Geneva before and after SB. Curiously, it runs ok from the desktop.

Geneva generates far too many redraw messages. For example, topping a window causes a full redraw of the window, even if it was visible anyway, or if only part of it needs redrawing. This is not the case with MTOS or TOS 4, or any other TOS version if using WinX.

Ofir ogal@cix.compulink.co.uk

> correct symbols to the keys? Is this a universal Falcon thing?

The Falcon has non-volatile RAM settings to tell the machine what
nationality it is, what monitor you are using, PAL/NTSC modes and so on.
Your machine is probably set to the UK mode so Uniterm works fine. Get
any NVRAM configuration program from a.a and set it right.

I've been using ST MicroEMACS 1.8 that came with MWC. It crashes
randomly, and once crashed. never works again (except from TOSWIN) when
installed as TeraDesk's Editor. I'm hoping a new one will make it stable
from both TOSWIN and TeraDesk (as the EDIT function).
I'll look for 3.11, thanks.

I mean something that would help in porting a GEM application to a TermCap
TOS-based application. Actually, a GEM version of curses also sounds good.
But it would be nice to able to create a Termcap version of a GEM program
without TOO much trouble, that way you could port a GEM application to
DOS or Un*x without too much trouble. You could character graphics and
line drawing symbols for the widows, the menu bar would just be text like
a DOS app, etc. Is it possible?

That's what puzzled me. It said that the built-in delete function was not
found. Come to find out, delete is really a small function that calls mfree()!
Not exactly the most efficient way (function calling a function), especially
since I don't think a library function can be inline, can it?
t

I never thought of doing that. It makes sense though to get it from an
OS/2 or Un*x section or whatever, since it should all be the same.

ASCII docs on umich would be great (Postscript would make my FX-85 crunch
for a few hours, and I'd have to find Ghostscript).

==========================
Otherway round. Multisync sync to various fixed scan rates. Multiscans sync to a
range ie 30-50.
==========================

Sorry guy, your a bit mixed up. There is no such distinction. MultiSync is
a brand of NEC multiscanning monitor. There are a few SVGA and other monitors
that only sync to specific scan-rates, and you should beware of those. My
NEC MultiSync 3D definitely scans to a range (a fairly wide one) and can be
used on just about any computer (and looks great on them all!). MultiSync is
just NECs name for their multiscanning monitors, there is no technical
difference, well, at least not any implied by the name.
```

```
============================
What I would like to know now is if the Atari is capable of reading either
the NeXT or MAC format from the native atari setup (ie not using Spectre).

============================

Well, no, it can't. But, if you were to write a MiNT file system driver
you could read MAC hard disks and MAC 1.44MB floppies (w/HD drive, noti
800K GCR disks). I'm not sure what format the NeXT uses for its floppies,
but I am almost positive it can read/write FAT filesystem floppies.
Again, top support the NeXT format you would need a custom MiNT XFS driver.

I wonder, has anyone written a network driver as an XFS file?

.

Message-ID: <CGt8I1.FzK@sdf.lonestar.org>
Source record: 197767

```
===============
Just obtained GNU Chess from net. Works fine, but would like to
modify C source to have a GUI front-end. Which brings up the
question - Do you need to reformat or use a special editor or
text processor to look at or modify GNU ascii files? I noticed that
Doc or C files etc.. lines look out of "alignment". A long time
ago I remember hearing that you had to use Tex or some program to
reformat GNU files? Thanks for any advice
===============

First, there is already a GEM front-end for GNU Chess that uses multiple
windows. Its a bit buggy and doesn't always redraw right, but it does
work, and is fully integrated.

You can use any ASCII text editor to edit GNU source files. TEX is
used for teh GNU documentation for lots of formatting (or in case you
want to publish it, TEX is capable of doing very high quality output).
If the files look strange, then use another viewer/editor or write
a little program to change all the newlines into carriage return/ newline
sequences.

Here is your first error. Should be ctr, not cnt, you should also
think of using a for() loop, or while (ctr++ < 5) .

> {
> printf("%s\n", fname);
> ctr++;
> }
> printf("%c",BELL);
> return;
> }

>When I try to run the source through HCC.TTP I get this error:
>
>"warning in D:\DATAFILE\CPRGS\C2FIRST.C (20): Function should return a value"
>-----------------------------------------------------

You need to return a value, just like it says. When you declare "main()",
what you are really saying is "int main (void)" <>. Anyway, you
must either make main explicitly not return a value (which may be more
efficient when you don't need a return value, as above) by using
void main() {
or you can specify a return value for main to return and keep main the way
it is. You would do this, like so :
return 0;
}
```

Take your pick. Either returning a value, like you declared for main (anytime
you have a function and don't specify a return type, the return type is int).
Or, you make main() return void. Returning void may not work for all
compilers so I would suggest you leave main the way it is and replace :
return;
with the following code;
return exit(0);
This makes sure the compiler sees a return statement, and also calls the
standard exit() routine to do cleanup, and it works with compilers that
don't like you returning 'void' from main.

>Can someone familiar with Heat-n-Serve (or who just plain knows :) give me some
>insight here?

Look through the .S files that came with HSC. You should notice that one
of the files contains a comment that says something like "the following is
self modifying code, do not mess with it". Self-modifying code has been
a nasty thing for quite some time. I suggest that switch compilers before
releasing large projects. Self-modifying code may break on just about
any CPU with a cache, but I'm not exactly sure (MegaSTE, TT, Falcon, AdSpeed).

Good luck.

2203. Re: help with my 14.4k baud modem

Newsgroup: comp.sys.atari.st
Date: 1993-11-20 23:25:09 UTC
From: u1418@sparc24.cs.uiuc.edu
Message-ID: <CGtD1y.Bsl@sparc0a.cs.uiuc.edu>
Source record: 198072

I too just got a 14.4kbps modem. Here are some interesting things about 14.4kbps and ataris:

The factory default on your modem is (probably) to use hardware handshaking. There are problems with some STs (I'm not sure exactly which, but my Mega STe is definitely one of them) with using RTS/CTS flow control at high (any?) speeds. At first, with the defaults, I had no real problems unless I was catting a multi-screenful file, in which case all but the first couple screens would be heavily seasoned with garbage. Turning off hardware handshaking fixed this, but I still get a large number (maybe 1 in 50) of bad blocks with xmodem transfers. I just installed a patch to get RTS/CTS working, but Usenet distracted me before I could test it out. <g>

QUESTION, everyone: I've just installed HSMODEM1.PRG from the conNect2.2 distribution from the umich archives. I'm having some trouble with the German docs - what is the difference between HSMODEM1 and FASTSER? (both included in the same distribution, both intended to fix the RTS/CTS problems, both presumably available by themselves) Is there any way to convince Flash 1.6 to connect at faster rates than 19,200bps, or does one need to use special hardware? (seem to say first that you -do- need more hardware, then that you -don't-. Clearly I'm missing something.)

You (Brandon) also asked about SLIP: There is some stuff at umich called ka9q. Seems to be what's necessary, but I won't be able to test it until midweek next week. The ka9q_doc.lzh file seems to be documenting the protocol and it's use with radio modems in great detail, but there's some documentation in the ka9q_st.lzh file that is specific to the ST. I haven't finished wading through it all yet. There's a LOT of it.

The issue with speed: your modem is probably sending text faster than the ST can display it. Try timing file transfers and see if you note a difference there. (I sure did. this is *MUCH* better then good ol' 2400 baud. <g>)

Hope some of that was helpful, thanks to anyone who can answer my hardware handshaking patch queston,

~Adam

You get system audio manager only with hard drive falcon packages and yes, it
can accept external sync, but there's no dedicated port for it. You'd
probably have to do it through the dsp or the lan or something.

2216. Falcon Owners Group/ATARI UNITED!

Newsgroup: comp.sys.atari.st
Date: 1993-11-21 05:13:43 UTC

ATARI UNITED! PRESS RELEASE

For immediate release:

Mountain View, CA--November 21, 1993--As part of its ongoing effort to unite Atari owners with support groups and developers, ATARI UNITED! wishes to announce to North American Atari owners the existence of the Falcon Owners Group. The Falcon Owners Group was originally established in March of 1993 and is based in the United Kingdom. The Falcon Owners Group (FOG) provides support for Falcon owners through several services and discount prices for the Falcon specific shareware library which is handled by a professional outfit and accepts international and credit card orders. The Falcon Owners Group Magazine is produced four times a year and distributed with a high density cover disk. This mini-magazine is a legal page sized compilation of useful information concerning hardware and software for the Atari Falcon030. In the 27-page September issue, reviews of Ishar 2 and new Falcon shareware shared space with some extensive Q&A and an ST software compatibility chart. There are a few noticeable typos in the magazine, and little in the way of graphics, but it is rather well laid out for such a new publication. They also provide two BBS for members in the UK (Tel 0454 317047 or 0454 881095) providing Atari message bases and Falcon030 software downloads. While some of the information presented in the magazine may not be new to those who spend their free time online, FOG exists as an effective repository of Falcon specific information and is nearly a complete stand alone source for a Falcon user. Richard Davey, the Club Chairman, is actively seeking the establishment of a North American branch to the FOG, and anyone interested in founding a US or Canadian site is strongly encouraged to contact FOG and request the information needed to spread Falcon030 support to and from the UK.

The only unfortunate side to all this is that they do not have an Internet address yet and while the Membership is only 16.99 pounds for Europe, people in North America will have to pay 20.00 pounds. They accept Visa and Mastercard, or checks made payable to the 'Falcon Owners Group' and sent to:

FOG
10 Oak Drive
Portishead, Bristol, Avon

According to the authors, the next release of Mag!x will have MiNT
compatible
pipes and a filesystem driver interface.

2218. Re: zflash zmodem recieve program

Newsgroup: comp.sys.atari.st
Date: 1993-11-21 06:38:54 UTC
From: u1418@sparc24.cs.uiuc.edu
Message-ID: <CGtx4v.Ey0@sparc0a.cs.uiuc.edu>
Source record: 198087

In a fit of madness, I wrote:

>I just got zflash version 1.21 from umich.
>It transfers files perfectly (I just got 3 cps short of theoretical
>maximum on a large text file :) but after it's finished, and the
>downloaded file is closed, it comes up with "error #102
>PC>$000000". It happens only after the last file in the batch is
>complete, and after I click `abort' the program exits back to its
>little terminal mode normally. Anybody got an idea what's going on?

>Also, it doesn't restore colors after it leaves, which is annoying.
>Does this normally happen? Is there a way to fix it?

I have now also gotten an error #103, when I was downloading a
duplicately named file, before the batch was done. I checked off the
warn overwrite option, but I think aborting the transfer in the middle
without any indication of why is a bit excessive.

Anybody have any experience/ideas? I really don't want to give up
flash; It's still fast, it's still got a great text buffer, and it
doesn't hem you in with funny fonts or grab big chunks of your screen
with gem windows like conNect and storm. (hey, some of us like to use
COLOR monitors!)

Thanks for anything,
~Adam

2219. AEO Issue 19.. sorry about the delay. its here now.

>Ofir ogal@cix.compulink.co.uk

What a load of Rubish, Connect is far to slow, no medium Res, support,
no 80 columns with a standard text..

Note: most people here use ST/STE's with colour monitors, Connect is useless
with this type of System....

Give me STORM or Flash any day....

Roger.............. sheppard_r@kosmos.wcc.govt.nz

2221. WANTED: A new version of GnuChess

Newsgroup: comp.sys.atari.st
Date: 1993-11-21 15:55:56 UTC
From: peterc@a3
Message-ID: <1993Nov21.155556.4597@nessie.mcc.ac.uk>
Source record: 198095

Hello all,

I just downloaded the chess programs available from umich archive
and of the three there only Gnu Chess seems worhty of running on my
520 STFM, Krabat seems too small to be possibly any good and Warwick
Allison's graphical version needs a 1M machine.

The problem is this Gnu Chess dates from 1988, i.e. it's ancient.
Has everyone out there compiled a newer version of G C (I believe the
latest is 4.0.62) to run on a half-meg machine with a 720K drive?
If so, could they contact me by email.

(I don't think I need a running version with the entire opening book
which is enormous.)

Peter Chang - peterc@v2.ph.man.ac.uk

2222. Re: help with my 14.4k baud modem

Newsgroup: comp.sys.atari.st
Date: 1993-11-21 16:06:15 UTC
From: jmcdonal@garnet.acns.fsu.edu
Message-ID: <2co3ln$ktr@mailer.fsu.edu>
Source record: 198093

Here's my settings for my 14.4K modem:

at&v

ACTIVE PROFILE: B1 E1 L2 M1 N1 Q0 T V1 W1 X4 Y0 &C1 &D2 &G0 &J0 &K3 &Q5
&R0 &S0 &T4 &X0 &Y0 S00:000 S01:000 S02:043 S03:013 S04:010 S05:008
S06:002 S07:050 S08:002 S09:006 S10:014 S11:095 S12:050 S18:000 S25:005
S26:001 S36:007 S37:000 S38:020 S44:003 S46:138 S48:007 S49:008 S50:255

With these, and the "Flash II" program, I am able to get a Carrier of
14.4, and a Connect of 19,200. The compression protocol used is LAPM
(V.42 LAP-M Error Correction). I don't use any of the serial fix programs
in my AUTO folder, since the program automatically corrects for that.
There's supposed to be an upgrade fairly soon that should allow for higher
modem speeds; I'm anxious to test it out and compare the downloading times.

I hope this helps.

2223. MiNT mailing list

Newsgroup: comp.sys.atari.st
Date: 1993-11-21 16:08:34 UTC
From: weiner@terminator.rs.itd.umich.edu
Message-ID: <2co3q2$912@terminator.rs.itd.umich.edu>
Source record: 198094
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

In response to the recent talk of the mint-mailing list. There
is such a list which has been established for those involved
with improvements and additions to the MiNT kernal and related
software. It is *not* a MiNT help line for beginning users to
ask questions. That is best left here, in comp.sys.atari.st.

If you feel that you would like to be added to this mailing list, please
send me mail. I typically don't read any news that doesn't have the
words atari.archive in the subject, so posts will most likely be
ignored.

In addition, there is a list for people directly involved with
ip additions for MiNT. I do not maintain this list, but will forward
requests to its maintainter.

Cheers,

Message-ID: <1993Nov21.195227.14767@ibr.cs.tu-bs.de>
Source record: 198008

I can get a cheap MFM drive which I would like to attach to my RLL controller.
I have done that with another MFM drive before and that worked pretty well.
Do MFM drives generally work with RLL controllers, and if not, do I risk
damaging the drive if I try that?

>and isn't very flexible.

Sorry, if I didn't get you right, but of course the prirority is changed
during runtime.
If you top an application's window, this application will be assigned the
highest priority immediately. Futhermore, you can give fix priorities to
processes which are waiting most of the time. I.e. my syslog daemon runs
always with priority -15.

Isn't that flexible enough ?

Cheers, Ole

From: swhatley@blkbox.COM
Message-ID: <CGvBuq.14p@NeoSoft.com>
Source record: 198003

WOW!!!! What a great program! I have just few questions.

Thie instructions mentioned that TOS 1.0 and 1.2 systems needs a STARTGEM program to be able auto-boot the Tera. I can't find this STARTGEM at a.a.u.e,. Where can I find it and do I still follow the instruction for automatically booting Tera on startup?

I like white on black windows. Whenever I exit a program and return to Tera the colors are set back to black on white. I use XCONTROL's color setup module. How can I prevent this from happening?

Thank you, Wout Klaren, for such a fine program.

Later,
Steven Whatley

WW>Wolfgang

I knew those kind words would get some action ;> But seriously
Wolfgang I wouldn't have said it if I didn't mean it (I'm sure Ofir
feels the same way) I bought Flash (old and new versions) and have tried
almost every telecomm prog out there for the Atari and the best without
a doubt BOTH in features and ease of use is Connect. And now with the
manual on the way I can find out all the tidbits I've been to lazy to
figure out (you helped me a ton with that advice on how to set-up
multiple d/l protocols-thanks)...

--Dirk--

Anyone reading this on an Atari go get Connect and register it, you
won't be sorry.

And Wolfgang when's that QWK reader going to be ready?? :>

Hello y'all.

I have a few questions about the Jaguar:

1. Is this initial and first group of Atari Jaguars free of problems
and bugs and whatnot?

2. If [no] to the above ?, then should one wait for a second or
third version of the ATari Jaguar?

(Remember the slight differences between the old and newer
ST's? The Lynx/Lynx II? etc...)

3. What is the order line # for the Jaguar (Atari's Sunnyvale #)

4. What is the # for their customer support/general questions line?

5. And is there a FAX # for questions?

Thanks!!

Since I put ConNect 2.20 on my MegaSTe I've been able to connect at a
'claimed' 57.6K baud to the modem pool at work..... (claimed becaue
the telebits at work connect to our terminal serviers at 38.4K baud so
that extra 19.2K baud is going to waste....

It came with TWO fixes for the RTS/CTS problem so, due to a lack of
documentation as to their purpose I put BOTH in my AUTO folder....

Seems to be working.... I no longer have any problems with the higher
speed (I am using the modem 2 port with the cable that came with my
modem (A Supra Faxmodem v32bis.))

The ONLY strange things I experience have to do with vt220 emulation
when connected to a VAx running VMS 5.5-2. I have to do a

$set term/inq

AFTER logging in..... even though my login.com already does that....
if I don't most programs don't recognize the application keypad ......

Also, when in an editor onthe VAX the screen isn't handled correctly
(but is on an Ultrix machine...)

Oh yeah..... the ONLY thing I did to set up my modem was an

AT&F2

Just a question Warwick, can you honestly say that 100% of your software
is either originals, or PD/SW?

I'd be surprised if anyone didn't have *any* pirate software!
(Some people I know who are very anti-pirate still have a couple of titles,
illegal ones....)

I'm not condoning it, nor am I accusing, it's just that I've never
met *anyone* that didn't have *some* pirated software!

Why are comparisons always done with Screen-Accelerators? Not everyone
has the things!

Without accelerators, Connect and Storm have virtually identical
terminal output. (On this 8Mhz machine anyway, I'm not sure about
a Mega-STE etc.).

As for Roger whinging about Connect, DON'T USE IT IF YOU DON'T LIKE IT!

Why is it everytime a new comms program turns up, everyone and his dog
goes into 'this comms is better than that comms' mode!? Just try it
all and use the one that suits your needs best!

For those that aren't in the know by the way (slightly off subject).

Aaron Hopkins (The author of FreeZe Dried Terminal), is back, and apparently
just about finished work on FZDSTerm v2.30. Which is basically 2.20
but more or less fully Falcon compatible, with the bugs fixed. (And I
presume a couple more features, hopefully he's used the VT-100 code I
gave him!)
A 3rd party has taken over key distribution (Their name escapes me, but
they are a commercial outfit). So work on that is progressing.
Version 3's release date is still unknown, but due to the rather major
rewrite that is apparently going to occur, it could be a while, it may
end up being another GEM-Terminal program..... (Multi-TOS has not
done us ST/STE users any favours - obsoletion has just about set in 8-(

Just for the record, I'm using neither connect (No hard-drive and only
a 2400 modem on an ST), Storm (doesn't like my modem), FZDSTerm (Takes
too long to load, I want SPEED!), or Flash (Works okay, but I can't
be bothered with requiring external programs to transfer files etc., at
least, not in the way required!).

I'm not saying what, so there! 8-)

The software on GEnie sucks big time. I tried to find the magazine
there one time with no success. I just get it from the internet
mailing list. Much easier, I have to do nothing but wait for it
to arrive. Might have to get that alt group going again with it.

Oh, and don't ask me how to get onto the mailing list, I don't know.
I did it a few years ago, and I don't even know where it comes from
at the moment, I extract it from mail without the header.

Craig.

GNU tar needs a filename of =TAPE in order to go via TapeBIOS to the
streamer, eg
gtar cvf =TAPE files...

Or, you can put the default device in an environment variable (can't remember
the name, and I don't have the docs to hand), so you then type
gtar cv files...

I have a Viper streamer, and it works well with TapeBIOS / gtar, under
both TOS and MiNT.

FD>with Gemar with no luck (not that fluent in German)
GEMAR has got the english redmes and rsc since Version 2.0.

I don't know, if it is available on ftp-Server yet.

GEMAR works fine with a viper 5150.

Some words for GEMAR 2.0:

-2.0 does not work on Falcons, look for 2.01
-2.01 has a little bug in writing the TAR-Headers: the calculation of the
checksum is wrong, so the archives can't be restored with TAR
In the next version (comming soon), it will be fixed.

: documentation and possibly example start up file to go with it. Can
: anyone point me to anything appropriate.

Grab the (unix) sources for Jove. If you will have unpacked the archive, you will find in a subdirectory doc all the docs. Presumably they will also apply - more or less - to your port of jove.

"cmds.doc" contains the online help. "system.rc" contains the system wide initialization file. And finally "teach-jove" is a tutorial on jove.

All these files should be copied to the directory "/usr/local/lib/jove". The exact name for this directory may be different for you - it is hardcoded inside jove. "system.rc" must be renamed to "jove.rc".

For using the tutorial, try "jove teach-jove".

:
: Also what is everyones favourite Emacs clone?? (GNU Emacs is just a
: little too big to run for my system. :-((( )

JOVE!!!
It runs on many platforms and is more powerful than micro emacs.

Currently, I am doing my own port of Jove because I found some minor bugs in an already existing port. In this port, the directory named above is no longer hardcoded. Thus you can redefine it by setting some environment variables. I am nearly thru with the port - I am already using it all the time. However there are still about 2 or 3 very minor bugs that I would like to fix before I put it on an ftp archive.

Presumably, the port will be ready in about 2 weaks. I'll put it on "ftp.uni-muenster.de". Oh, I forgot to mention that it will probably ONLY run under MiNT!

Hans

The Falcon030 has a SCSI2 port as standard. So why are all the hard disks 'only'
with SCSI 1 connectors. Most SCSI 1 transfer upto 1-2 meg per second but I had heard that
SCSI 2 gives about 10 meg per second !

Surely some people want/need the extra transfer speed ??? Don't they ???

I imagine most people who buy Falcons don't buy them to play games, more to do some real work. I tried a couple when I got mine (Dungeon Master, a couple of flight sims) just to see and that was it. I've now bought Transartica & Ishar 2 (falcon versions - 256 color multichannel sample sound - great stuff!!).

Probably not. The only virtual RAM prog I have seen is outside. That uses a chunk
of real ram to do the paging in and out. Plus not all programs recognise the
extra memory. Much better to get 4Mb AND a virtual RAM driver - if you can afford
it.

Try the NOVA Card (available e.g. at Lexicor). I'm using it since May with my MSTE and a 15" AcerView Multiscan. It's fast enough (but there is a new version, the VMEplus with ET4000/W32, which is faster) and not so expensive. In Lexicors directory at world.std.com you can find Infos and GemBenchmarks. I'm using a 32k colors card, but now there are only 16M color cards for the price of the old 32k cards (in Germany).

Just for the curious, I managed to catch the end of a Jaguar
TV COMMERCIAL this weekend. I didn't see much of it, but I noticed
they pointed out the 64bits, and at the end it looked like some
kids were heading into a "video room" (dunno what to call it).

It was shown during an episode of the TV show "Highlander."

-it doesn't DISPLAY 80 columns with standard text size (try dropping
the system font down to 9 or 8 - it's still very readable and fits
well in medium res; of course, I wouldn't recommend this if
you're using a TV rather than a monitor)...

>Note: most people here use ST/STE's with colour monitors, Connect is useless
>with this type of System....

Useless? Maybe a little visually cumbersome (i.e. your complaint of
not everything being visible in medium res), but it is still fully
functional in those res's. You can even have CoNnect act as
a remote host for you (yep, even in medium res)...

>Give me STORM or Flash any day....

You're wish is my command ;-)

Rob

...Roger, didn't we have this same series of messages a couple
months back? maybe we should just report those messages :-)
If you notice, I'm not trashing your chosen terminals, I'm
only pointing out some of your points so they don't communicate
the wrong things. In any case, CoNnect's shareware (as is STorm) so
you can try it out, and decide from that point whether it's worth
keeping or not...

(and yes, I have Flash 1.6 in my collection - an actual disk of it,
but I personally haven't needed it - mileage may vary)...

This is a 'reply' to the guy who claimed that 'everyone has soem pirated software'

I DON'T. NOT EVEN ONE.

Does that mean that I never had, or that I never will? Hardly. In fact, although I have thousands of dollars worth of software I only bought ONE program before trying a 'pirated' version. I am now in Japan, so I don't have any more 'connections', but when I return to the 'real world'(TM) I will continue to try before I buy. Is it ethical? I don't know, and really don't care. The fact remains that EVERY PROGRAM that I _USE_ I paid for.

2266. MULTI WINDOWS/MODEM Questions.

Newsgroup: comp.sys.atari.st
Date: 1993-11-22 14:21:59 UTC
From: hallvart@ifi.uio.no
Message-ID: <2cqhu7$bpr@holmenkollen.ifi.uio.no>
Source record: 198028

I'm thinking about getting hold of a modem soon for my Atari STE.
I have already downloaded the "connect" software, and tried it (without a modem unfortunately), but it seems very professional and I hear several people on the net giving it a "thumbs up".

Right now I'm using the computer terminals at the university, using UNIX and X-windows i believe it's called.
It is possible to connect via modem to the university, and I was wondering if I could use my STE in the same way as the terminal at school (although a little slower I suppose)?

I would definately like to have several windows, so I can for example "talk" with someone and if I get email, I can get into EMACS and read the mail without dis-connecting the person I'm "talk"ing to. Would this be possible at all, or can I only do "mail" OR "talk", and have to leave one to get to the other.
I would also like to read "News" and sometimes download files directly to my STE at home, but this isn't a problem really, as we have MS-DOS compatible disk drives at school, so I can just bring a disk with me when I'm there (so I save the phone cost downloading).

If all this is possible, what kind of software should I use, and any reccomendations for modems? Anybody using such a system as I'm describing? Any help would be greatly appreciated!
By the way, is there a user manual for "connect"? I don't seem to remember any "readme" type
user manual with it. By registering, will I get a printed ENGLISH user manual?
Thanks.

Hallvard Tangeraas, Oslo, Norway

The kids were going up the "video games elevator." They stopped briefly at
the 16th floor, saw Sega and Nintendo, and expressed their displeasure. They
then continued up to the 64th floor and went nuts.

I have been having trouble trying to get several Demos I've downloaded off
a.a.u.e. to work. These demos, going by the name of:
ancool1.msa
ancool2.msa
buggin1.msa
buggin2.msa
choiceg1.lzh
choiceg2.lzh
I have a U.S. model Mega 2 ST with 2 megs, color monitor, and internal
Quantum 85 meg hard drive. I have been using MSA for years now, and until I
found this Demos directory on atari.archive, I have had no problems.
Do I have to run some sort of 50 hertz booter. If so, where do I get it from?
Please if you know, mail me.
Thanks
Eric

Cross-posted to: uva.want-ads,comp.sys.atari.st

(please respond via email, NOT by (r)espond, to
tipi@vivaldi.acc.virginia.edu)

Magnavox 8cm-515 color monitor w/ custom cable for Atari ST.

640x240, analog & ttl-rgb, & composite-video & green-screen.

Better than Atari; 13" (vs. 12), better made, useable with

IBM-comp's, Amiga, and composite-video machines (Atari 8-bit,

C=64, VCR, laserdisc player) as well.

* Includes $40 custom 8' cable for Atari ST; separate sound

jack for running sound thru stereo.

* FANTASTIC picture when used w/vcr or ld as hi-res tv; better

than any tv-set! Ideal for one needing both monitor and tv

in a small space. Can even have BOTH on and switch between!

Excellent condition.

$250 or best offer. Call (804)295-9995 or

respond to tipi@vivaldi.acc.virginia.edu

: I could use my STE in the same way as the terminal at school (although a
: little slower I suppose)?

An X-windows type connection would not be possible over a modem link.
You are given a simple VT100 terminal, from whatever software you choose
(I personally like Uniterm 2.0e. Everyone else seems to like CoNnect)

: I would definately like to have several windows, so I can for example
: "talk" with someone and if I get email, I can get into EMACS and read the
: mail without dis-connecting the person I'm "talk"ing to. Would this be
: possible at all, or can I only do "mail" OR "talk", and have to leave
: one to get to the other.

Not by modem I'm afraid. However there is one trick I can tell you about.
When you are in talk, and a mail message comes through, just press
CONTROL-Z, and the talk program will be put on hold. When you have
finished reading your mail (or whatever) you just type 'fg' at the prompt,
to continue with your talk.
There is also the UNIX program 'screen' which simulates two virtual vt100
terminals, which you flip between with a hotkey. I don't know how to use
this though.

: I would also like to read "News" and sometimes download files directly
: to my STE at home, but this isn't a problem really, as we have MS-DOS
: compatible disk drives at school, so I can just bring a disk with me when
: I'm there (so I save the phone cost downloading).

You should be able to read the news, no problem, in exactly the way you do
on the X-terminals. Kermit is probably the program you will need to use in
file transfer between the UNIX machine and your ST. In this if nothing
else, Uniterm excells itself.

: If all this is possible, what kind of software should I use, and any

That's easy - COMMS SOFTWARE - a VT100 terminal emulator. There are loads
out there, but CoNnect seems to be the current favourite for Hi-rez
systems. I use Uniterm 2.0e in Medium Rez all the time though, and I have
no complaints whatsoever.

: reccomendations for modems?

Just the faster the better. 9600 baud is probably the fastest your host machine will be able to support.

: Anybody using such a system as I'm describing? Any help would be greatly
: appreciated!

I'm using a system very similar to the one you're describing. Except I don't need to use a modem. At Bradford Uni, all the Halls of Residence have RS232 connections to the UNIX computers, so I just plug in and go.

My Viper 150 (21247) works very well under TOS, using tapebios.
I've tried Gemar, but did'nt understand the messages.
What sort of problems do you have, ie. can you get the tape to rewind, etc?

I care, it would be a shame to see PCs and Macs knock another computer manufacturer out of the market. Unfortunately, Atari seems to be back to their old marketing again. I just got back from COMDEX, and Atari was not present at all. I really don't know how they are going to improve their dealerships if they make little or no effort to attract new dealers.

Atari shows (which are becoming more rare) are not the place to attract new dealers, since most people at the show already are. Maybe there is some truth to the rumor that Atari is putting all their effort into the Jaguar at the expense of the computer market.

>
>Generally, you cannot connect an IDE drive to an ST

Wrong! Hard&Soft sell AT-bus cards as well as AT-bus/TOS (2.06) cards here in Germany. The only problem is the 1040STE case. One would need a) a desktop (cheaper) or tower case and b) a PLCC->DIL adaptor (easily available since they are also necessary for AT-Speed or Vortex ATonce and many speeder boards).
Big Hint: Don't buy an Atari drive if you don't get it really cheap. Most of them are ST506 drives (except for the Megafile 44), all of them have LOUD fans. Best buy IS an SCSI drive w/ case and adaptor, should be available ready-to-run in every civilized country (this MIGHT exclude some parts of the United States :-)).

```
To clear up some things i miswrote in my last posting:
Dungeon Master 2:Legend of Skullkeep is the correct title.
DM2 will be hopefully out by christmas for PC,soon to be followed by MAC-
and AMIGA-versions.Interplay - not Psysgnosis,who have only the rights
for DM1 + CSB - is the publisher of DM2.
If anyone knows FTL/Software Heavens' mail and/or e-mail - drop me a line
and/or post it.
Matthias

What kinds of limits are there to the number of icons in (say) NeoDesk
and Newdesk (aka GEM desktop)? What about when you have full colour
icons?

Does the 64K RSC file limit apply?

I don't think so - my deskicon.rsc file is about 160k...

Hello!

THANX to everybody who answer my previous question about Atari Laser
Printers....Many Thanx!

So,it's IMPOSSIBLE to connect this printer to another plateform :-(

As I bought it as a 'set' last month (to have a third Atari!) and
I have my DJ510...I don't have any use of this printer.

So I'try to sell it. This is a SLM 605,220-240V,50hz,include the
SLMC 804 'DMA Interface',Printer Cable.

It works (i've try it),there's just probably a service to do,'cause there's
a small black line on the paper.I suppose it's not so serious,because this
line doesn't appears always at the same place.(and sometime don't appears)
That's all,I don't want lots of money from this,because it hadn't cost me
too much.

Make offers to : paw-pp@culnet.ch

...the first will take it!

Best regards,

2295. I have Calligrapher...

Newsgroup: comp.sys.atari.st
Date: 1993-11-22 20:56:02 UTC
From: dud@stein1.u.washington.edu
Message-ID: <2cr912$qsf@news.u.washington.edu>
Source record: 197964

About six months ago, I was extremely lacking in the word processor department. I had a 4 meg TT w/120 meg HD, and all I had was an old version of First Word Plus. So I decided to go out and get Calligrapher Professional. All I can say is it's the most powerful word processor I've seen for the Atari. It's the only one that I know of that comes close to comparing to Word or Ami Pro for Windows. It worked great on my TT and I used it happily for 3 months.

Then I got a Nova 16m graphics card...

Calligrapher has major problems. It works fine in 640x400 or 640x480 monochrome, but any color mode or any higher resolution screws it up. As a result, I haven't used it much at all; it's too much of a pain to switch resolutions every time I want to word process. So I just don't word process... :(

I have the latest CodeHead version of Calligrapher; it's free of many of the bugs of the Working Title version. It doesn't rely on GDOS anymore, and is more multitasking friendly. Working Title is not supporting it anymore, but when I called John Eidsvoog a couple weeks ago, he said they were working on buying the rights for it and continuing its support.

What I'm wondering is... does anyone have a fairly powerful word processor that works flawlessly in any Nova graphic mode? I usually use 1280x1024 16 colors or 1024x768 256 colors. Would anyone like to trade your word processor for Calligrapher? Or maybe just buy it from me? It cost me $175 new... all the manuals and everything are in perfect shape. I don't know how much it would be now... any offers?

Thanks for any enlightenment, indifference, or flames...

Dan Aylward

Hi I just got a 520ST, this one's really old external power,external drive, no TOS on ROM.

So I am in need of....

Mem upgrade(would prefer to do it myself ,anyone have a DOC on file that you could UUE and send to me?)

Also I need some sort of RGB to Color Composite board(I would also like to do myself)

DSDD disk drv external(as I only have the single sided drive)

and any help anyone could offer me in setting this computer up to use the lastest ST software.

Am I crazy to try and do this ? Should I just try and get maybe an STE if so anyone have one for sale???at a reasonble price?

Please feel free to email me!!!

Thanks in advance!!!!!

I was not wrong. Obviously, anything is _possible_ with the right
leads/adaptor boards etc. It is just a damn sight more normal (and I
expect cheaper) to take the SCSI option.

This is why I included the word 'Generally'.

Please do not always be so eager to correct posters. I should think the
vast majority of people agreed with what I said.

One thing to note is that there is a 100 line limit in the NEWDESK.INF
file of the Falcon. I think it is a 75 line limit on the ST under TOS 2.
Although this does not directly limit the number of icons you can have in,
it does limit the number that can be installed usefully.

BTW the Falcon TOS version which has this limit is 4.01. I don't know if
this is the case with other TOS versions.

=======================
What a load of Rubish, Connect is far to slow, no medium Res, support,
no 80 columns with a standard text..

Note: most people here use ST/STE's with colour monitors, Connect is useless
with this type of System....

Give me STORM or Flash any day....
=======================

Connect is NOT slow. Do not blame the software for your slow computer.
Get NVDI or Warp9. It is not the fault of the applications programmer
if your screen display is slow. And there IS Medium resolution support.
Just get some Medium resolution GDOS fonts. Connect will outlive STorm
because it uses the OS calls instead of handling fonts itself (although
I believe that if you don't have GDOS, there may be one built-in). Who
knows what happens when you want to use some strange new graphics card
on a Falcon 040. And by ATARIs word, programmers are NOT supposed to
try and support TOS versions before 1.4 or resolutions under 200 lines.

Flash will never work properly under MultiTOS.

I had tons of problems with STorm when I tried it. Now, STorm may be
better for your needs, that is fine, however, to complain that Connect
doesn't offer 80 columns with "standard text" is pretty ignorant. Don't
you know that ANY type of window requires a few pixels for the border
and 80 columns using the standard font requires 640 pixels. STorm uses
its own font and Connect uses GDOS, like STalker. You can choose what
you like, but don't try and slander one piece of software to make another
look better.

I don't know the line to order Jaguars, but to call Atari, call
(408) 745-2000 That is the front desk, you can request anyone from there.

Question #3, and #5 will be answered from there!!!

Hi Chris, my wife is the Co-founder of ATARI UNITED! and has been in contact with FOG, if you are interested in them, this is the last info-press release she did concerning them.

Andreas@AEO

ATARI UNITED! PRESS RELEASE

For immediate release:

Mountain View, CA--November 21, 1993--As part of its ongoing effort to unite Atari owners with support groups and developers, ATARI UNITED! wishes to announce to North American Atari owners the existence of the Falcon Owners Group. The Falcon Owners Group was originally established in March of 1993 and is based in the United Kingdom. The Falcon Owners Group (FOG) provides support for Falcon owners through several services and discount prices for the Falcon specific shareware library which is handled by a professional outfit and accepts international and credit card orders. The Falcon Owners Group Magazine is produced four times a year and distributed with a high density cover disk. This mini-magazine is a legal page sized compilation of useful information concerning hardware and software for the Atari Falcon030. In the 27-page September issue, reviews of Ishar 2 and new Falcon shareware shared space with some extensive Q&A and an ST software compatibility chart. There are a few noticeable typos in the magazine, and little in the way of graphics, but it is rather well laid out for such a new publication. They also provide two BBS for members in the UK (Tel 0454 317047 or 0454 881095) providing Atari message bases and Falcon030 software downloads. While some of the information presented in the magazine may not be new to those who spend their free time online, FOG exists as an effective repository of Falcon specific information and is nearly a complete stand alone source for a Falcon user. Richard Davey, the Club Chairman, is actively seeking the establishment of a North American branch to the FOG, and anyone interested in founding a US or Canadian site is strongly encouraged to contact FOG and request the information needed to spread Falcon030 support to and from the UK.

The only unfortunate side to all this is that they do not have an Internet address yet and while the Membership is only 16.99 pounds for Europe, people in North America will have to pay 20.00 pounds. They accept Visa and Mastercard, or checks made payable to the 'Falcon Owners Group' and sent to:

FOG
10 Oak Drive
Portishead, Bristol, Avon
BS20 8QS

Tel: 0272 424743

Source record: 197984

I bought Calligrapher at the 92 Glendale show, and ever since I got on the Atariworks beta team (about three months later) I have not used Calligrapher. I dont know about the Nova card, as I had my TT on deployment to Japan with me and was effectively cut off the Atari scene.

I DO know that Pradip tried his best to make sure AWorks was written along the 'legal' system lines, and might very well be compatable with the Nova card... I will have to ask!

Not to tell you to spend more money, but if you could locate a STE with TOS 2.06 or even a MSTe with 2.06 you should be good to go. The cost of upgrading the 520 to STe standards might be more daunting than worthwhile.

Heck, look around for a used TT030.... they're pretty cheap nowadays.

Don't expect much from that graphical GNU Chess port (yes, it is mine).
I did it in a weekend to test my AMS library which is really intended
for action games, and so it has a really "fast" user interface, but
only ST Low rez.

Go ahead and make your own front-end - GNU Chess is written to make
that an easy task (which is why I used it).

2317. X-windows CLIENT?

Newsgroup: comp.sys.atari.st
Date: 1993-11-23 05:04:30 UTC
From: psurge@cs.utexas.edu
Message-ID: <2cs5ku$3m@yoakum.cs.utexas.edu>
Source record: 197988

THere are lots of people asking about X-windows, but I think most people are looking for the Client, not the server for their STs. I will be running all my X-windows applications on a Sparc, and I want them displayed on my ST. This is over a SLIP connection. I have seen MacX over a 14.4 slip and I know it is slow, but maybe a 28.8 will be better.

Anyway, I could care less about a X-window server for the ST, I want an X-window client.

Any suggestions? (framemaker on my ST via X-windows would be kinda neat, don't you think?)

flick
> it back into 50Hz and carried on as before.

I had this problem when I got my hard disk, apparently it was a design fault on some ICD boards, it doesn't show up on the STE AFAIK which is why it wasn't noticed.

What you can do so I've heard is add a capacitor somewhere, I don't know where sorry. If you want I know the email address of someone who might know.

This could be the same thing as you're experiencing, the fix? well I got a new DMA lead, I'm not sure what the difference is with the new lead as I only got a new one coincidently when the drive died and I sent it back to be replaced.

Then again it could be something completely different... ;-)

Not true. for 24 bot color (when available) max is 640 x 480
for 15 bit color, max is 800 x 600
for 256 colors, max is 1200 x 800
for less than 256 colors, max is 1600 x 1200.

All modes can be assigned to a virtual screen, so you can run at 1600 x 1200
x 16 colors and only show 800 x 600 on your monitor (if that is the max it
supports) and scroll to get the whole screen. I think most of the other cards
have the same capability...

wells_s@ix.wcc.govt.nz (Steve Wells) writes:

>How many recognise TT RAM? I thought it had to be specifically accessed, or
>is tht complete gunk?

Any program can use TT RAM for non-screen, non-DMA RAM. The user can
configure this by setting flags in the program header (using, for example,
the Fileinfo CPX). There are seperate flags for allowing the program
to RUN in TT-RAM and to MALLOC from TT-RAM.

This basically means that any program that doesn't do things like page
flipping will work with both the RUN and MALLOC enabled. Programs that
MALLOC screen ram will have to MALLOC from ST-RAM (unless they are smart
and use Mxalloc() to explicitly request ST-RAM for that piece of screen
RAM). I'm not sure what requires a program to be RUN in ST-RAM.

I have yet to find a program, other than low-level games, that need to
RUN or MALLOC from ST-RAM.

nb. AMS nows uses Mxalloc() when allocating screen RAM.

Data for colour icons is in the extended section of the new RSC file format,
which breaks free of the 64K limit. 64K is still a lot for mono icons - about
250 32x32 icons. You wouldn't FIT that many on the screen :)

Actually i have seen the MCA hack and it is a hack, VERY LAME. It basicly
a demo version the way i look at it. Someone would be lucky if they could
go 20 minutes with out bombing out and if you try about half of the features
you will freeze or bomb out. I wouldn't give MCA the 'credit' of the word
craked, 'hacked' or 'destroyed' would be more appropriate.

Hey Guys, I just ftp-ed LASERDEM.TOS, and this is a Falcon game,
which looks just like wolfenstein 3d. It's great, it's a pre=preview
but you can play one level. It works on both: (S)VGA and RGB.

If you like games and falcon, you better have a look at this one, the
pre-preview is freeware, but the actual game is going to be shareware.

Oh yes: I thought it was on src.doc.ic.ac.uk or else
ftp.uni-kl.de

The name you were searching for as the new marketers for FzDT is ATARI UNITED! and we ain't no commercial firm. <g> We are a not for profit group that is dedicated to providing support for Atari TOS users, with a special emphasis on those who are not 'wired' into one net or the other. The reason we have created ATARI UNITED! SoftWareHouse is to help generate some funds to carry on our outreach program. We're in the midst of working out an agreement with Aaron right now, and will make an announcement as soon as we have it in place.

Aaron mentioned re-writing the whole program in assembly, so I'm assuming that project will result in version 3.00. He's already done several modules in assembly, and will no doubt include some or all of those in v2.30.

If anyone would like more information on ATARI UNITED!, send me e-mail.

I remember the device but not much more than you. Maybe it worked via DMCs lino
interface? That wasn't a very cheap peice of kit as I remember it. It definetely
did(does?) exist though so persevere.

|> it?
Backwards maybe? :-) It's been around as long as the Falcon, I thought every Falcon owner had it. the latest versions let you save lists of settings for different programs. There is another prog that does the same thing via a bootsector but backwards is much better.

I am having trouble installing Speedo. Everything seems fine with the
installation, but Easydraw 3 (which I was told works with Speedo),
announces : Font files not found", and quits.
Any ideas?

I think you mean something else. ST Informer is a magazine isn't it? The 8bit emulator was written many years ago by Darek Mihoka(sp?). You used to be able to get a cable to connect 8bit drives to the ST. It's now PD and dead. darek no longer supports STs and works for Microsoft.

LHarc has only the disadvantage that it doesn't work with
MinixFS. This makes it unusable.

Only DMA from ACSI must go to ST-RAM. The other DMA chips (SCSI, SCC,
(DMA sound?)) can handle 32 bit addresses, and thus can directly
access TT-RAM.

Hello,

I want to refer to a GDOS driver FAQ I just posted. It can help you
if you can read the following text:

It is currently translated by Stefan Damerau.

++

Hallo,

ich habe gerade das GDOS-Treiber FAQ in de.comp.sys.st und maus.gui.gem
gepostet.
In dieser Gruppe kommt nur dieser Hinweis um Bandbreite zu sparen.

de.comp.sys.st: ein File als TeX-Version und eines als ascii-Version
maus.gui.gem : ascii-Version, wegen der 16K-Grenze gesplittet

Aus dem Inhalt:
- alle mir bekannten Drucker- und Bildschirmtreiber mit Bezugsquellen
- alle mir bekannten Programme, die ueber GDOS ausdrucken
- Hilfsprogramme zum Arbeiten mit GDOS
- Tips und Tricks
- Adressen, bei denen man die genannten Produkte bekommt
- kommentiertes Literaturverzeichnis
- und vieles mehr

Viel Vergnuegen damit.

MfG,
Gerd

It probably is X windows that you are using.

>It is possible to connect via modem to the university, and I was wondering if
>I could use my STE in the same way as the terminal at school (although a little
>slower I suppose)?

Yes, and no. Yes, in that you are able to have many windows on screen at once
(upto 7 on the ST), but they are TEXT-only windows, and not graphic windows as
X-Windows.

The program that you are looking at is Unix Windows, which is available fro a.a
in the Telecomms directory...me thinks.

I posted a question similar to yours quite a few weeks ago, regarding Unix
Windows however, and got lots of replies concerning it. If you do use the
program, use it with a fast modem, as it is supposed to be very slow.

You will not be able to display any graphics, and you will also not be able to
open any windows using the 'xterm &' command, or be able to display anything
that appears on your X-Window display (clock, xload, mail box, etc). All you
will be able to do is have different jobs going on in different windows. ie,
read mail in one window, compile in another, maybe talk to someone in the
third.

But, I wonder how slow this will be, as you are only using one modem line, and
the ST does not have sockets like a X Terminal does.

>By the way, is there a user manual for "connect"? I don't seem to remember any "readme"
type
>user manual with it. By registering, will I get a printed ENGLISH user manual?

I think that the English Manual has been prepared.

Hope this helps.

Danny.

One thing to note is that there is a 100 line limit in the NEWDESK.INF
file of the Falcon. I think it is a 75 line limit on the ST under TOS 2.
Although this does not directly limit the number of icons you can have in,
it does limit the number that can be installed usefully.

I believe the limit is 4096 bytes rather than 100 lines, as this is the amount
of space reserved for it by the OS.

I have STraight Fax v.2.0 and it's great. It converts Pagestream and
other file types into fax files, and is very easy to set up and use.
Once set up, you needn't worry about what directories things are
in--STraight Fax blends into your system seamlessly.

I use it to transfer drafts of our band's newsletter, press releases,
etc. to my manager for editing/approval. I bought from Toad Computers,
and they have excellent online support from the author, as well as some
nice support files. Toad is at (410)544-6943 or 800-448-TOAD (orders only).

> I would most certainly hope Atari could help you to solve this problem.
> You have a defective Falcon. It is not a common problem.
It IS a common problem. I posted also a solution to it, but I don't have that
post anymore.
Here it is in short, without screwing too much:
Open the cover (6 screws)
Remove the loudspeaker
Look into the hole, you will see one of the screws holding the harddisk to the motherboard.
Loosen this screw a bit, its fittet too tight so it produces shortcuts on the
other side of the motherboard (no right channel, no monitor sound)
Close your Falcon, it should work now.
If it still does not work, grab the monitor-adaptor and pull it up while
holding the F030 down. This should remove the shortcut below the motherboard.
If it still does not work, send the Falcon back to Atari.

This harddisk unscrewing solves also the problem of not being able to access
the HD if it's too hot (30 degrees C roomtemperature). When it's hot the HD
expands and the screws hold it in place and so it bends and the heads find the
tracks nomore.

Georges.
PS: Now I'll save this post to repost it when the question arises again.

2350. A bug in NewDesk under TOS 4.04 on Falcon?

Newsgroup: comp.sys.atari.st
Date: 1993-11-23 13:45:46 UTC
From: imr@cs.bham.ac.uk
Message-ID: <1993Nov23.134546@cs.bham.ac.uk>
Source record: 197917
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I've had my Falcon for a few months now but I'm still suffereing from a really annoying little bug in NewDesk...
This is the problem: I set all my keyboard shortcuts up how I like em, save the NEWDESK.INF file. No prob... I now run another program (any program) and when I come back all the keyboard shortcuts are screwed up. From saving the desktop again I've sussed that another copy of the NEWDESK.INF line dealing with keys gets appended to the existing one... this really is annoying since quite often I'll have been running a program and then I'll say add another installed application, if I then saved the desktop I'd get garbled keys in the NEWDESK.INF file and would then have to attack it with an editor...

So does anyone else suffer from this ? Is there a cure, should I get in contact with Atari about it ?

Cheers

Ian

(my system is Falcon 4/120 with TOS4.04, nVDI and screenblaster)

>>

>This has always puzzled me - why has Atari never written a PostScript
>driver? Not for *any* version of GDOS!

Because they have never been interested in promoting their computers for serious/pro use.

I do have two things that call themselves GDOS PostScript drivers. The first came with Calligrapher v2. That program uses GDOS in *very* strange ways, and none of their drivers would work with anything else. They abandoned GDOS (actually a clone, called G+Plus) for v3. (And now they've abandoned Calligrapher period. The PostScript driver for Calligrapher v2 produced the worst PostScript of any program I have seen on any platform. Absolute bollocks, especially if you want to use any font other than those built in to the printer. (It would draw the outline of every character individually, therefore making *enormous* PostScript files, which printed very slowly because they did not use the character bitmap cache.

The other GDOS/PS driver came with Timeworks Publisher 2. I haven't tried it with other GDOS programs, but it was quite specific to the way Timeworks had hard-coded info about PostScript fonts, so is unlikely to be useful elsewhere.

The vector system of SpeedoGDOS makes PostScript more useable, and more useful. If we can get a driver.

>I have heard about a German company having a Case for the Falcon, but that was
>a few months ago...nothing else.

Atari ST Nieuws (netherlands) has a review of the Mega Falcon case as
they call it. Cost is about $150 and that includes PC keyboard, adapter
for the keyboard (to which also joysticks and mouse can be connected)
(by the way casing will also work with 1040 st(E)) Lights for power,
disk activity and key to lock the mouse and keyboard both (with real
key, not one fits them all) and a power switch on the front. Also
included are hardware diskdrive write protection. And that is about it.
Building the entire thing might be a bit difficult they say.

Erlend.

Yup, I have the same problem (I think I am running 4.01 though I never have really checked properly).

I have a F030 4/65...

>Where didya get a 14.4 for $99???

Mac Warehouse (but be vewy vewy quiet, don't tell ol' Sinclair that
I am using a "Mac" modem ;-)

It's called a "Linelink 144e" I believe...

As far as it being a "Mac" modem, it has a 25pin RS232 port (and a cable
to hook that to a Mac - I just used a normal RS232 to hook it up to
my ST); and one or two AT settings had to be changed (like making
the carrier detect actually know that there's a carrier instead of assuming
so, i.e. AT&C1), but so far it's been working rather well...

Also, Toad's "Modem tester" says it's a Class 2 fax as well. One
thing that seemed a little confusing at first is that the box said
it was "Fax upgradable" *VIA SOFTWARE* - this tells me that it has
the capable hardware already (the "modem tester" says it's Straight Fax
compatible so I'll wait till I buy a copy of Straight Fax to test
that out). Since I'm *not* a fax expert, don't take this
as gospel, however...

In any case, I did *not* order the Mac fax software because I'm not
planning on faxing from under Spectre. But I did get a Mac terminal
program on disk :-)

Rob

...and to make things more interesting, I heard about this Mac modem
from an Amiga user on an Atari BBS who said he saw it in an Amiga
magazine :-O

2355. New PC owner :(

Hello, I thought I'd pop over here and post a message about my trials and tribulations having bought a new PC 486/33 with windows to replace my MegaST. To all Atari people who might be considering buying a PC and running windows don't plan on doing high speed (19.2K) telecomunications. I've spent the last several weeks trying to get error free comunications without luck. I've use several of the mainstream telecom packages and they all fail. I'm also a Genie user and the PC Aladdin program is a POOR reflection of the ST Aladdin application. AOL and WINCIS are also poor systems compared to ST Aladdin. I've just ordered a piece of software called turbocom which is supposed to fix all my problems. Yeh like the 16550 uart was going to fix all my problems. So Consider when and if you decide to move to a windows PC, Telecom on the ST is best!

Unfortunately, In the areas of business apps, and games the PC is probably better. Having spent $3K for my multimedia PC I can't help but wonder if I wouldn't have been better off with a Falcon...

Best Wishes,
John

>Anyway, I could care less about a X-window server for the ST, I want an
>X-window client.

Excuse me, but what you are looking for is an X server, not a
client. To explain a little: In the X windows architecture, the
sytem which provides the graphics display functionality, i.e.
which accepts command messages and displays graphics accordingly,
is the server. Obviously, this is what you look for. The source
that generates the command messages is the client. In your setup,
this would be some program on the Sparc, e.g. Xterm or
FrameMaker.
This can be a bit confusing sometimes, especially if you're used
to assume that the "big" computer always is the server and the
"little", local one is the client.

I got rid of my BJ10e due to compatability problems - Epson LQ emulation
will cover you for just about everything, but only BJ10e mode makes
the most of the printer. Hence I found myself twiddling with dip
switches far too often and went for a Deskjet instead.

>
>Anyway, I could care less about a X-window server for the ST, I want an
>X-window client.

NO, you want the server. The client (in your case) is the Sparc and
the ST is the server. The simplest way to figure out what is the
client and what is the server is the following:

- The machine you start the program on is the client (machine).
- The display machine is the server (machine).

MacX is a server implementation. If I was able to compile a
X application on the Mac and run it from the Mac, then you
have a client implementation of X. However, one can not
compile X code on a Mac (at least to my knowledge).

Implementing a server on a machine is easier than giving a
machine the ability to run X clients. In order to to run
X clients, one needs to port X-Lib (and subsequently the
Xt Toolkit). A server just needs to implement the underlining
X protocol.

Hello!

Who knows a program called MolSys? It's used for building and displaying
threedimensional molecules. It was written by an english author.

In his description he told something about a new version which will
support "real" window output, colours and compatibility to MTos.

Who could give me some information about this project?

Greetings,
Christian

QuickBBS ST V1.10 runs under MiNT in a TOSWIN (or whatever) window, too -
if you switch off the statusline. (The statusline is written to the screen
using LineA.)

(I think that's rather astonishing for a GFA Basic program in the size of
QuickBBS...)
It's not PD, though, but keyware.

>or were they just on a prototype and then scrapped?

System Audio Manager has been included into the Falcon package about two
months ago (for Germany, that is).

A sync input has ever been there (hint hint: on the monitor connector).

The only thing missing is a video input. That's what Genlock interfaces
are good for.

Not quite right.

The Crazy Dots II VME card has a 84 MHz maximum pixel clock.
Only the old Mega ST version was limited to 65 MHz.

There's only one version of the Mega Vision 300 card. They just charge an
extra DM 200,- for the TrueColor driver software :-(

You surely don't think that anyone at Atari UK understands the
complexities of the Falcon? {grin}

: >(my system is Falcon 4/120 with TOS4.04, nVDI and screenblaster)

Stephen Payne (pagan@meiko.co.uk) wrote:

: Yup, I have the same problem (I think I am running 4.01 though I never
: have really checked properly).

All I have to say is that I know a UK Falcon, TOS 4.01, 4/65, where the
problem just simply does not happen. And I know that it is put through the
most rigorous of exercises, as far as the NEWDESK.INF file is concerned!
It does not btw have Screenblaster or NVDI - could one of these be the
problem???

There are two possible reasons:

1. You have edited the NEWDESK.INF file with a text editor.

2. You have exceeded the 4096 bytes limit on the file.

If it's 2 try GEMRAM+SHBUF. WinX is also recommended.

I had something like that after I upgraded my 1040ST to 2.5M; the bozo
that did it used a Z*Ram upgrade board plugged into the video shifter
socket. I had to fiddle with the shifter and the RAM chips on the board
(they were all socketed, so I made sure to push them in as hard as I
could).

Another possibility is that your ROM chips are loose and/or the
connections are corroded; this /is/ the 2.5" sickness, BUT the "Atari
Drop" has never worked for my computer. I have to open it up, take the
power supply out, and push down all of my ROM chips. Inconvenient, but
it brought it back to life... I haven't had to do this for a couple of
years now. (Fingers crossed, and hoping for a lottery win so I can buy
a TT ahead of schedule!)

Please, please, PLEASE don't perpetuate this media silliness...

All together now:

hacker != cracker

I am proud to say I'm a hacker; I "grew up" on a VAX PDP 11/34 running
the RSTS-E timesharing system. I had to use punch-cards to get a
printout.

I'm also proud to say I'm not a cracker; I can't think of a single more
useless way to spend your time.

Now, a cracker might want to be a hacker, but a hacker is never a
cracker.

>
> Obviously you haven't seen RATSoft ...

Obviously, I know at least three people locally running RATsoft BBSs;
they bought the software because I recommended it after reading the
author's spec list on GEnie.

> It's NOT a .TTP program.
>
> It does NOT assume it's got the whole machine to itself.

It's a text-mode program that draws lines on the screen. If it was a
TTP program, it'd run quite fine in a TOSWIN window under MiNT.

> Why are you lying?

I'm not lying; you're ignoring facts. Typical of flame wars in this
newsgroup!

> RATSoft will support MTOS when the OFFICIAL MTOS is fast enough. (MTOS v1.04
> isn't, v1.08 might be, but v1.08 is NOT official!)

Why not support it now and let the users decide if it's fast enough? I
haven't found anything that doesn't respond to a higher priority by
running faster...

>PowerPC)?

actually, maybe. Atari has said that they will continue to support their computer line, and that income from the Jaguar will go to those areas as well as Jaguar-related concerns. In fact, (or rather in widely accepted rumor) the plans for the Falcon 040 are complete, and mostly what is lacking is simply the funds and name-recognition (read:ADVERTISING MONEY) necessary to produce & market.

I'd like to see GFA-Draft render an Adobe Type-1 font.

A drafting program isn't in the same league as a desktop publishing
program. The fact that PageStream _is_ incredibly slow, and people
_still_use_it_ ought to say something about the software...

Uh, oh, I guess Windoze has the same "feature". :-(

Change "return;" to "return 0;", or just delete it. Unless you
(incorrectly) define main() as:

void main( void )

return needs a value.

Does anyone know where I can find an implementation of pgp for the Atari ST? I've been told there is one, but can't find it on any of the big archive sites... Please respond via email. Thanks!

> popular Windows operating software. [WSJ]

Oh, give me a fuckin' break. Because Apple decides to release a "PC clone"
(which, btw, is exaggerated; if you bothered to read the entire article,
without skipping over any words, you'd know the truth), that means that
they "aren't doing as well as some would lead us to believe"?!?

Praytell, Mr. Atari-With-Its-Miniscule-Marketshare User, were you also
berating Atari when it announced its PC clone? Get a clue.

-Steve

PS: And before you start bashing me, note that I am both a Mac and an
Atari user - with the Mac getting preference. I refused to take an
assertive position for a company as demonstratably assinine about its
business practices as Atari.

Hallo,

ich suche eine Moeglichkeit, Campus Cad Files vom Atari ST auf irgendeine Weise auf einen PC zu bekommen. Ich dachte daran, den Campus Cad File nach hpgl zu konvertieren oder zu einem anderen Standartformat. Vielleich gibt es das Campus Cad auch als MS-DOS Version. Hat jemand eine Idee ?

Bye bye

Tilo

|>
|> If it's 2 try GEMRAM+SHBUF. WinX is also recommended.
|>
|> Ofir ogal@cix.compulink.co.uk

Well it's not the first cos I only set to it with an editor _after_ it had
started doing weird things...
I also don't think it's as big as 4096 bytes, infact I'm sure it's not that
either since it's being doing this from practically 'out of the box', ie ever
since I added my own keyboard shortcuts...

Still I'm learning to live with it

>Switzerland * *
>**

There is only one PATH variable in the ASSIGN.SYS file. Speedo sets it
to the directory which you selected. If your other gdos stuff is in
another directory (with PATH formerly pointing to), gdos will not find
it now. Also keep in mind that the Speedo installation overwrites an
existing ASSIGN.SYS file. You have to merge your own ASSIGN.SYS.

Mike

BTW: Is Migraph still alive and kicking? I would like to upgrade my Easydraw.

Source record: 197867

Hi Musicians
Hello musicians

I just uploaded V1.2 of "deluxe MJUZAKK", the musiceditor for Falcon, to "ftp.uni-erlangen.de".

The heavy bug in the sampleeditor of V1.1 is fixed. There is an english docu and lots of little advantages in the sample- and songeditor.
As always, there are 6 tracks whose CD quality samples can be mixed and transposed in real time (or i.e. ca. 8 tracks in UKW-quality). Over 40 samples of whatever lenght can be used in one song.

you can find also a good song (LONGJON.ZIP) there.

Have fun

bern

Falcons bring excitement back into the computer world - reminds me of the 800 days. Just do it - you won't be sorry.

>I got a super-brief demo of D2D the last time I stopped by the dealer.
... some deleted for brevity ...

> 1. How much disk space is used per minute of stereo audio? Can
> you select lower sampling rates to increase storage time?

answer Q1b - yes. Q1a: 50kHz 192K/sec (or 11.25 Mb/min)
44kHz ~168K/sec - not available as selection in
freebie that comes with falcon
33kHz 132K/sec
25kHz 96K/sec
20kHz 81K/sec
16kHz 64K/sec - equivalent to telephone
12kHz 48K/sec
10kHz 38K/sec
8kHz 32K/sec

> 2. Is anyone using this with a drive other than the stock 65 or 80 meg
> units? Either external or internal.

I filled a 16M partition in just over a minute on the stock drive. (Do be careful as Tos <4.04 has bug that can be disastrous in this instance). I haven't tried it with a 44M SCSI removable from a Mac but they have come down so far in price, that may be the way to go.

> 3. Is anyone using this only with the internal drive? How much
> space do you have for storing recordings?

From answer above, you can see not enough - but I program and need the HD for other things.

> 5. Is the "cut and paste" splicing feature really usable for a
> master (i.e. click-free)?

Its usable but finding the places to cut are tricky with the freebie version. I assume you are talking their commercial version. On the freebie one, I didn't notice any clicks in the 50kHz stereo sample I took from a CD player and then exchanged the male and female voices

of a couple of passages at a club demo last month. Now do that with someone's spoken words. Dick and Ronnie would call it heavenly. You just can't trust what you hear anymore

> 6. How usable are the built-in effect algorithms? They appeared
> to have no user controllable parameters, is this true?

It could be my age, or maybe the small speakers we were playing this through - but only a couple of the effects had any real noticeable difference (like flanger.) They do give you user adjustable settings (just to the left in the D2D effects window) for all the effects. Only one effect can be used at a time.

> 7. Any "gotchas" you have encountered? Crashing problems?

All my experience has been with the freebie model. Have no idea what the commercial one would be like - but I suspect better (it at least gives you a visual wave pattern of the recorded sound which would be useful in cutting/pasting.)

Source record: 197891

I am posting this for a friend, so all E-mail replies should be directed
to pabooth@bradford.ac.uk.

I am looking to buy a second hand ST compatible Hard Drive, of about 40 -
80 meg. I would prefer to buy it from someone in the UK, but other offers
are not ruled out. Also, an expandable hard drive would be desirable, (ie.
based around SCSI host adaptor).

To give you an idea, a new 65 meg hard drive can now be bought for about
330 UKP brand new. I am looking at about 140 Pounds for a 40 meg, and 190
pounds for a 80(ish) meg.

I have seen no slowdown as of yet in Cybermorph, with lots of mountains, lots of enemies, and a million polygon missiles aiming for my butt.

>What games are actually available to buy?

Only the pack-in, Cybermorph, was available at the Electronics Boutique when I picked my Jaguar up. But I'm going to try and track down Raiden and Crescent Galaxy, which should be out also. Dino Dudes should also be available, but I'm not dying to find that one...

Why bothering with the PPC604 when there will be a PPC620 with four times the speed ?
Well ATARI, never take the best processor, they always take those who are priced at $50 (this is a maximum!!!).
Or just look at the PC-add ons for Falcon: Who cares about an 286 you add to your 68030SX??? People are talking about 486DX2 at the moment and even then should it be possible to create an add-on card with an AMD 386-40MHz or a Cyrix Chip, which have fallen down to prices around 80$ (purchase price!!! here in Switzerland you'll get a complete ISA-Board with 386-40 for 200$!!!!)
Look at Apple, they don't start with a small 286 (don't talk about those NEC V30 or V20 in the first AT-Speeds....) they just stick a 486 into their Houdini's!!!
That's what I call consequence!!!!

Have a nice day tough

In response to above post, and other similar posts on the same subject by by
Mr. Mickey Boyd:

Mickey,

In all the years I've been using internet I've never come across a post
which angered me quite so much as yours. This is especially significant since
you post has absolutely nothing to do with me! I have never seen such a rude,
derogatory, unnecessarily insulting post. Your behavior is worse than that of
any novice user I've run across. I have not read, nor do I care to comment on
whatever the original post was; it is obvious that Mr. Smith regrets what he
said or the way in which he said it. Your own personal conduct in this manner
has been immature, angering, and completely over-reactionary. Hopefully a few
other System Administrators will see your post as well and let you know their
feelings on the matter. If you would care to mail me the address of Mr. Smith's
System Administrator, I will mail him my views of your own conduct as well, so
that he may better disregard your other messages to him...

Sincerely,

Mr. David H. Butler

Given a fast modem, and the right software, sure, why not?
I haven't done it with an ST, but I have run X over a V.32bis modem,
and it's useable. It's far more useable, though, to keep as much as
possible local.

>: I would definately like to have several windows, so I can for example
>: "talk" with someone and if I get email, I can get into EMACS and read the

>
>Not by modem I'm afraid. However there is one trick I can tell you about.

Does anyone out there still use UW? It's a simple multiplexing
protocol that runs under BSD-based UNIX networking, and give you
up to 7 windows. I'm within 1/4 mile of the two guys who did the
ST port of UW (it was originally done for the Mac), but neither one
has used an ST for years... I have used UW over a 2400 bps modem
connection, and had no problems. You notice when other windows have
active traffic, but the main advantage is that you can maintain multiple
contexts and switch between.

>When you are in talk, and a mail message comes through, just press
>CONTROL-Z, and the talk program will be put on hold. When you have
>finished reading your mail (or whatever) you just type 'fg' at the prompt,
>to continue with your talk.

Works if you're using ksh or csh variants, not with the basic Bourne shell.
The big problem with that approach is trying to remember what is where,
and switch back and forth.

>: I would also like to read "News" and sometimes download files directly
...
>on the X-terminals. Kermit is probably the program you will need to use in

>file transfer between the UNIX machine and your ST. In this if nothing

UW has (or had) kermit built in, though the last version I used
wasn't as robust as commercial software. Still, it's nice to do
do a download from one window, and (slowly :') continue working in another.

A quick browse using gopher reveals at least one site that still has
uw available...

In poking around looking for this, I noticed that someone has ported
the mgr windowing system to the ST as well, under MiNT; I don't know if
it's intended to work across a network, though.

2423. WANTED: A new version of GnuChess

Newsgroup: comp.sys.atari.st
Date: 1993-11-24 19:39:49 UTC
From: peterc@a2
Message-ID: <1993Nov24.193949.19462@nessie.mcc.ac.uk>
Source record: 197894

(Seeing as I posted this on Sunday and have not received any reply,
I am reposting this, assuming it failed to be distributed to the outside
world - apologies if it was actually sent out.)

Hello all,

I just downloaded the chess programs available from umich archive
and of the three there only Gnu Chess seems worhty of running on my
520 STFM, Krabat seems too small to be possibly any good and Warwick
Allison's graphical version needs a 1M machine.

The problem is this Gnu Chess dates from 1988, i.e. it's ancient.
Has everyone out there compiled a newer version of G C (I believe the
latest is 4.0.62) to run on a half-meg machine with a 720K drive?
If so, could they contact me by email because I want the binaries and
stuff - I think compiling it myself would be impossible given
my restrictive setup.

(I don't think I need a running version with the entire opening book
which is enormous.)

Peter Chang - peterc@v2.ph.man.ac.uk

Well, I must admit that in retrospect, I agree with you. I should have separated my professional and emotional responses to Mr. Smith, and shall do so in the future. I like flame wars as much as the next guy, and I feel that I had a professional obligation to comment about the piracy thing, but mixing these two methods of communication in a public forum was unbecoming and unprofessional. In doing so, I really came across as a maniacal net wacko, which I would like to think is not the case. In fact, I am more into "low impact" system administration (though I realize it would be difficult to tell this from those posts). With hindsight, I realize that I should have either commented politely and professionally, or flamed-on in "user mode" and left my sysadmin hat on the rack. Alternately, I could have done one in private email and the other via posts. Either way, my chosen method was not a good one.

In one of my posts, I mention my having deleted accounts for "such infractions". I received a couple of emails about this, as I was less than precise in my description. I have deleted accounts for repeated acts similar to that of Mr. Smith, coupled with a refusal to admit responsibility. Neither of those is the case here. Account deletion due to ignorance would not be appropriate, and I did not mean to imply otherwise. I made the comment before Mr. Smith admitted his mistake.

So, I think both Mr. Smith and myself learned a bit about net conduct. In one of my posts, a particular flame read to the effect of "you type faster than you think". It is apparent that I am not free of this particular fault myself at times. Mr. Smith admitted that he made a mistake, and it is only fair that I do the same. I made a mistake, which will not be repeated in the future.

As for comments from others, the emails I have received on the subject (most from sysadmins of various types) were roughly equally split between "atta boy"

and "your behavior sucked". I think some folks focused on what I did, others on how I did it. As I say above, I think the former was justified, but the latter flawed.

As for Mr. Smith's sysadmin address, I'll email it to you.

SHBUF is a program that patches the AES. You can have an 8k buffer by renaming itr to SHBUF8.PRG. The program requires that GEM is in RAM, so you must use GEMRAM or ROMRAM before it.

>If it is a PD/Shareware program (ie not copyright) then a UUE'd version

Let me know if you can't find it. SHBUF, GEMRAM and Winx are on the cover disk of the next ST Review.

I am always amazed that musicians and/or composures of all people would consider stealing someone else's work to be appropriate behavior. Just imagine you have finally put together the perfect piece. Wrote it, recorded it, it sounds great! Everyone loves it. Everyone HAS IT. But, wait, the recording people say they've only sold a very few copies. How is it that it is so popular? That everyone seems to be listening to it? That everyone seems to have their own copy? Why, they pirated it from you! Isn't that neat? Doesn't it make you feel good about all the work you did?... all the year's of effort gaining your skills, perfecting your technique?... getting to where you could produce something everyone could love? Doesn't it just really make you want to do it all over again for nothing?

Can't we who make music and use computers see that the people who made the software are a lot like us? They study, work, grow, try and try again until they finally get it right? Don't they deserve the fruits of their labor just as much as we do? Of course! If you like it, if you use it, BUY IT!

ST_SLOTS??? Man, now that _is_ going back a few years!!! :)

That game was written in the original GFA BASIC 1.0. The only way to load it
into a later version of GFA would be to merge the source as a LST (text) file
but alas (and thank heavens!), that file was not saved.

>Is GFAbasro freely distributable?

Yep, GFA doesn't care if GFABASRO is distributed. For that matter, the full
GFA BASIC 2.0 interpreter may be freely distributed (but not the compiler).

Yes, if you use AHDI wich have som strange way to look if you have a SCSI device connected to your computer:

AHDI first check ID 0... IF there isn't anything there... AHDI skips the following ID's. So, if using AHDI, you must set SCSI ID to 0 for the first device, ID 1 for the second and so on??? :^(

ICD's software have a better way to make a fast boot, you can "turn off" the ID's you dont use!!! :^D

>
>Also, you could try reformatting your media using one of the official

Geez this sort of thing annoys me. Haven't Atari-house programmers heard
of Malloc yet?

Not only does a limit like this prevent you from having large NEWDESK.INF
files, but it also mean that anyone with a *small* NEWDESK.INF file still
loses 4K, even if the file is 100 bytes.

Arbitrary limits are an indication of programming weakness. The "40 folder
limit". The "7 windows limit". The "6 ACC's limit". Anyone would think
they are laws of nature rather than flaws of programming.

If the proper flags are set in the binary's header, it'll run and
malloc() from TT RAM; I'd like to hope that the OS would translate
Malloc() calls into Mxalloc() calls to get at TT RAM if the flags are
set properly.

2440. Re: Any Speedo-Fonts in the Public Domain???

Newsgroup: comp.sys.atari.st
Date: 1993-11-25 00:31:47 UTC
From: warwick@cs.uq.oz.au
Message-ID: <16499@uqcspe.cs.uq.oz.au>
Source record: 197809

Is it possible for a user to produce Speedo-compatible fonts?

If so, the GNU Font Utilities could lend a hand to this process.

What about conversion from other formats? I have an excellent
"Old English" PageStream font that I spent 30 hours creating.

SpeedoGDOS font editor maybe? (Sound like fun...)

Anyone have specs on the format?

I had a similar problem on my TT. I never fully diagnosed it though - I just
went back to a bare NEWDESK.INF and hacked at it again. The problem seems
to arrise when you start fiddling with your own additions (I was adding
a handler for "*"-type files).

One thing to be careful of: make sure you have CR-LF's at the end of
lines, not just LF's.

> I'd also be interested in this

Someone in email suggested (thanks!) that something like DA's Vektor
attached to a Roland plotter would be a good system for this sort of
thing; apparently some of the Roland plotters can use knives instead of
pens when plotting, so they can cut out pieces of vinyl or whatever.

Now I just have to squeeze the North American price out of Yat and find
a Canadian company that still sells Atari hardware...

There's one on atari.archive.umich.edu:/atari/Telecomm; the filename is
u<something>. :)

I'm going to try to get Hermes to work with Taylor UUCP's uucico in a
couple of days (time is short right now!)... that should make it work
infinitely better with MiNT (the current uucico causes SEVER problems
under MiNT; I really wish people would stop using GFA-BASIC for
important software).

You should use a decent editor that doesn't care about the end-of-line
character; real io libraries don't care if it's a lf (UN*X), cr-lf (DOS,
OS/2, Atari), or cr (Mac)... Try MicroEMACS, or Mutt, or (probably)
JOVE, or even GNU EMACS (if you're feeling like you've got lots of RAM).

Hi All

Some of you may know that there is a new mag being started up for the ST
and Falcon PD scene, involving some members of this network. We're aiming
to cover PD and Shareware releases, articles and reviews for both the ST
and the Falcon. One of the planned features of the mag will be a list of ST

and Falcon PD Authors, so that readers can look up your name and find out
where to contact you and check what other software you've written. So I'm
appealing to all authors to send me details of themselves along with the
programs they've written, no matter how small, to be included in the list.

If poss try and include the following information:

Name:
Postal Address:
Email Address:
Titles written: (Name, type of prog (ie Adventure Game, Comms Utility),
whether it's Pd, Shareware, Postcardware or equivalent,
and shareware fee if applicable. You could also include
a short description but this will only be inserted if
there's space.)

We'll let you know when the mag comes out, so you can see reviews of your

work <grin> but for now the release date of the first issue is around the

New Year.

Oh If poss please reply via netmail, if netmail is dodgy or you can't then

just reply here.

Thanks and hope to hear from you!

Speaking of which, if there are going to be icons floating around, and
I don't have neodesk, how do I install them for either TOS3.06 or for
MTOS? Is there a (relatively) elegant way?

BTW, if my brains havent been leaking out too badly, I think I recall
someone saying that both TOS and MTOS (so far) have a limit of 256 icons (I
assume this is related to the 64k limit on the .rsc file). Is anyone doing
anything to

a) remove such "silly" limitations (I put silly in quotes because it is not
immediately obvious why these limitations still exist, although I'm sure there
used to be a good reason)?

b) make importing of icons an easy, if not intuitive, process?

When I say anyone, I mean both share/free/PD ware as well as
commercial and Atari development...

I am interested in buying a colour printer for Calamus SL. I could
have a budget of up to US$3000.
Any experiences/suggestions?

This is not the only problem. Make sure that you don't delete trailing
spaces. Severeal editors do this <automaticly> for you!
Missing trailing spaces can result in the effects described above!

Hi Stefan,

Just FYI (For your info), what you call "Nachleuchtzeit" is called
"Persistance" on this side of the pond. BTW, I recall hearing that TVs have
better persistance than most monitors. Is this true? If so, why? I should
think that since TVs have a lower vertical resolution despite being interlaced,
that they would have equal persistance since each pixel is being illuminated at
the same frequency as for a normal screen on the monitor (60/50 Hz)....

2467. go5060hz programs...

Newsgroup: comp.sys.atari.st
Date: 1993-11-25 09:29:26 UTC
From: clangenh@cs.uct.ac.za
Message-ID: <CH1Jp3.5C0@cs.uct.ac.za>
Source record: 197834

Hiya everybody..
Before I go any further, I must ask: PLEASE do NOT reply to this posting, I am using a friends account to post this, and I am not about to read his mail to see if anybody replied to this. Follow ups are no problem however.

Right, now that's out of the way, I must state my reasons for writing the go5060hz programs again:

I wrote the programs to enable autobooting programs which work in a different frequency than the one your machine is set to, to be able to autoboot and run properly. I wrote the programs for the ATARI ST ONLY!
And if anybody has a look at the source code, they will see that the code is fairly machine dependent, requiring the frequency setting part of the TOS to start at location $FC0084.

I did NOT write the programs for the Falcon! Hey, I don't even have access to a Falcon!!! Then again, if anybody is willing to temporarily give me one, I'll gladly convert the programs to work on Falcon as well...

And for those who are interested: Yes, I am from Namibia, no I do not have internet access from Namibia, I'm in Cape Town at the moment, but I'm leaving for my holiday Monday morning already. So I won't have net access for around 2 months. You want to write to me then??? My address is in the documents explaining how to use go5060hz...

Said programs can be found at atari.archive.umich.edu and the progs you are looking for are go5060hz.lzh
in Newitems as far as I know, I haven't a clue where it will move to once it moves out of there...

Enough of this rambling and bandwidth wasting rubbish...
Happy holidays everyone.
I'm outta here

Barry McDuling

A Second Hand Mono Monitor could be gotten very cheaply (prolly around 50 U$D)
however there are VGA Connectors i.e. Adaptors that basically let you use your
Atari in all modes including ST High. They run a little higher though, in the
UK I think you might have to spend as much as 150 Pounds or more...

GIF is obviously only an 8 bit Format, however there is a big difference
between Falcon "True Color" and 24bit real truecolor *grin*

It is good for most things i.e. viewing Gif's and Jpeg's but for really nice
rendered TIF's or TGA's 24bit makes a difference, once you use it, you don't
really want to leave it :)

Thanks for the list Stephan! :) Let me correct a little something there ;)

The NOVA VME 32K is not produced anymore, and the VME 16M now takes it's place and the NOVA VME Plus 16M is now available for 999 DM I think? and is a faster Board

THe prices for the VME 16M have dropped, for Lexicor Users they cost 489,- U$D + Shipping and the max. rez is dependent on really your Monitor. It can infact go upto 1600x1200 in resolution, however in the brochure it's max. rez in 256 (8 Bit) Colors it is infact 1088x832.

Yat@Lexicor
Happy NOVA User :)

ps: NOVA VDI update is upto 2.05 now

Yes there is a True Color Driver for the Crazy Dot's by NVDI, I think if you
don't have it you will have to purchase it Extra from TKR as it is a special
True Color Version for CRDOT's I believe.

99 DM? more maybe?
```

If you mean just the recent Future Show then he almost definately was at our
Stand (Lexicor/16/32 Systems).

We had the only Atari Proper Display with Two Falcons and Two TT030's. One of
the Falcons was given a PC like casing, but wasn't infact a proper case
design, just a Cover for the Computer and Monitor.

He might have gotten confused with the TT's that were there?

Another thing to care of: there must be exactly 128 bytes in the first
four lines (#a to #d) including CR-LF. These lines were once used by
the old control.acc. The desktop writes from offset 128 to the file,
but parses it from the beginning; thus the problems start just when
you save it from the desktop after you have mangled it.

>Anyone have specs on the format?
>

The format is encrypted, and the only way to decrypt them is to use
Speedo itself, or another program that has licensed ($$$ of your
favourite currency) the encryption keys.

So my guess is, no there won't be a font editor, although I'd really
love to be proven wrong.

The Speedo fonts in the X11r5 distribution are not encrypted the same,
so the fonts and the Speedo code in X is useless to us. WordPerfect 6
uses the same encrpytion as Atari, so we can use the WordPerfect 6
Speedo fonts (I bought a pack of WP fonts and they work fine).

The font *header* format is available (but of debatable value
considering the previous comments) and is published in the Compendium
and also HiSoft's Modern Atari System Software (whatever the name is).

They have just released 'ColorBurst', a colour hand scanner for the
Falcon. So I guess they are still alive, and writing for the ST!!!

Dunno about Easydraw upgrades though... Word was that they were going
to merge Touchup and Easydraw 3 into Easydraw 4, which was going to be
an Illustrator-like product.

In the meantime, check out Kandinsky, an *excellent* shareware
metafile editor, which uses Speedo fonts, proper bezier curves, the
Atari clipboard, dialogs in windows, etc etc. It beats the shite out
of Easydraw, IMHO.

I think you are referring to the VGA adaptor as made/marketed by Ladbroke
Computing of Preston, Lancashire. This sells for about 80 UKP , and allows
you to connect the ST to any VGA/SVGA mono or colour monitor. BUT it only
allows you to operate in monochrome ST high res which ever monitor you use.

If not, Sorry. Please tell us where we can get the adaptor which you were
referring to.

2488. Where can I find Mikenet

Newsgroup: comp.sys.atari.st
Date: 1993-11-25 15:13:06 UTC
From: Matija.Grabnar@ijs.si
Message-ID: <1993Nov25.161306.756@cathy.ijs.si>
Source record: 197755

A while ago someone recommended that I try a program called mikenet
to network my Falcon and my ST together through MIDI. I tried to find
it on the FTPs, but it doesn't seem to be there. I am certain it is not
on a.a. Can anybody tell me where to get it?

I tried using mxnet20, but it doesn't work under MiNT (because it's written
in Modula 2) and it doesn't support the really big sectors on one of my
partitions (nifty program other than that).

Yes, but where to get it from ????
I noticed only the last two or three posts on that subject,
so I may have missed some bits
telling me where to find Tera desktop!!!!

So please tell me where do I can get it ?? :->

thanks !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

You do realize there is already an 'official' (of sorts) Falcon compatibility
list, right? It's quite extensive and well updated.

There must be an echo here :-)

Anyway, I find the Chameleon unstable on my system. I have tried with TOS 4.01, 4.02 and 4.04. I have GEMRAM, SHBUF and WinX installed which may have something to do with it. I have identified the Chameleon as the definite cause of the problems.

2494. system for sale

Newsgroup: comp.sys.atari.st
Date: 1993-11-25 17:33:04 UTC
From: csullogg@cc4.crl.aecl.ca
Message-ID: <25NOV93.12330481@cc4.crl.aecl.ca>
Source record: 197751

I will be picking up a TT for use at home, which makes my home system
redundant. It consists of

-Mega4ST with AdSpeed 16MHz accelerator and TOS2.06
(clock speed and operating system same as the MegaSTE)
-SM125 monitor and an SM124 (124 hardly used)
-REFLEX graphics card for 1024x496 on either SM124 or SM125
-SC1224 colour monitor (again, hardly ever used)
-SLM605 laser and two toner cartridges (have to remove current to ship)
-FAST external drive with 50meg Seagate and 170meg Quantum drives
(drive has SCSI 50 pin connector and SCSI ID switch + DMA in/out)
-Spectre GCR with ROMs

Current Notes, November 93, has the following pricing ($US):
Spectre GRC + Mac ROMs $199+$129
SM124 $109 SC1224 $209 AdSpeed $189
Toadstore drive with 50meg Seagate and 170meg Quantum $229+$269

Without computer and laser, the total so far is $US1333 ($CDN1786).
I'll sell my system, as described above, for $CDN2000 with shipping
included (shipping alone will cost about $100). The REFLEX card cost
over $400!!!

For Atari user groups, see if members want part of the system. Likely,
it can be picked up as a bundle and split up with an overall savings
to each participant.

Note: on the TT which has a dead TTM195 monitor, I will put my own
IBM8507 (yes, IBM!!!) 19" mono SVGA monitor that I picked up new
for $525. Unfortunately, I can only go up to TT med rez so I cannot
make full use of the IBM monitor!

SA> It does not btw have Screenblaster or NVDI - could one of these be the
SA> problem???

I got this problem after editing the newdesk.inf file with 7-up.
This editor left an extra space at the end of each line, and probably did
other (not visible) stuff as well :-(

Cure:
Start with a fresh, uncorrupted newdesk.inf file, and if you have
to edit it, be sure to use a sensible editor (like emacs).

Erling

Yeah it does sound steep. I havn't seen the adaptor advertised but
Ladbroke are advertising SVGA + adaptor to run on ST for 150ish pounds.

btw all I want is to run my Notator (and maybe DTP prgs) in Hi res
on my Atari so no problem. I can connect a TV for color etc if I need it.

No, Ladbroke Computing doesn't check the position of the decimal points in its advertisements. And the ST magazines just copy the information over without questioning it! :-/

I forget how much I paid for mine (which I've never yet used, but I won't get into that long story...) but it was 1/10th of the advertised price.

Kevin

That's right. I read it a few months ago in one of the UK glossies (STU, STF or STR) on at least two occasions. It is not a simple adaptor, as the name implies.

It is not in the latest ads from Ladbroke (I just checked) but a while ago, they were advertising it for about 80 Pounds.

Steve Taylor.

Just a passing comment on background info...

> [...]
> In comp.sys.atari.st, gruber@austin.ibm.com (Gruber) writes:
>>> A couple of years ago, I remember hearing about a company that had a
>>> system based on a TT030 that would let you design things in Calamus,
>>> and it would drive a vinyl cutter to make signs based on your
>>> Calamus design...

Back in 89 vinyl cutting became a desktop proposition when Roland introduced the CAMM-1 cutting plotter at a competative price. Over the years a number of software packages (most often for PC, sometimes Mac) have appeared which allow this kind of desktop signmaking, more or less user-fiendly and effective. One of the more known in Europe for the Atari platform may be GMA-plot, which interfaces with Outline Art and of course Calamus.

Here in Sweden we turned out in late 89 a customized complete turnkey system based on the CAMM-1 with a Mega ST and Megafile. Our customers then were primarily interested in a ready-to-use "tool", not just software, and most did not have a computer anyways. With a Scandinavia's largest signmaker as a partner and consultant as to selection of program features and suitable outline typefaces, we felt that we got the most practical, reliable and easy-to-use system, not in the least thanks to the decision to go Atari. We based the software on preconfigured NeoDesk v2, propriatory outline-generating code (using licensed Bitstream and Agfa Compugrafic outline data), and used GFA Draft-plus v2 (later v3) as the actual plotting engine. We also got the added benefit of the CAD-package as an editing, scaling, color separating and previewing drawing tool. In the CAD part it was also extremely easy to place guiding marks, cut text inte overlapping sections, and do fine-detail editing (such as script binding of individual letters into a seamless whole). The design objective met was low-threshold default-settings beginner user "turn-on, type text, approve and cut" with minimum turnaround time for many similar texts, and an easy learning curve for the more advanced features when these were desired.

The resolution of GFA Draft-plus was adequate for the text dimensions possible with the CAMM-1 (width 50 cm), and although later use of the wider Roland plotter did suggest a need for a better vector resolution than GFA-Draft could provide when scaling up to these sizes, we (and our customers) still remain satisfied today with the price-performance relationship of this original design. The theoretically limited vinyl run-length (1.6m) of the CAMM-1 actually proved an advantage when we tweaked the system into producing unlimited-length cuts, since tracking precision problems were held to the CAMM-1 design limit of only having to track reliably over runs of this lesser length, not the full length of the text/design.

The software also ran successfully on the TT030 and later Mega STE, and on large-screen setups.

Users with Calamus could preview designs there, knowing that the cutting outline Agfa Cg fonts were form-identical with the Calamus CFN typefaces. Vectorization of logos and such took a while to realize, mostly due to a lack of suitably good scanners and vectorization software, but in the end AvantVector proved best.

d93rkr@t.hfb.se (Robert Krenn) writes:

>Yepp.... But do Falcon support such a high speed???
>I bought a SCSI-2 drive for my Falcon (Seagate st3390n, 343Mb, Fast SCSI-2)
>and I _ONLY_ have 900 k/s transfer speed. :^((((((((((((((

'only' 900K/sec... That's nothing to sneeze at - although I suspect something
fishy, as I get 990K/sec out of an old CDC wren-IV (scsi-I)

>I know this isn't a polite way of asking, but:
>Doesn't the Falcon support a higher transfer speed??????

I don't think so - the falcon uses the NCR 5380 scsi controller (seems to be
the same interface as the TT uses) which is really only good for about
a meg a second, less overheads.

How does one add new desktop icons so that they are recognized by TOS.
When I upgraded to TOS 2.06 on my Mega 4 ST there was an icon file
that came with it (from Oregon Research Assoc.), but I never could
find any docs which stated how to install these icons.

Maybe I'm dense, but I would appreciate any suggestions.

>{{{ Dan }}}

Buying font packs should be cheaper than buying the individual fonts.
Bitstream's price for a pack of four faces (eg Roman, Italic, Bold,
BoldItalic) is 50GBP. The WP6.0 font pack was 40GBP (total) for about
50 fonts. But there aren't many font packs...

The Hisoft packs are quite good value as far as I can see.

Bitstream UK's number is 0242 227377. They'll send a poster of Speedo
fonts free on request.

This comment is just a joke. If you look closer you will notice that
this assembles into some nice text to identify the library. There is
nothing that modifies this at runtime, and it is never executed.

Maybe Steve means the Atari Switchbox from Ladbroke (for use with the
Microvitech 1440 monitor) which costs 'under' 40 pounds, ie 39.99 pounds.
I haven't seen Ladbroke advertise an adaptor seperately. It's included in the
price for their monitors.

Thanks to those who replied about the possibility of using 1 meg RAM
and a virtual memory program to make up the difference.

Just about everyone recommended getting the RAM upgrade. Which I will when
I get a Falcon !!

Also I think the hard disk would suffer with the continual usage as virtual
memory on top of the normal usage for loading and saving etc.

>
>MicroEMACS 3.11 is on atari.archive.umich.edu:/atari/Editors (might be in an
>Me directory). There's also JOVE and Mutt2...

I've been using ST MicroEMACS 1.8 that came with MWC. It crashes
randomly, and once crashed. never works again (except from TOSWIN) when
installed as TeraDesk's Editor. I'm hoping a new one will make it stable
from both TOSWIN and TeraDesk (as the EDIT function).
I'll look for 3.11, thanks.

Version 3.12 of MicroEmacs has been available since April this year.
You can pick it up from midas.mgmt.purdue.edu in dist/uemacs312.

However that version, just as its predecessors, doesn't work properly
with MultiTOS/MiNT. Of a whole series of problems I fixed the most
nasty ones to make it usable again. I have been working with it for
about 3 monts now and I am reasonably happy with it. If you want my
fixes then drop me an email.

You could either use a Resource File Editor (e.g. ORCS (PD)) or the easier method is to get two programs from ftp sites, called ICONJUGL and MAKEICON. ICONJUGL is by Codehead Software, and allows you to change the order of icons in an RSC file, as well as deleting them and adding new ones. MAKEICON actually allows you to edit specific icons at pixel level.

2534. Re:MiNT and Neodesk 3

Newsgroup: comp.sys.atari.st
Date: 1993-11-26 13:40:56 UTC
From: mjw@crosfield.co.uk
Message-ID: <1993Nov26.134056.3503@crosfield.co.uk>
Source record: 197713
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Just a simple question on using MiNT

Is there any way of running Neodesk 3 under MiNT.
TOS version is 1.4

The problem is if you run up MiNT and then run Neoload (either from the desktop
or by making it autoload in desktop.inf) it says that Neodesk
must be run from the auto folder or the installed desktop and gives up. This is
reasonable as MiNT is running the desktop.

If you try and run Neoload in the auto folder, after MiNT nothing happens,
again reasonable because MiNT takes over when it is run and presumably will
miss out any other auto folder programs.

If you put Neoload in before MiNT it comes up but you get lots of errors
saying 'can't find resource file' and then MiNT crashes.

I suppose that one way is to fire up TOS 2.06 which has most of the nice bits
of Neodesk in.

Any solutions or idesa please !!

Many Thanks in Advance
Mike Wilsher

Ah ha!

that is the problem then, I was using the editor Everest to alter it and I've
just remembered it has an option to remove trailing spaces which was definitely
set to on!!

Whay hey, I'll go and fix it right away...

2536. Ramdisk XFS and MiNT 1.08

Newsgroup: comp.sys.atari.st
Date: 1993-11-26 13:59:21 UTC
From: mm68@unix.brighton.ac.uk
Message-ID: <1993Nov26.135921.1365@unix.brighton.ac.uk>
Source record: 197717

I have just compier v1.08 of MiNT wit the -DONLY030 and -DMULTITOS options, but after a successful compile and install I now find that I cannot use the Ramdisk XFS. The Minix XFS works just fine, so I am thinking that it is maybe a problem with th randisk. Has anyone else experienced problems with this?

I had to modify the code a little and include the <falcon.h> header as mem.c was complaining about Vgetscreen and -xbios being undefined. I cannot see this as being the cause myself, but then again... :)

Any help would be appreciated as I really found a resizable ramdisk to be real handy.

Pads

ps. I was using the MiNT version of GCC v2.5.1(?) and the patch level 93 libs.

> Any suggestions?

When in the 'Edit' mode of the 'Dial' drop down menu, double click on the name of the BBS in the dial directory.... you will see that you can further set up each BBS for 'Serial Port', 'Terminal', and 'Auto-log-on'.

It's just a guess, as the description of your problem is not that detailed. I have been using Storm and nothing but Storm since it was released and have had little if *any* problem with the demo version. Page is now working on releasing the full versions.

2539. Printer for Sale

Newsgroup: comp.sys.atari.st
Date: 1993-11-26 14:59:38 UTC
From: vctec@westminster.ac.uk
Message-ID: <CH3tnE.MvE@westminster.ac.uk>
Source record: 197722
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Dear Netters,

Anyone want to buy a 24 Pin printer?

It is a Star LC-24/10 Mono.

Reason for selling is that I have moved on to a HP Laserjet 4L, and have no use for the dot matrix. Also, I want to buy a Towercase for my STe, and need some money....fast, before the Northern venue of the Atari Show. I have also been on the lookout for HardDrive mechanisms and am strapped for cash to buy the tower.

The printer is in good working order, with all manuals, and box(also in good condition). There are also 3 reinked ribbons (only reinked once)....so you can see that the printer has only been through 4 ribbons (3 orig + 1 reinked).

Can be seen working.

So, please amil me with 'sensible' offers.

Yours in anticipation,
Danny.

^^^^^^^^^^^^^^
Perhaps you made a typo, but for MiNT you should use the mintlibs
(patchlevel 39) and not the gnulibs (patchlevel 93).

I was talking about the support from the authors BBS here in the USA. You
obiously have another a more friendly support team to deal with than I did
here in the states from the Author himself. Which in my mind, does not speak
well of Rat Soft itself.

Besides, I'm extar glad I stopped supporting Rat Soft when I read that the
Rat Soft support BBS was one of the BIGGEST pirate boards in the USA.

I have just managed to read 1.5MB in a second using the OS rwabs(). That means that the Falcon can read at least 2MB a second. My hard drive is a 210MB Maxtor, not the fastest available.

Give us a break, you are not serious when you say that a BBS will coexsist with other software running on a 8 or 16mhz computer. MultiTOS will need a 50mhz machine to run a BBS and other software at the same time.

Now that I see your name here, I see that you were involved in the Big IAAD investigation aswell. It's too bad that people like you have spent so much energy hurting Atari devlopers.

>| Iain R Laskey | Atari Falcon user and very happy with it! |
>+---------------+---+
Yeah,

Indeed, the Mega STe is a great choice. Good compatibilty (compared to
the TT030), good price (Compared to TT030), good performance (compared
to the 1040 STe) and certainly a good price/performance.
Nice house (same as TT030), and SIMM memomry upgrade.
TOS 2.06 (High Dens. Disk supported) with lots op features.
So, I would say, get yourself a Mega STe.
(Ths of course IMHO)

2549. pfx-ish compression for text files?

Newsgroup: comp.sys.atari.st
Date: 1993-11-26 16:31:00 UTC
From: jtrimble@sdf.lonestar.org
Message-ID: <CH3xvo.tD@sdf.lonestar.org>
Source record: 197672

Can anyone reccomend a way to compress a text file (spelling checker wordlist) so it will self extract. It's about 15% too big for my largest-formatted disk, but I'd like to be able to keep the whole list (rather than edit out words). I tried a program called pfx, which seemed to work fine to compress spell.prg, but it didn't seem to work to make a self-extracting text file that spell.prg could read--or that I could print to screen for that matter.

Thanks
John Trimble

2550. Atari Stores in/around Toronto, Canada.

Newsgroup: comp.sys.atari.st
Date: 1993-11-26 18:41:30 UTC
From: alrashi@ecf.toronto.edu
Message-ID: <CH43x7.A3n@ecf.toronto.edu>
Source record: 197730

Hi!

Lately, there have been a number of people asking about retailers
in the Toronto (Ontario, Canada) area. Well, being the maniac I am,
I've decided to try my hand at compiling some sort of list for all those
current/potential Atari users here!! Here are some that I've come up with.
Most of the below info. came from the October 93 issue of "Toronto
Computes!", so if you wish to crosscheck, go ahead. Feel free to correct
or even add to the below information...Although if you want me to add
to my own list for later reposting, I'd advise mailing me a copy of your
addendum. Oh yeah, feel free to disregard my comments (all IMHO), or
even challenge them, although a flamewar would be slightly uncalled for! :)
Thanks for the time (and bandwidth!)

AcEzE /.^J

--------------------AcEzE's Atari Retailers List V1.0------------------------

Atari Retailers In (and around) the Toronto area (that's Toronto, Canada!)
****

1) Replay Entertainment.
Village by the Grange,
71 McCaul St., Unit K2
T.O. M5T 2X1
(416) 598-1992

Comments:
This is my supplier! Proprietor used to be in Atari Canada...so he knows
what he's talking about (a big plus). If you want a Falcon, he can usually
get one in a couple weeks (he orders them direct from Atari, I think).
I'm not sure about the TT though, as they're pretty hard stock to find!
(But you all already know that!) Nice selection of Atari/Amiga/Pc softs
in the store...if a tad pricy. Will do mail-ordering for ya to (at least
the last time I talked to him) Highly recommended! :)

2) Compuplace.
3585 Keele St.
T.O. M3J 1M7
(416) 633-8667

Comments:
Well, I've never been here, but I have heard good things about the store...
If you live in the neighbourhood, give it a try... They're still advertising
Atari allegiance, so they can't be all bad!! :)

3) Scarborough Computers.
2190 Warden Ave.
Scarborough, Ont. M1T 1V6
(416) 491-3139

Comments:
Urrrrm, I have no clue what this store has to offer as I've never been there (it's all the way in Scarberia!! :) Still, they seem to be advertising Atari allegiance as well, so give it a try...!

4) Compuworld.
4800 Sheppard Ave. East
T.O. M1S 4N5
(416) 299-8191

Comments: More or less the same comments as 2) & 3)! Try it out!!!

5) Long and McQuade
925 Bloor St. West
(416) 588-7886

Comments:
Well, this place is a Music store, so don't take whatever they say about computers with a large grain o' salt! :) Haven't been here for a while, but they still seem to want to sell Atari's so... You _probably_ will not find any trace of a TT in this (or any of the other) music store/s. Still, great if you want to check out Midi softs.

6) Marketron Computers
700 Lawrence Ave. West Also TD Centre,
Lawrence Square P.O. Box 150, Concourse
(416) 256-7000 (416) 666-3168

Comments:
Strangely enough, I didn't even _know_ this place supported Atari goods till a little while back!!! So in that light, I can't really offer you any real advice other than...check it out! :)

7) Progeni Computers
3270 Yonge Street,
2nd Floor.
(416) 322-6512

Comments:
Hmmm, this is a second-hand dealer, so if you don't mind getting 2nd hand, I'd suggest looking in. However, they rarely have any Atari hardware in the house...however, they do seem to have quite a bit of 2nd hand software here (hey, I got Captive here!!!) If you're looking for hardware though, I'd suggest calling first to see if they even _have_ any...

8) Saved by Technology Inc.
10 Breadalbane Street
(416) 928-6434

Comments:
Once, they used to be pretty pro-Atari, but I guess times change... They
seem to be _really_ pushing the Mac in this store... But they still have
to sell Atari's (Ha!) because of the users that bought Atari's in the past.
Not bad midi selection (last time I checked), but the hardware section...
well.... Try it out if you want. No promises from me though! :)

(Etobicoke area)

9) IBA Computers
3344 Lake Shore Blvd. West
(416) 253-6169

Comments:
Never been here, so don't look at me! :) Try it out, is all I can say...

(West of Metro)

10) Computer Accesories Inc.
1238 Lakebreeze Drive, Mississauga
(905) 543-6030

Comments:
Again, I've never been there (I don't have a car!! :( ) So, check it out
and lemme know...

11) Lum Tech Public Domain
2300 Southmillway, Unit 424, Mississauga
(905) 820-7251

Comments:
Well, I guess this store doesn't specialize in Hardware! :) Anyone wanna
go over there and find out how good the selection is??? :)

Someone over here had a BBS running on a Mega-STE under some Multi-Tasking
software (I forget what). And no-one had any complaints!

BBS's don't really put too much strain on the system, all they are doing
is accessing data-files & stuffing the data down the modem. Much
like multi-tasking the comms programs, which works very well!

(I've been downloading 300k files while typing out doc's, and still got
the usual 260 or so CPS, (Yes, a mere 2400bps modem, with MNP 4).
The strain on a BB wouldn't be too much more! And on a Mega-STE it'd
handle it! (I've got a 8Mhz ST)

2557. Atari STacy computer & SC1224 Color Monitor

Newsgroup: comp.sys.atari.st
Date: 1993-11-27 02:06:02 UTC
From: tsaylor@ecst.csuchico.edu
Message-ID: <2d6cmaINNo38@charnel.ecst.csuchico.edu>
Source record: 197736
Cross-posted to: comp.sys.atari.st,misc.forsale

For sale: Atari STacy computer

with: 1 Meg RAM
20 Meg hard drive
Internal battery pack
Built-in MIDI port (also parallel and serial)
Notator - music sequencing and notation software
Word processing software

This is Atari's portable computer, and it's perfect for musicians!
Word Perfect or Microsoft Write may also be included in the deal.

Asking: $700/best offer

Also for sale: Atari SC1224 12" Color Monitor
This can be used with other Atari systems, or with the
above STacy.

Asking: $100/best offer

- or-

$750 for both.

If interested, e-mail tsaylor@ecst.csuchico.edu, or call the owners
at (916) 393-3222 (owners do not have net access, but I can reach them).

>PC, I am thinking of buying a PC-emulator.

>Thanks for your time.
>Bye,

I have the ATSpeed C16 emulator card and it can access the Serial port
over the COM port of a PC program. My modem came with a PC program which
normally works ok. You can get a few problems occasionally, but so do ST
com-programs.
Oh, yes, it seems that the version of ATSpeed I have is limited to 2400
baud. So the fax option of the PC program will not work, and I have to
use an ST program for that (9600 baud)

Apparently they company was/is (i don't know) working on an improvement,
but I haven't heard anything yet.

Anyway, I hope this is any help.

Michael

Um... actually, Atari has had no MONEY to improve tha Falcon. The delays in
production caused them to use up whatever capital they had left in order to pay
the bills. With the Jaguar now out, they should have some money rolling in
again. I think the Falcon will improve within a year. Sure, call me a wishful
thinker, but I take that as a compliment.

Ok, I want to ask a question here:

Remember when CD's first came out? They were supposed to become cheaper
than vinyl (it's cheaper to make CD's than vinyl, right?). Now, instead
of paying eight or nine bucks for an LP, you pay around fifteen. OK, you
do get more music usually, but it still doesn't make the product more
affordable. My reaction would be to buy some music, the stuff that means
the most to me and then find someone who has other stuff and tape it. If
music were cheaper, I'd definitely buy more.

The point I'm getting at is: wouldn't more musicians buy Cubase or Notator
if they could afford it? What if it sold for $100 instead of $400 (or
whatever those programs cost at the moment). Has any software publisher
tried this out?

AB> QuickBBS ST V1.10 runs under MiNT in a TOSWIN (or whatever) window,
AB> too - if you switch off the statusline. (The statusline is written to
AB> the screen using LineA.)

I bought a Falcon030 now. After this hectic period (xmas time in the shop) I will make it work even better under MiNT. Mind you it would ONLY work on a TT or Falcon.

I have a driver for the serial ports for the TT and Falcon now, I don't known machine language so I will need some help from a friend :-)

I will also make QuickBBS ST/TT/FC :-) compatible with the filelocking system of Multitos. In theory that would mean that network drivers that use the same protocol can also be used for a multiline environment.

I will have a look to see if I can run it inside an own window, would be a bit faster then using TOSWiN, which slows things down a lot.

AB> (I think that's rather astonishing for a GFA Basic program in the
AB> size of QuickBBS...)

It's fairly well written :-) (thanx to Jon). We always treid to use official systemcalls (not always though).

PS I will move from Fido/NeST more to Internet/Usenet. I personally had it with the Fidonet type of nets. Internet is more to my liking.
You can get QuickBBS ST support here too now.

PS2 I bought a PowerCD CD-Rom drive. So you can expect some very nice CD-Rom support (it's possible with the current version too).

I've seen a lot of these really neat pictures that are made up of ASCII characters, but are drawings!
Someone showed me that it could be done in UNIX, but it seemed quite complicated with all the commands.
It took a GIF file (or whatever) and converted it to a picture made up of ASCII characters.
Is there some program like this for the Atari ST available, and if it is, where can I get it?
Thanks.

Hallvard

There is no way to add an external Floppy to the FALCON (except an SCSI one).

Source record: 197671

I really don't think that Cubase is a good case study. As far as I can see, they've priced themselves to a market, and they make enough money by selling the product they have at the price they've set. A person with a pirate copy of Cubase is unlikely to be a professional musician, and is also unlikely to be able to afford Cubase. If they never had any intention of buying it, and have been priced out by Cubase's authors, ho has anyone lost anything? It's more likely that a person with a pirate copy would use the software, and then want to buy it (either save for it, or use their pirate copy to make enough money to buy the real thing).

Piracy of games sucks, but then again so do most games.

It's an FPU-less '040 machine with a '486sx card in it... Kinda like the Falcon '486 emulator everyone's been waiting (and waiting and waiting and...) for.

Right now, the biggest barrier in getting people who don't know any better away from DOS (the operating system from hell) is that they don't want to give up those evil programs (ex, Word Perfect) that they took so long to learn (despite the fact that modern word processors are easy and intuitive to use... except Word Perfect). Giving them the ability to run all that crummy software, until they get around to finding replacements for their new system, is a great idea.

I suspect many more Falcons would ship if DOS people could run their crummy programs on it at a decent speed; they'd eventually spend more time in the Falcon interface (IMHO, GEM is still much better than Windoze) and want to use applications in that interface. The same is true for Macs, Amigas, etc, etc.

Fnordadel works fine, too, and you get the C source code (I like to recompile things every now and then when better compilers and newer versions of the MiNT library become available)... I've had too many problems with GFA BASIC programs under MiNT (like the uucico in Hermes UUCP!).

This kind of crap really bugs me... Can't Atari follow logical programming
practices?!? It's a _text_ file; they should read it line by line. The
"speed hit" can't be _that_ bad, really.

Only 30 hours?!? You're much faster than I am! I'm a real clod when it
comes to using bezier curves... it'd probably take me twice as long! :-)

> SpeedoGDOS font editor maybe? (Sound like fun...)

I've never heard of such a beast on any platform...

> Anyone have specs on the format?

I think you have to pay serious bucks for it, and then you're not
allowed to pass on the information (ie, distribute a font converter in
source form; dunno whether you could distribute a binary or not).

Tera-desk uses standard icon files such as New-Desk (e.g. TOS 2.xx+),
so pretty much any RSC editor will manage it, the best I've seen
is 'ORCS' (Ottos ReSourCe Construction Set). Great little program, it
should be in the atari/Utilities/ directory of atari.archive.umich.edu!

I FTP'd PGP from the German site you suggested a couple of months ago, Wolfgang, but I could never get it to run. I'm not sure I grabbed everything I was supposed to have. Could you repost the FTP address and tell me every file I need to get? If I've got all the files I'm supposed to have, I must be doing something else wrong, because everytime I try to generate my initial pair of keys I crash back to the desktop.

I'm trying to build a gcc cross compiler on a BSDI system, to generate ST executables.

So far I've built cc,gcc,as68k and ld.

Now I need a libgcc.a file, according to the docs it *cannot* be created with gcc ????

Any info on what I need to do/get to create the libgcc.a file would be appreciated.

Hi!

The source-diffs to the original PGP23A sources are in the file pgp23ast.lzh.
The Readme of this archive:

```
------------------------------------------------------------------------
Get the pgp23a sources somewhere, copy the two st-* files into the src
directory, apply the diffs in srcdiff to the files in src, compile with GCC.
Steven Ourada -- sourada@iastate.edu
------------------------------------------------------------------------
```

The sources are in the file pgp23srcA.zip.

Several people don't use the GNU C-Compiler so i put a compiled version of
the program (the one i use) on our ftp-site. The archive with the docs
and the compiled executable is pgp23ab.lzh. This file should be the only
one you need to run pgp.
I'm not using mint (or Mtos etc.) so i don't know if the precompiled pgp
is working on all mashines. In doubt compile the prg yourself. In this
case you need the files pgp23ast.lzh and pgp23srcA.zip.

All mentioned files are available from ftp.tu-clausthal.de in the dir
/pub/atari/misc/pgp/*. Get them via FTP, FSP (FSP_HOST 139.174.2.10,
FSP_PORT 21) or via email from "mail-server@ftp.tu-clausthal.de".

Bye,
Wolfgang.

Hi!

Your mail-server seem to be buggy. Mail to "rz.tu-clausthal.de" should go
to sodom.rz.tu-clausthal.de (there is an MX-record in the nameserver).
The address Ley@rz.tu-clausthal.de is an alias to the following address:
"bwwl@sun.rz.tu-clausthal.de".

Bye,
Wolfgang.

>Windoze) and want to use applications in that interface. The same is
>true for Macs, Amigas, etc, etc.
>
Nice idea, but I don't think it would work like that. People don't buy
a macine primarily to run a different machine's software. In the case of
the Mac people probably will buy it either because:
a) They already have a Mac and would like to be able to run PC software
as well
b) They use PCs but would also like to run some Mac software.

Case b) are the sort of people who might buy a Falcon to emulate a PC, but
first they've got to have heard of the falcon, and heard of software that
they'd really like to be able to run.

In short its unlikely to work because Atari don't have apple's reputation.

Kev

Yet another stupid arbitrary limit that affects the _users_ more than it
affects the programmers of the AES.

> a) remove such "silly" limitations (I put silly in quotes because it is not
> immediately obvious why these limitations still exist, although I'm sure there
> used to be a good reason)?

These days, there are _no_ good reasons for arbitrary system limits...
What is this, DOS?

> b) make importing of icons an easy, if not intuitive, process?

The best I've seen for this is OS/2 or the Mac... you open the
information dialog for the file (or the settings notebook for the object
under OS/2), and there's an icon there. If you want a new icon on that
object, just drag another one over top of the old one. No problem.

I don't think I've ever heard of a way for _users_ to add icons;
ideally, we should be able to open the Information dialog for a file,
and drag another icon into it (and the desktop should be able to read
NeoDesk icons, Gemini icons [just a plain RSC file], etc... whatever
there format has a large number of icons). Then again, I guess that
would require smarter programming of the Desktop (the Info dialog would
need to be modeless so you could get at the icons).

Its this kind of user-unfriendliness that lowers people's opinions of
the system; it's REALLY easy for a Mac or OS/2 user to customize their
icons... it's hard for a Windoze user to do it... it's very hard for
an Atari user to do it.

Has anyone ported the unix version of lha to MiNT? I had it compiled at
work (must've gotten the source from ftp.uu.net) and it could handle
-lh1-, -lh2-, -lh3-, -lh4-, and -lh5- compression. All of the
documentation was in Japanese, but it wasn't difficult to compile.

2596. TOS Icon editor?

Newsgroup: comp.sys.atari.st
Date: 1993-11-28 14:53:21 UTC
From: rrice@netnews.upenn.edu
Message-ID: <2dae11$d4a@netnews.upenn.edu>
Source record: 197669

Sorry to be obtuse...

BUT...with all this talk about editing icons for TOS 2.0X and the Falcon, I may have missed this.

IS there a color/monochrome PD/Shareware icon editor that would work on a Mega 4 STE color system running TOS 2.6? I uploaded huge numbers of icon resource files to Michigan and John Eidsvoog's ICONJUGL program that allows people to use them, but I can't draw or convert my own. I'd like to. Am I missing something? Could some such allow me to use pieces of art files? I thought DEGAS Elite would, but I couldn't make it work...

Thank you!

You ought to upgrade to 8M of RAM (I assume you've got 4M; 99% of new
Intel-based PCs seem to come with only 4M) and a real OS like OS/2...
OS/2 is the king of the hill for Multimedia on Intel-based PCs; nothing
else can do ~30 frames/second _in_software_ and keep the sound synched.
Oh, and you can do telecommunications at 19.2k baud while doing it, too.

They've already (supposedly) done the work for designing a Falcon040;
using an '060 would be (IMHO) stupid... it's going to be an _expensive_
chip. Same for the PPC604.

They ought to use a PPC601 and have a 603-based laptop.

They ought to release a FalconTT in a real case.

I don't think they'll ever release another computer.

Evan, this is news to me. When did Atari say that TOS 1.0 and 1.2 should
no longer be supported? I must have missed it.

I don't think that my customers that have older systems (and are still using
them successfully, with the appropriate AUTO folder patches) would be very
happy if I suddenly told them they'd have to upgrade to TOS 1.4 or higher
if they wanted to keep using my software products.

>NBA Jam is THE most popular game in the arcades. I know several people who
>have spent enough money on it to buy a Jaguar. Here it is, ATARI, just do it.

Whoa! Calm down, Tex. Firstly, while NBA JAM is popular, it's not _that_
popular. Check out rec.games.video.arcade; NBA JAM is already losing ground
to the next batch of fighting games (SUPER STREET FIGHTER II, MORTAL KOMBAT
II, SAMURAI SHODOWN). Secondly, even if Atari could get the rights, would
they be able to get a Jaguar version out in time to capitalize on it?
Doubtful.

Moral of the story: Atari should worry less about flash-in-the-pan fads and
focus on solid games, quality control, advertising and availability of
units. Let the third-party developers work on the flashy titles.

>Just a thought. Anyone know about home versions of NBA Jam?

Super Nintendo in 1994. From Acclaim, I believe.

AHDI can be configured to either "standard behaviour" (as described
above), search all unit numbers, or search a configurable choice of ACSI,
SCSI and IDE units. In addition to that, one can configure IDE drive's
sleep mode delay, drive letters to be reserved for removables and
additional folders for TOS <= 1.02.

Should be enough. Use HDPATCH.PRG (from Atari) for configuration.

bye, Peter

PS: The above is true for AHDI >= 5.00.

>
>I know this isn't a polite way of asking, but:
>
>Doesn't the Falcon support a higher transfer speed??????

It does. I have a Fujitsu M2622 on our demo unit, and HOW-FAST.PRG
measures a GEMDOS file throughput of 1800 KB/s (read access) and 1450 KB/s
(write).

Larger Seagate drives like 3390N, 3550N, 3655N have about 1500 KB/s and
1200 KB/s.

But note: RateHD doesn't display correct rates for faster drives !!!!

bye, Peter

Unfortunately, I don't believe the final version was ever released.
Which is a crying shame as I think even the demo version is brilliant
and runs delightfully fast on my Falcon...

Falcon Videoboard.

After reading the articels about the F030 in the latest mag of STF, I was most disapointed in that the video board available could not grab true colour pic's from the video without fiddeling about with 3 sepreat coloured grabs.

I'd like to be able to show realtime video in a window, (like you can on PC's), and also grab sequences in realtime to HD. Is there any reason that this can not be done on the Falcon? And would such a task use so much CPU power, that it would render the machine useless to perform another task while it was going on. (Just the TV in window bit here?) Prerably then under MTOS, so that one can have the TV in a window while doing something else at the same time.

Also, since the F030 should have to connector, one to a TV or similar, and one to a monitor. Would it be possible to show two different pic's. One workscreen and one graphics screen.. (That would be cool.)

src.doc.ic.ac.uk (146.169.2.1)........./packages/atari/uni-paderborn (uni-paderborn,
GERMANY)

DOWNLOADING FILES, Instructions:
--------------------------------
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR] OR use the number address,
NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once. i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having to reply "y" for each
file
when asked "get {filename}?".
12) close [CR] to end (go back to ftp and
13) quit [CR] to go back to UNIX or.......
14 bye [CR] to end and go back to UNIX

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
```

- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs
were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate uncompress program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...)
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an
other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer.
i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

2611. STacy STuff

Newsgroup: comp.sys.atari.st

Are there any utilities out there specifically for use with the STacy?
Perhaps a PowerBook like accessory that allows you to monitor how much battery
power you have left?

What are the names of the patch programs I need for TOS 1.04?

When I looked, I didn't see an ST binary, only MS-DOS and MS-Windows versions. I brought the code in only to find that it would not compile with Mark Williams C V2.0. (Although I did manage to get it built under VAX/VMS and OpenVMS AXP.)

The documents that come with the distribution state that for a $25 fee, you can get an up-to-date binary and printable documentation. I sent a check about eight weeks ago and have heard nothing....

So it goes.

2614. Wanted Used ST games

Newsgroup: comp.sys.atari.st
Date: 1993-11-29 01:41:00 UTC
From: lang@lars.acc.stolaf.edu
Message-ID: <1993Nov29.014100.14251@news.stolaf.edu>
Source record: 197694

I am interested in purchasing used games for my ST. Hopefully in excellent condition with complete manuals and boxes if possible. I've had my ST since 1986, pretty much stopped using it in 1990, and now I've found more time for it. Interested particularily in role-playing games such as the Phantasie or late Ultima series. Also interested in any Rogue-style games.

I'm willing to spend between $5 to $15 for most items, depending on how much it interests me.

Also if any one has a Lotus-like spreadsheet that will work reasonably fast on a 1040 ST, I would be interested in that. I am currently using Lotus 123 on PC Ditto to do my spreadsheet work and it is horribly slow. A Lotus-clone would be ideal.

(rather
> than edit out words). I tried a program called pfx, which seemed to work

To create a self extracting archive, use SFX for Lharc archives or
ZIP2TOS for zip files. If you want the file to be self-extracting in
real time, i.e. it expands automatically when you access it from another
program and compresses itself when writing out, you will need a program
like DC Data Diet. There is a PD program (can't remember the name) that
is supposed to do similar stuff but does not really seem to work well.

2620. Snapper v0.2 FTP Software DatabasE

Newsgroup: comp.sys.atari.st
Date: 1993-11-29 03:01:04 UTC
From: karlm@highett.mel.dbce.csiro.au
Message-ID: <2dbolg$o34@news.dmpe.CSIRO.AU>
Source record: 197604
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

Hi there everyone out there in Net-Land!

Well today, after many problems (mainly finals ...) I release the
first official copy of SNAPPER. A few of us (Erlend, Hermann and I)
have noticed that there is a sad lacking of an information system to
find out what software is available for the good old ATARI range of
computers by FTP, so we created a project called SNAPPER. SNAPPER
is/will be a database of all the software we can find for FTP'ing.
The database is similar to the FISH index on the AMIGA (bleurgh ;^))
and the LINUX operating system. By compiling a database of what is
available, we hope to aide those "I've need of a XXXX type program.."
requests, and to ensure that people can always get the latest
software versions. A brief synopsis is in the file itself, as are
the instructions. We welcome all your comments, suggestions, praise!?
and hope that everyone will participate in the project by filling out
entries for us.

Well that's about it, If you have problems, whatever, feel free to
drop me some e-mail at:

karlm@mel.dbc.csiro.au

and I'll endeavour to reply to everyone!

Best Regards,

Karl.

----- 8< ---- CUT HERE FOR SNAPPER v0.2 TEMPLATE ----- 8< -----

```
------------------------------------------------------------------------

SNAPPER - Atari FISH Software DataBase Template

e-mail this to karlm@mel.dbce.csiro.au,
and a copy of the software as well if possible.

+-----------------------------------------+
| Release Date : Friday November 11th, 1993.|
+-----------------------------------------+

------------------------------------------------------------------------
+---------+
| HISTORY |
+---------+
```

Snapper is a DataBase of information about each of the software
packages that are available by FTP for the Atari range of computers.
It was thought that an indexing system whereby people could easily
search for particular types of software, updates of previous software,
etc. should be created. After seeing similar systems on the Amiga
range of computers, (such as the FRED FISH series), and the LSM (Linux
Software Map) for the Linux operating system, it was deemed that not
only was such a tool useful, but in light of all the different sites
around the world which are growing, it is almost a necssity. And so
it began ...

Why 'Snapper'? Well, Snapper is a breed of FISH ..... ;^)

Credits go to Erland Nagel (error@stack.urc.tue.nl) and Hermann Samso
(S_SAMSO@irav1.ira.uka.de) for getting me to do this (even though I
should have been more logical in thinking ... %@))

```
+---------+
| UPDATES |
+---------+
```

New versions of this document will be uploaded to two main sites
directly,
* The University Of Michigan Archives (atari.archive.umich.edu),
* Universiy Of Kaiserslauten (ftp.uni-kl.de)
as they are released. Updates will also be posted to the newsgroups
* comp.sys.atari.st
* comp.sys.atari.8bit
when updated.

```
+--------------+
| INSTRUCTIONS |
+--------------+
```

Firstly, when submitting, ALWAYS use the template below. Not only
does it save time for the Snapper maintainers, but it also stops us
from learning hieroglyphics, etc. ;^) Please submit all entries in
English! It doesn't matter if the english is bad, just make it
understandable. Entries in languages other than English will be
deleted.

Now the key rules.
1. Fill in as much as possible! This usefullness of this DataBase
depends entirely on how much information you can give, so fill 'em
up!
2. Don't delete anything! If you don't have anything to add in, just
leave it BLANK.
3. Also, as above, don't rename anything. If you have suggestions
for changes, e-mail me, Erlend or Hermann, and we'll try to
integrate your ideas into the next revision. Otherwise,
leave the sheet alone!
4. Once finished, e-mail the completed copy to me
(karlm@mel.dbce.csiro.au)!

5. Also, if you notice any changes or corrections that are necessary,
mark them on a copy of the template. This makes it easier for me
to understand changes, and it also aides you in trying to explain
the changes!

Thanks for putting in the time and filling out this template. Your
time and enthusiasm will help all Atari users out there, and your help
will ensure that the Snapper DataBase will continue to become a
trusted resource in the Atari Community.

Best Regards,

Karl.

(Karl Meyland) (karlm@mel.dbce.csiro.au)

Sample Guide :

Program Name : The name of the program!
Program Type : Ray Tracer, Text Editor, Sound Editor, etc.
Version Number : Revision number - i.e. v1.0.a
Release Date : The date this version was released - DDMMYY
Intended Systems : Falcon 030, STf, etc.
Minimum Requirements :
Memory : 1 Mb ST Ram, 1 Mb TT Ram
Processor : 68030, 68881
DMA-Sound : Not Necessary
TOS Version : 1.4 +
Other : Joystick, NVDI v2.5, etc.
8-Bit Prog? : No. - Is it intended for 8-bit computers?

I think thats just the way Speedo does things, since they licence their methodology to anyone who will pay, they don't want any cross using of fonts. I think we can chalk this one up to the Speedo boys. Although it WAS a smart idea to go with a cross-platform font.

Not really, with ORCS you can pull in icons from another RSC, or from the ones you create with the program. I have several hundred in my file on my MSTe and my TT030.

2627. Re: A bug in NewDesk under TOS 4.04 on Falcon?

Newsgroup: comp.sys.atari.st
Date: 1993-11-29 04:15:20 UTC
From: wells_s@jethro
Message-ID: <2dbt0o$bs1@golem.wcc.govt.nz>
Source record: 197606

After a suggestion from Warwick, I'm starting work on a full NEWDESK/DESKTOP
INF file editor. The tricky part is the interface, the program itself
will then come easy! The right number of spaces has to exist on the '#d'
line, otherwise, as said, the desktop ceases to operate properly.
(I know mine does!). I should even be able to make a resolution
independant desktop adjuster, so you can have a desktop that looks the
same for every different resolution. (Only really useful if you use
something like Superboot which can select the different res's!).

I won't be able to support falcon res's, as I don't have, and can't get
a Falcon to test it on!

From: raymond@sys6626.bison.mb.ca
Message-ID: <4TDRDc3w165w@sys6626.bison.mb.ca>
Source record: 197613

Hi first time at doing this on this Board.
I'm looking for a DC PORT to allow me to run a multi line board on my ST, these boards anr no longer available, and I think they were made by Mishtron, which if I'm correct is also no longer around. I'm using a MEGA STE which I have run multi line but I don't want to tie up my GOOD computer, I thought I'd use an older 1040 ste for the board with hard drives of course. If someone knows where I may get one or knows how to build on please get back to me.

Is it worth it? Speedo GDOS just doesn't impress me from the sound of
it. I hear compatibility is not very good, it does slow printer output
(geez it uses BIOS character-by-character output!), and the number of
drivers is limited. Not to mention that Speedo isn't the most popular
of formats.

I's like to see someone create either a new GDOS that used a more popular
font format, or a font converter like yuo mentioned to be able to convert
fonts from a popular format to Speedo.

As for postscript, there is a program around that will convert Metafiles
to postscript. And of course, once in postscript you can use GNU Ghostscript
to drive your printer.

If only ATARI were to spend some money on programmers to take care of this
kinda stuff.

On the contrary... It's called AFX and works beautifully! I've never had one
problem with it. Gets 50k/second on a stock ST, more on a faster one and
saves lots of precious disk space. MUCH more stable than Data Diet.

>ABARBIERO@Delphi.com

As a matter of fact there IS a genlock and framegrabber available from JRI.
However there is als one from Wizztronics (Genlock/Framegrabber), and I think
Titan Designs in the UK.

Microdeal/Hisoft have a nice, inexpensive Frame Grabber solution as well as
MATRIX in Germany, both can do virtual color grabbing I think, what I mean is
that even though you are no in 24bit, it would still grab in 24bit.

Not the right way to put it...but then again it's 3:35 am here now <grin>

As for the Falcon to display to separate displays on TV and/or VGA or Monitor,
I don't think that is possible at all.

Yat

2638. PPP for Atari ST?

Newsgroup: comp.sys.atari.st
Date: 1993-11-29 09:20:53 UTC
From: partingt@fwi.uva.nl
Message-ID: <2dcetl$52n@hermes.fwi.uva.nl>
Source record: 197614

Hi everyone,

Does an implementation of PPP exist for the Atari ST?
PPP (Point-to-Point Protocol) is a protocol like SLIP to connect to the
Internet via serial lines.

Thanks, Vincent.

Did anyone write a prog to configure the laserjet 4L with the ATARI ST?
There is only a MSDOS version available, perhaps you have got some document-
ation about it, like transmit-protocol, codes and so on.
Thanks everybody

Mathew

2640. (Now) Thinking about OkiLaser 400's (too)

Newsgroup: comp.sys.atari.st
Date: 1993-11-29 09:43:00 UTC
From: 01mbmccabe@leo.bsuvc.bsu.edu
Message-ID: <1993Nov29.044300.25183@bsu-ucs>
Source record: 197620
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Well, after a short discussion with a close relative, I am now considering an OkiLaser 400 (as well as the Cannon BJ200).

I would appreceiate any reflective comments about pros/cons/compatibility/et al.

BTW, my dad has this laser printer and really seems to like it. Over Thanksgiving I did some printing from Wordperfect and Drawperfect. My results seems to show that text-printing is outstanding (beats the daylights out of my Panasonic KX-P1091i I'm using presently!! :), but I'm unsure of graphics -- the Drawperfwect output seemed a little chunky, but I think I might have had Printer Control set to output "medium quality" graphics. Is "high quality" a marked improvement?

Also, I'm thinking that bumoing the '400 up to at least 1.2 meg would be ideal -- how much will this upgrade cost me?

Also, what about toner/drum replacement cost/ease?

Thanks for _any_ information! :-)

Message-ID: <095314Z29111993@anon.penet.fi>
Source record: 197616
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit,comp.sys.atari.advocacy

Followup-To:comp.sys.atari.advocacy

!The Jaguar 64bit game machine has arrived! It is packed with a
action strategy game called Cybermorph (similar to Rescue on
Fractalus) that is fun and absorbing. Keep a watch out for
DOOM from id Software and 3D Aliens versus Predator too.

Ok to get it mail order call any of these folx :

G&G Software 800-262-7462 (~$249)

J&R Music World 800-221-8180 (~$239)

The Wiz (908) 602-1950 (~$249)

Next thing to do is replace the flaky Jaguar RF modulator/cable
with the Jaguar SVIDEO/Stereo cable from Redmond Cable. Run (do
not walk) with your order to 17371-A1 NE 67th Street, Redmond,
WA 98052 (or call (206) 882-2009). Use a Sega/SNES modulator and
cable if you have to but get the Redmond cable if yu can!

Any other info about the other new consoles?

-ron

Newer versions of MiNT (i don't know which version, probably after 1.04) will also run the auto folder programs after itself, i.e. it doesn't have to be the last auto program. It also fiddles with the basepage chain so that MiNT is not visible. Thus maybe a newer version of MiNT can help you.

I'll be buying DM2 for the Atari Falcon if it comes out. I think DM
was one of the best games ever. I'm ordering Ishar and Ishar II from
Daze today, to substitute for it for Christmas.
DM2 will sell like hot cakes on all formats. I was
really annoyed when Monkey Island II wasn't released on the ST. I
bought a cheap 286 PC just so I could play it. I'll keep the PC in its
box just in case DM2 doesn't come out for the ST. No doubt it will be
486DX only, with 8 Meg ram and 90Meg HD as minimum!! Bloody IBM's!

If I'm not mistaken a new drum for the Oki 400 is almost the cost of a new printer. Call your local supplier/pc expert before you make the jump. We purchased a Canon BJ-300 2 years ago without checking first. It is one of the few bubble jet printers that has the print head seperate from the ink supply. As a result we had to install a new head at 13 months (just out of warrants) for almost $200.00. Printers such as the 200 and 10e have the head as part of the ink supply. Also if you go for the bubble jet make sure you can get paper that will work in 360x360 when using bold or desktop publishing without paying high prices.

Message-ID: <1993Nov29.140227.8104@govonca.gov.on.ca>
Source record: 197632

I'm interested in a program which would allow me to create a valid object file from any data file. As input, I would expect to specify a file name and a symbol name. The output would be a ".o" file that enabled the linker to resolve my symbol name when it was used as an extern in other modules.

If such a program already exists, I'd appreciate knowing its name and address. If the ".o" format is documented in any concise manner, that would be almost as useful. Otherwise, I'll try decoding the GCC source.

". . .and he was never heard from again. . . ." :-)

I read an article in the latest Atari ST Nieuws (Dutch) in which there
was a review of a casing for the Falcon030. It was basically just a
cover for the keyboard part on which you can place the monitor. The
diagonal slits remain visible. Price: HFl 299,- or about $156.

In the same mag, I found the lowest street price for a F030/4/84: HFl 2299,-,
or about $1200. And a set: F030, 68882, Color monitor, ScreenBlaster
and some software (Cybermorph and some other thing), for HFl 3333,-,
about $1740. It's getting more and more interesting, huh?

> DOS or Un*x without too much trouble. You could character graphics and
> line drawing symbols for the widows, the menu bar would just be text like
> a DOS app, etc. Is it possible?

Sure it's possible, but it's disgusting... Those hellspawn DOS apps that
wish they had a real GUI (ex, DOS 5's "edit" and "dosshell") are evil,
and really, really bad to use.

If you used C++ and abstracted your input/output, you could write both a
text-based TOS output class, and a GEM-based set of classes, and have
both... From your program, you'd just go:

```
output << "This is some output.\n";
```

And it'd appear in a window or plain text, depending on which output
class you'd used...

> That's what puzzled me. It said that the built-in delete function was not
> found. Come to find out, delete is really a small function that calls mfree()!
> Not exactly the most efficient way (function calling a function), especially
> since I don't think a library function can be inline, can it?

Depends... delete _has_ to call free(), since it does some work, then
frees the memory. free() calls GEMDOS's Mfree() function, so you're
actually calling at least two other functions when you delete something.
Function call overhead isn't that bad.

> I never thought of doing that. It makes sense though to get it from an
> OS/2 or Un*x section or whatever, since it should all be the same.

You're right; I spent a few minutes on Friday formatting GNU C++
documents on my OS/2 machine at work.

> ASCII docs on umich would be great (Postscript would make my FX-85 crunch
> for a few hours, and I'd have to find Ghostscript).

texinfo is ascii; if you get the texinfo documents, and GNU texinfo from
atari.arhive, you'll have nice online versions with hypertext links and
everything. Pretty slick for a text applictaion... doesn't even use
those icky text "menu" things... ;-)

> Everything. Well, the idea is that I don't know if I'm missing something or
> not!

Grab the docs from a unix or Os/2 or whatever setup, and ignore the
machine-specific stuff. The Atari port is much more like the unix
versions.

> it's own grafix calls. There is the occasional GEM dialog box here and there
> for the sysop. That's about it.

That's why I was complaining about it; it's unstuitable for running in a TOSWIN window under MiNT because of those graphics calls and the dialog boxes it pops up now and then. If it just used text i/o, it'd be no problem.

> Give us a break, you are not serious when you say that a BBS will coexsist
> with other software running on a 8 or 16mhz computer. MultiTOS will need a
> 50mhz machine to run a BBS and other software at the same time.

I never said I wanted to run MultiTOS on my ST; I want to run MiNT (but Hermes' uucico keeps annoying me). And I was originally asking about "if I had a TT, what BBS software would run under MiNT so I could have a useful computer setup with a BBS running on it".

If I had another phone line, I'd be happy to prove you wrong; why would you need a 50Mhz machine to run a BBS and other software? MiNT is much smarter than Windoze, you know. At "only" 2400 baud, an ST would do fine; MiNT adjusts process priority depending on how much i/o they're attempting.

Now, when I started compiling C++ programs on that same ST, things would slow down... that's more a side-effect of the lack of interrupt-driven disk i/o... GNU C++'s compiler is > 1M in size.

> what C lauguage
> does?? thanx.

Lattice C 5.xx support software, Line F 68882 code for 030/040 and the I/O.
68881 card for Mega ST and Mega STE.

If you have a 68882 in your Mega 2 (like me) you WILL not be able to run ANY.
Turbo/Pure C compiled programs for the I/O card...
Lattice works great even with a 882 I/O card...

That's me!

:In his description he told something about a new version which will
:support "real" window output, colours and compatibility to MTos.

:Who could give me some information about this project?
[...]

Yes, MolSys v1.00 is under development, and features all of these things, plus many other improvements, both in the interface and the molecule building side. I am currently awaiting (1) My colleague finishing the graphics library for the program and (2) HiSoft releasing Lattice C 5.6, so I can include SpeedoGDOS support. Most of the other programming is finished or can be done fairly quickly... however I have said this before, so I am not going to say when it will be available, since I have broken so many promised deadlines in the past...

The latest (released) version is v0.74, available via anon ftp at atari.archive (in /Graphics/ms074.lzh , for some reason) and also at ftp.uni-kl.de, as well as a few other German ftp sites.
This version has a few bugs, and only works in ST-high resolution.

I'll post here as soon as the new version is stable. I may have to release a cut-down version first, since I might need a few friendly falcon owners to check for compatibility.

TeX is not a word processor, it is a typesetting language. One uses a
word processor (or text editor) to create TeX source.

IMHO, they should all thank you for such good advice. Everyone ought to upgrade to TOS 2.06 with an optional switch for using TOS 1.04 if compatibility with old (more like badly written to tell the truth) software is crucial. Or is anyone still using MS-DOS 1.0 out there? Or Windoze 1.0? Didn't think so...

>I have done that with another MFM drive before and that worked pretty well.
>Do MFM drives generally work with RLL controllers, and if not, do I risk
>damaging the drive if I try that?

This is _not_ a good idea. Sometimes MFM drives work ok for RLL
controllers because some manufacturers used the same drive for both models but
one passed the quality test for RLL and the other didn't. But this is not
true. If it says MFM, then at best it has a defect or two that kept it from
being an RLL drive, at worst it just wasn't designed to handle that many
sectors/track and will give many hours of frustration and lost/corrupted data.

So if you don't particularly care about the security of the data, go
ahead - but don't make it your boot drive, and don't put anything near and dear
to your heart just incase the FAT tables are sitting on top of a trouble spot.

Hmm. Maybe he was testing it in high-color/resolution - since the
video is sharing the bus with all other memory (say, the target of a copy from
the HD port) it slows everything down. Maybe he could try it in monochrome and
as small a resolution as possible. Perhaps it would be good to have one of
those fast-ram upgrades and have the benchmark program running/allocating out
of the fast-ram - there is still some contention with video, but the memory is
filled faster.

>>I know this isn't a polite way of asking, but:

That doesn't sound right. I got 1.2MB/sec useing HDrate on my Maxtor
210MB drive. However, if I remember right, SCSI-2 allows for 10MB/s _burst_
rate, 8MB/s sustained, for normal 8-bit transfers, and 20MB/s burst for
WideSCSI-2 (16 sustained). Then again, that might be for W16SCSI-II and
Wide32SCSI-II. The question I want to know is if the Falcon supports Wide
SCSI-II (of either flavor). Durn, I wish I had the specs....

Get a HP. Why not look into a 4L or even a IIp(+)? They're very well made, consumables are very available and very cheap (I know that I can get recharged carts for my IIp for about $30 with a tradein), memory upgrades for the IIp are cheap, and they're made in the US. I've seen the 4L for under $600, and I'd even consider picking up a used IIp, which should be under $500 (I'd sell mine if I could afford a LJ4 with Postscript!). If you want to upgrade to PostScript, it's cheap and easy with a HP, also. They're great printers, they survive anything you can throw at them, and, well, they're worth the extra $$$...

Just my 2 cents...

I got the same error. I think its the compiler. The readme said that
whoever built it, never tried it out, so I think its a matter of a bad
port than the GNU original being bad, so we just need someone to
report it (not me, my hard disk is too small).

> affects the programmers of the AES.

The original 64k limit on RSC file size was due to the use of integer
offsets in the resource header. Evidently, the designers at DRI felt
that was a limit unlikely to be exceeded.

For several years now, at least one resource editor out of Germany
(Interface) has supported an extended RSC file type using long integer
offsets in the header, thus eliminating the 64k limit. Both the new AES
in MultiTOS, and Geneva directly support this larger RSC file size.

> > b) make importing of icons an easy, if not intuitive, process?

Icon Juggler, from John Eidsvoog at CodeHead makes it easy. But, of
course, it's not included with the system, so users have to go looking
for it.

> ideally, we should be able to open the Information dialog for a file,
> and drag another icon into it (and the desktop should be able to read

> there format has a large number of icons). Then again, I guess that
> would require smarter programming of the Desktop (the Info dialog would
> need to be modeless so you could get at the icons).

There are several problems with desktop icons, the first being, which
desktop are you talking about? Desktop, Newdesk, Neodesk, Teradesk,
Gemini, etc. They all deal with icons in their own way.

If you stick with the Atari-provided Newdesk, possibly the major difficulty
is that the mappings between icons and files is a simple absolute index
into the RSC file. If you remove any icons, it skews the remaining offsets.

> Its this kind of user-unfriendliness that lowers people's opinions of
> the system; it's REALLY easy for a Mac or OS/2 user to customize their
> icons...

Agreed.

> it's hard for a Windoze user to do it...

I don't buy this. I don't use a Windows system everyday, so I can't tell you the exact steps required, but I can go in and assign new icons easily, within seconds. I've done it several times. (And I don't know what I'm doing, I'm just following the dialogs.)

> it's very hard for an Atari user to do it.

This reminds me that there's a commercial CPX/DA called the NewDesk Icon Editor from SDS that does a pretty nice job not only of assigning and managing icons, but also modifying and creating new ones. I haven't used it myself (I don't run NewDesk), but have seen positive reviews. You might want to check it out.

2680. Sozobon questions

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 05:58:31 UTC
From: dwallace@wam.umd.edu
Message-ID: <2dene7$8ro@cville-srv.wam.umd.edu>
Source record: 197551

I have recently taken the plunge into learning C, mainly using the Sozobon compiler, and overall have found it to be a rewarding experience; I like the language a lot, and the compiler has by and large been pretty nice to me. However, I have encountered a couple of weirdities that perhaps some of you folks can help me with.

- My main area of puzzlement is with the floating point library; I am currently using the newer version of the lib which I got from the umich archive. Specifically, I cannot get the sqrt() function to work right - it either returns a value of 0.0000 all the time (which happens when I #include <fplib.h> at the beginning of the file, or weird, totally inaccurate numbers when I do not (although I otherwise get a clean compile). Writing a 1-line program to "printf("%f\n",sqrt(9));" gives me either a number ~ -2100, or -0.0000002. Does anyone have any ideas why this is happening?

- On a totally different tangent, I recently downloaded the program wally.c, which plays the oriental game Go. According to the author, the program was originally compiled under both SunOS and Mark Williams C. Since it had been tested on an ST, I didn't anticipate any problems with it, and while I have had some success, it always fails during the loader when I try to compile it under Sozobon. Has anyone had any success with this, or better still, does anyone know where I can get an already-compiled version of this program for the ST? (incidentally, the program compiled fine under Ultrix on my net account with no modifications...)

GCC version 2.5.5 is now available.

The file gcc-2.5.4-2.5.5.diff.gz contains the diffs from GCC 2.5.4 to
GCC 2.5.5 and is 76271 bytes long.

The file gcc-2.5.5.tar.gz is 5994481 bytes long.

These files are located in pub/gnu of prep.ai.mit.edu and the other FTP
sites listed below.

This version fixes bugs reported in GCC 2.5.4. Numerous C++ bugs were
fixed.

Unless there are serious bugs discovered in this release, we expect this
to be the last release in the 2.5.x series. GCC 2.6.0 will be the next
release and should occur sometime around the spring.

[ All versions of gcc since 2.0 also contain compilers for C++ and Objective-C.

Most GNU software is packed using the new `gzip' compression program.
Source code is available on most sites distributing GNU software.

For information on how to order GNU software on tape, floppy, or cd-rom,
check the file etc/ORDERS in the GNU Emacs distribution or in GNUinfo/ORDERS
on prep, or e-mail a request to: gnu@prep.ai.mit.edu

By ordering tapes from the FSF you help us continue to develop more free
software. Media revenues are our primary source of support. Donations to
FSF are deductible on US tax returns.
```

The above software will soon be at these ftp sites as well.
Please try them before prep.ai.mit.edu! thanx -gnu@prep.ai.mit.edu

2682. GNU 2.5.5

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 06:15:30 UTC
From: evanlang@sdf.lonestar.org
Message-ID: <CHAK1u.6nC@sdf.lonestar.org>
Source record: 197495

It seems as though there is a reason why GNU 2.5.3 doesn't work.

Its so buggy that 2 new versions have been released! 2.5.5 is now the
newest version.

If someone is willing to apply all the patches and place the binaries
on an ftp site I would be very thankful. And when I say binaries,
I mean all of it, including the Objective C compiler since 2.5.3 of
the Objective C compiler may cause problems with 2.5.5 of GNU C!
And I'd like to continue with Objective C.

I really don't see why languages such as SmallTalk and ADA are supported
and Objective C isn't. BTW, I've heard that GNU is working on an
Objective C++. Imagine Objective C as an addition to C, and C++ being
a different language. Objective C++ would be the Objevctive C interface
on top of C++ instead of being implemented on top of C.

INteresting huh? Best of both worlds? Anyway, that's all I know
about it.

I really do think Objective C is easier to learn than C++. Does the GNU
compiler support sending messages to objects of another application?
Could such a thing be implemented using MiNT messages?

Email me please. One of these days I'm gonna get C, C++, and ObjectiveC
all working at once! SO far it hasn't happened (I've got C and ObjC
working now, and before I had C and C++).

I have a Mega ST4 still governed by TOS 1.2, so if anyone has a spare TOS 1.4 chip-set lying around which they would like to see someone use, please let me know! I'd be happy to pay you for it! :)

: (How can you register, and not own it!?)

When Harman Audio took over from Evenlode as the UK distributer for Cubase they put out a series of ads asking people to re-register with THEM. Although I have a legitimate copy of Cubase, I had to re-register because I bought my copy elsewhere. However they did not question my right to register and, for all they knew, I might have been a software thief.

Having said that, I have not benefited from this registration. I still have the bug I complained about 12 months ago and little sign of any-one doing anything about it.

Isn't it possible to use one of the SCSI ID numbers and make a SCSI floppy drive ??
It should be possible to link in with other SCSI devices so you can have upto 8 external floppy drives (which might be handy :-))

Compatability is good, programs need to be updated to take advantage
of it, but that's fair enough in my opinion.

The number of drivers is too small, agreed. Read the other thread
regarding this - Atari do give developers full details on creating
drivers.

Well, Speedo isn't the MOST popular of formats, true. But it still is
a reasonably popular one, and there are several thousand fonts
available for it.

There is no need to go re-inventing the wheel! What we've got
(SpeedoGDOS) IS good, blame the fact you have to rewrite your programs
on progress.

System Solutions in the UK do falcon Wing that takes 4x4Mb SIMMS and costs about
50GBP. Silica Shop do a similar board at similar price. Then there is the Eagle
Sonic 32Mhz processor upgrade that has room for extra fast RAM on it. That costs
240GBP from Gasteiner.
System Solutions 081 693 3355
Silica Shop 081 309 1111
Gasteiner ???

This program is known as the assembler :-)

Note that the compiler only generates assembly code, which is then fed to the assembler. The ".o" format used by the GNU assembler on the atari is the a.out format, which is also used on Sun3. The easiest for you would be to just convert your data into valid assembler code, placing a label at the right point, and then feed it to the assembler.

Before posting my message I'd decided to reserve that idea for the
case where all else fails. It's main problem is that it requires not
only a program to "hexify" and label the binary file that I want to
link, but also requires that there exist a large, unnecessary
intermediate file (the ".s"). Extra file, extra processing steps,
sloppy!

If, as you say, this a.out format is the same as exists on other
machines, I'd like to repeat my request for some information on its
format.

2696. Falcon -> STE compatibility

So you are saying you have to get a pirated copy of XXXXX software to see if you like it ?????
What are magazine reviews for ???? What is c.s.atari.st partly for ????

Going back to the song analogy - What is a Radio / MTV for if not letting you listen to a song. I liked Runaway Train from Soul Asylum, on MTV so I bought it.
I liked the advert/review of Lattice C v5.52 in ST Review so I went and bought it. I didn't pirate it just for a 'taster'.

There is no excuse for piracy !!!!

From: S.J.Harrison@newcastle.ac.uk
Message-ID: <CHB9Ht.EF4@newcastle.ac.uk>
Source record: 197578

I was just having a quick look at Terradesk and seem to have found an
anoying problem when printing a file. If a serial printer is specified (via a
printer CPX), then the normal Atari desktop (TOS V1.62) prints to the serial port
but Terradesk still prints to the parallel port and I can find no way of printing
to the serial port. Maybe I am missing something.
Has anyone else had this problem?

2705. Re: How do I create a fastloading floppy?

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 15:43:58 UTC
From: mm68@unix.brighton.ac.uk
Message-ID: <1993Nov30.154358.18341@unix.brighton.ac.uk>
Source record: 197579

There are faster loading formatting programs (ie. using interleaving) and
you can set the fastload bit on machines of a certain TOS level and above.

If you do not havr the fastload bit facility, try something like the
pinhead program. This stops the system clearing alot of memory that it needn't.
Thats about all I can think of.

Source record: 197575

Well, I'm looking for alternative sources of Speedo Fonts, too.

Essentially we don't have to know how to decrypt Speedo fonts, just how to encrypt them so that they become acceptable to Speedo.

Or we should "persuade" Atari to release a Speedo that will handle both encrypted and plain fonts.

Of course, both approaches are almost as bad for the Speedo font monopoly as a decryption tool. But then, since the Public Domain market is a good one for Atari STs and an argument for buying one, Atari's decision for Speedo was a bad one in the first place.

For how long (yet!) ?

>Do MFM drives generally work with RLL controllers, and if not, do I risk
>damaging the drive if I try that?

To RLL writes twice as much data is written compared tot MFM drives.
Because only the clockrate of reading/writing data is higher, it will
probably work .... until it seems that some data is corrupted. An
RLL drive must have media which is capable of storing this amount of info.
So if you write to an MFM drive, you might suffer from (`some'?) dataloss.
If you're lucky, the MFM drive uses the same media as RLLs and you don't
have any problems, but if you are'nt (and -- some day -- you are, according
to mr Murphy) some crucial (worst case = normal than) information is
lost.... 8-( ). Because, as far as I know, MFM existed before RLL, the
media the use are likely to be not sufficient. It's a risk. (Like HD formatting
a DD flop...).

I'm doing 1000++ cps (with a 9600 modem) with CoNnect as comms prog. and
plain old MultiTOS and editing in PureC at the same time (on a TT).
This is the same problem a BBS program should have. And Mag!X is even better
and faster than MultiTOS.

CHARTER

This newsgroup will be used for discussions of realistic computer
simulations of automotive vehicles, irrespective of the platforms on
which said simulations are supported. This will include simulations
which have a competitive component (racing simulations) and those
which do not. Topics will include (but are not restricted to):

o Global characteristics of particular simulations.

o Platform-dependent characteristics of such simulations (as a
convention, it is suggested that such discussions list the
platforms in the subject header, e.g.,

Subject: [ibm-pc,sun] Blog's Yugo simulator

o Design and implementation issues of such simulations.

o Issues of realism in automotive simulation.

o General discussion of automobile simulations.

Obviously, determining whether a particular simulator is "realistic"
requires a judgement call. It is hoped that broad accord between
posters will enable the discernment of valid simulators (for
discussion in this group) from those which are devised for an
entertainment value without concern for realism. Thus, discussion of
many of the arcade racing simulators, which provide an overview

perspective of the vehicle being simulated and which do not attempt to provide realism of handling of the vehicle, would not be appropriate in this newsgroup. On the other hand, simulators such as Microprose's Formula 1 Grand Prix would fall within the purview of this group as attempts are made to capture realistic handling of the vehicle.

FAQ Outline

A preliminary FAQ is in preparation for the eventuality that the group passes the vote. The current outline is included here:

FREQUENTLY ASKED QUESTIONS for rec.autos.simulators
Written by Afzal Ballim

Version: 0.0
Last Update: 26/10/1993
If you think of questions that are appropriate for this FAQ, or would like to improve an answer, please send email to afzal@divsun.unige.ch

Topics Covered:
==========

Part 1:
[1-0] What is the purpose of this newsgroup?
[1-1] What conventions are suggested for subject headings?
[1-2] How do I decide if a simulator is "realistic"?
[1-3] Does discussion on arcade racing games belong here?

Part 2:
[2-0] What realistic racing simulators exist?
[2-1] What platforms support them?
[2-2] What add-ons, editors, updates, etc., exist for these simulators?
[2-3] Where can I find them?

Part 3:
[3-0] What realistic NON-competitive simulators exists?
[3-1] Where do I start if I want to build a simulator?
[3-2] How do I model <X> in an automotive simulator?

rec.autos.simulators group vote Final Vote Ack

2712. Re: Falcon -> STE compatibility

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 18:00:10 UTC
From: mm68@unix.brighton.ac.uk
Message-ID: <1993Nov30.180010.24584@unix.brighton.ac.uk>
Source record: 197592

```
Cannot give you any hard facts...there are several sources offreing that.
Tha Falon Owners Group for instance, but try Magi or better still Backward.

Both PD/Shareware(?) and ftp'able from a.a.u.e.

No, they said that the 386 would be upgradable to a 486 at a later date if
the user wanted. The 286 is just a 286..no upgade possible.

>It may have worked at 2400 baud, But I would love to see you get 1400 cps
>while running in the background. Besides we're talking about Rat Soft BBS.
>It can't run in MultiTOS no matter what speed your computer is.
>

I use Connect under MTOS on my Falcon. I get 1600 cps on archived files
and over 2000cps on text, that's with a V.42bis TKR 14K4.
Under normal TOS the figures are 1700cps and 3000cps.

2716. Re: A bug in NewDesk under TOS 4.04 on Falcon?

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 18:14:18 UTC
From: mm68@unix.brighton.ac.uk
Message-ID: <1993Nov30.181418.25100@unix.brighton.ac.uk>
Source record: 197594

Yeah, I'll test it for you. Or if you release it in the PD why not release the code and let someone fix it for the falcon. :)

2718. Re: New PC owner :(

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 18:35:19 UTC
From: int877w@lindblat.cc.monash.edu.au
Message-ID: <2dg3p7$4l7@harbinger.cc.monash.edu.au>
Source record: 197595

John Hoffman (jhoffman@netcom.com) wrote:
: Hello, I thought I'd pop over here and post a message about my trials and
: tribulations having bought a new PC 486/33 with windows to replace my MegaST.
: To all Atari people who might be considering buying a PC and running windows
: don't plan on doing high speed (19.2K) telecomunications. I've spent the last
: several weeks trying to get error free comunications without luck. I've use
: several of the mainstream telecom packages and they all fail. I'm also a Genie

Are you talking about Windows applications or DOS applications
under Windows? In the foreground, DOS apps and Windows apps will
get error free communications. If you want error free background
transers, you have to pay $$$ for a Windows-only telecommunications
packages like ProComm Plus, etc. There's no good shareware/freeware
Windows terminal programs, apart from Unix-Windows (which isn't
really a comms-package).

: user and the PC Aladdin program is a POOR reflection of the ST Aladdin
: application. AOL and WINCIS are also poor systems compared to ST Aladdin.
: I've just ordered a piece of software called turbocom which is supposed to
: fix all my problems. Yeh like the 16550 uart was going to fix all my problems.
: So Consider when and if you decide to move to a windows PC, Telecom on the ST is
: best!

I think you need to have a look at the commercial programs before
deciding which is best. I prefer the shareware DOS programs, but
you'd need OS/2 before DOS terminals multitask well on a 80x86
box (or use DESQview 386).

2719. RE: Falcon 3rd party memory boards

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 18:36:22 UTC
From: bill@main.morris.org
Message-ID: <1993Nov30.133627.69@main.morris.org>
Source record: 197591

In Article <1993Nov27.080756.65@main.morris.org>
I wrote:

>
>Does anyone have info on any vendors that sell Falcon memory boards? I was
>hoping for one that allows the usage of SIMMs: I have a bunch of 4mb SIMMs
>here just doing nothing, and 4mb is getting tight lately...
>
>Thanx
>

Several people sent me mail regarding various vendors, etc. A couple of
these were unfortunately in Europe, and what with me in the US, thats out...

Anyways, I called Toad today, and they have a thingie that uses regular
SIMMs, and is supposedly real easy to install: I pull out the existing
4mb board, and install this in its place, populated with 4mb SIMMs
(16mb here we come!).

Not including the cost of the SIMMs, which I got for free anyways, the
total was just under $65. And I can probably make that up selling the
old 4mb board, Ive been seeing people here who have purchased 1mb
systems...

If anyone is interested in hard-core facts about it, such as ease of
installation, quality of the construction, etc, send me mail, or
I will summarize.

(btw: apperently this is on special. Dunno for how long, but hey,
a deals a deal!)

2720. Re: Falcon -> STE compatibility

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 19:27:48 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <93334.142749STIRRE31@MAINE.MAINE.EDU>
Source record: 197597

I recently received a copy of ST Magazin from Germany.
Unfortunately, I can't read German (my friend sent me a
copy for fun). There was, however, an article about a
program that does, indeed, emulate an STe on the Falcon.
I don't have the copy on me, though. I'll try to post it
later.
-scott tirrell

2721. Re: QuickBBS ST (was: Re: BBS Software)

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 19:31:44 UTC
From: galaxis@traveller.freiburg.sub.org
Message-ID: <2cfce86c376e4@traveller.freiburg.sub.org>

>I will make it work even better under MiNT. Mind you it would ONLY work on
>a TT or Falcon.

I tried it on a 1040ST with 4MB RAM and a 25MHz 68000 Board...
If I would own a Falcon, I shurely wouldn't use it to run my BBS on :-)

>I will also make QuickBBS ST/TT/FC :-) compatible with the filelocking
>system of Multitos. In theory that would mean that network drivers that use
>the same protocol can also be used for a multiline environment.

That's very nice... I don't plan to use MultiTOS on the BBS machine; but I
currently use the PAMs Hiker network, which seems to use the same filelocking
mechanism...

>I will have a look to see if I can run it inside an own window, would be a
>bit faster then using TOSWiN, which slows things down a lot.

I would be slower on a machine without MultiTOS, though, so I don't think
this would be a very good idea...

>PS I will move from Fido/NeST more to Internet/Usenet. I personally had it
>with the Fidonet type of nets. Internet is more to my liking.

Fed up with FidoNet power games? :-)

>You can get QuickBBS ST support here too now.

Good... Your message doesn't contain a valid address, though (that's why I
don't send this via mail...).

2722. Re: Scigraph??

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 20:12:00 UTC
From: Julian_Reschke@ms.maus.de
Message-ID: <A9221@MS.maus.de>
Source record: 197475

In article <1993Nov29.165911.6629@news.unige.ch>, Mike Morris
(mike@medsun.unige.ch) wrote:
>surprisingly) is still supported? I rang the company the other day,
>and they have died... 8'(

No, they didn't. SciLab is alive, and the current version is Xact 3.x
(the program has been renamed).

2723. Re: US Falcon Prices?

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 20:43:32 UTC
From: aa399@cleveland.Freenet.Edu
Message-ID: <2dgb9k$3v9@usenet.INS.CWRU.Edu>
Source record: 197598

In a previous article, STIRRE31@MAINE.MAINE.EDU () says:

>There's been a lot of talk about plummeting Falcon prices
>in Europe, but it has not occured here in the States. Why
>have the prices dropped elsewhere and not here? Does
>anyone know if a price drop is expected here? I plan
>on buying a Falcon, but right now the price is a little
>too steep. Oh well, guess I'll just have to save.
>thanks,
>-scott tirrell
>

It could be the fact that the U.S. dollar is weak compared to other
countries enabling Atari to charge a smaller amount for the Falcon030
everywhere else.

--

2724. how to get the 8X8 TOS font?

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 22:12:16 UTC
From: jacob@max.cc.brandeis.edu
Message-ID: <1993Nov30.221216.28261@news.cs.brandeis.edu>
Source record: 197503
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I know there's a way to get the TOS font to be 8X8 instead of 8X16.
Is it a VT52-type escape sequence? Or is it some call? (I use Lattice C)

Thanks
Jacob

ps: please reply in email as I'm not able unfortunately to keep up with
these groups.

2725. Re: VME graphics cards

Newsgroup: comp.sys.atari.st
Date: 1993-11-30 22:23:02 UTC
From: dhbutler@magnus.acs.ohio-state.edu

Man! These costs are absolutely *OUTRAGEOUS*! At this rate there is no way I'll
ever upgrade beyond the ISAC card, it may only do 16 colors at 1024*768, but
then again it costs like $299! (Of course on the PC I would probably get
1024*768 25bit for that price... what a bummer!-(((((

Hi!

Hopefully, someone can help me...
I need to know about all the Falcon accelerators out there, as well as
it's price and distributor.
If you could include their specs as well, I'd be much obliged! :)
I'm thinking of getting a Falcon; however, the base is a tad too slow.. :(
I'm trying to decide whether I should go the NVDI route or just accelerate
the whole kit 'n caboodle.. SO, any help is appreciated!! :)
Oh btw, I'm assuming that all the accelerators allow SIMM memory additions,
right?

Thanks to anyone who replies! :)

>
>Craig.
>

Well..the show at Birmingham is a rather specific and small Show...we may as well help it!

add on....

All UK Users come to th Birmingham Show on the 5th of December!!!

It'll be great!

16/32 Systems (and LEXICOR), CGS, Silica, Gasteiner, Compo, Systems Solution are just a few of the many who will be there!!

add off....

Anyway...I think some of th magazines should have mentioned it...i don't know of an AD though..don't expect an AD like on TV or so *grin*. The Future SHow was properly advertised...but it was a Games Show really...

Well, I'm sure that all the other commercial developers that read this newsgroup and the Internet feeds on GEnie will be glad to know that you "really don't care." Maybe THEY won't care so much when it comes time to decide on whether they should keep supporting the Atari platform or not.

Nope, it's more like they are just covering their behinds, Wayne. :)

Personally, I'd LOVE to have a single box that would allow me to run my favorite Atari, Mac and DOS/Windows programs with no compromises in performance or any compatability. Spectre GCR and the Gemulator were steps in this direction but a far shot from the ideal. This 'Houdini' computer that Apple unveiled at COMDEX is simply a stopgap until their PowerPC introduction in March which will support DOS/Windows emulation at 486 speeds.

Sorry for the digression from Atari topics...

Trust me... developers (and anyone who must necessarily do a lot of floppy disk duplicating) really _miss_ the external floppy drive port. I'd be happy with a DSDD port on the Falcon, actually.

Format the disk 9 sectors per track, 2 sides, 80 tracks.

Make sure you are using a 'twister' or 'skew' format.

If using TOS 1.0 or 1.02 stick 'Pinhead' in the AUTO folder.

Depending on the size of the fax program, compressing it with PFX-Pack
may speed things up! (It usually does, depacking is faster than loading!)

Try to have as few files as possible on the disk, and try to have as much
as possible in the root directory so the ST doesn't have to Change
directories.....

Things won't get much faster than that......

i just sent out a new libg++/headers. it was fully tested with
gcc 2.5.5. that i also sent. please give them a try.

with gcc 2.3.3 you should have been able to use the old
library/ headers though you would not be able to build the library
itself successfully with it.

cheers,

Hello everrrrybody!

I just receive my registred copy of GemView3 (Very nice)
And so I wanna know if it exists a Graphic card -GemView Compatible-
which allows me to see 256 Color on my Atari RGB-Monitor.

I don't need any 'Truecolor' / 32k-colors card,especially for financial
reasons :-((

So...is that kind of card exists ?????

Thanx!

If you mind me asking? what is so outrageous about them? *grin* The Atari is
a small market and the prices are quite steep...compared to PC Platforms...but
then for 299 U$D you get an ISAC Board that does no more than 16Million were
for about 190 U$D more you get a NOVA True Color Board (24bit) that is far
more superior than an ISAC.

The NOVA for Lex. Users is 489 U$D...do NOT forget that the prices quited
above are German DM!!! not U$D!!

2740. ADMIN: Remove comp.binaries.atari.st and comp.sources.atari.st?

Newsgroup: comp.sys.atari.st
Date: 1993-12-01 06:27:42 UTC
From: koreth@spud.Hyperion.COM
Message-ID: <2dhdgu$4uu@spud.Hyperion.COM>
Source record: 197524
Cross-posted to: news.groups,comp.binaries.atari.st,comp.sources.atari.st,comp.sys.atari.st

About a week and a half ago, I posted an article to comp.binaries.atari.st and comp.sources.atari.st asking for volunteers to replace me as moderator. One person asked for more information, then never replied to my mail, so I can only assume he's not interested.

Which makes me wonder: is it time to kill off both groups?

Even when I have time to moderate it properly, traffic is a trickle, and the various Atari ftp sites get far more submissions than either group. With the availability of mail servers to fetch things from those sites, I'm not sure there's a reason for the groups any more. Certainly the fact that nobody else wants to moderate them is evidence that interest is fairly low.

If the groups aren't removed, I'm not going to have time to moderate them, so they will sit idle. I think it's dumb to have groups that nobody can post to. Removing them entirely seems like a far better solution.

So, I leave it to you to discuss. What should be done? Followups directed to news.groups, where this sort of thing is supposed to be talked about.

-Steve

Actually, it is possible, and even livable if you have a fast enough
modem, but in all cases you are talking big $$$ to get X-Windows working, let
alone working nicely. In some cases, you might even have to "purchase" a node
so that you can setup up a SLIP line to feed your terminal (shudder).

>: one to get to the other.
[cntl-Z and screen descriptions deleted]

Actually, you can use a program called UnixWindows (UW) which allows
you to open as many windows as your computer allows (7 on an unmodified, non
MTOS STe) - but they are still just ADM31 terminals, not X-Window terminals.
In other words, all you get are the command-line and ASCII programs - but no
graphics, and no Xclocks etc.
I have been using UW quite a bit recently for programming, and it has
been pretty stable. I just wish you could a) have VT100+ emulation, b) be
able to switch del<->backspace, c) be able to use resolutions other than
monochrome (which is required - if you don't have a mono monitor for your STe,
don't bother with UW).
That said, it has been amazingly compatible seeing as how it runs on
my TT in fastRAM on my NOVA16M in 800x600 resolution in MTOS. Now _that_ is
some well written software considering it was written in '88 or so.

>: I would also like to read "News" and sometimes download files directly

>else, Uniterm excells itself.

Any terminal program will allow you to read news with little or no problem. If you want to download, I would recommend CoNnect first because it has Zmodem built-in and can be made to automatically startup. Zmodem is good because it is not only faster (actually it is just more efficient) but it also has provisions for resuming an interrupted transfer (so you don't waste that hour of downloading just because your roomate picked up the phone at the wrong time). My second choice would be Uniterm, especially since it is FREEware, but it only has Ymodem built-in, with Zmodem accesible from an external program (just a second program that Uniterm runs when downloading). Although Uniterm is good, and fast on the ST line, it isn't as compatible in some features as CoNnect, and I find the downloading (whether Z or Ymodem) is a little slower than CoNnect's.
BTW, CoNnect has on-line help (there are very few things that are manual and not in the help). All you have to do is hit the Help button and you will get a context-sensitive help system for whatever you are doing. If you are in the dialer, the help page will automatically start in the dialing section, and so on. Of course, if you have any questions that the Help doesn't answer (or you need a "human" response), you can always ask me or Wolfgang (the author of CoNnect who usually reads this news base).

>: reccomendations for modems?
>
>Just the faster the better. 9600 baud is probably the fastest your host
>machine will be able to support.

This is not neccessarily true. My university is going to be instaling 14.4s very soon. And who knows what they do in Sweden...

Generally the faster is the better, as most modems are backward compatible, but I would also put some money into the name of the modem - if you stick with Hayes, Supra, or other comapanies that deall in good-quality hardware, you can be sure that they have good customer relations for quality control (I've ownded 3 Supra modems, and when one had a minor fault, they replaced it promptly, with new ROMs, and all with 3 days). Unfortunately customer service will vary from country to country, so companies that give me good service here in the USA, may not be so great in Germany. :)

>: Anybody using such a system as I'm describing? Any help would be greatly
>: appreciated!
>
>I'm using a system very similar to the one you're describing. Except I
>don't need to use a modem. At Bradford Uni, all the Halls of Residence

Well, as long as you are not using MTOS (or perhaps just MiNT, I am not
sure), you can use the reswitch.prg to automattically switch resolutions for
you whenenver you run Caligrapher (even from a function-key loading). All you
have to do is throw reswitch in the auto folder and edit the reswitch.inf
file.

I use AtariWorks, and it is Very solid (with a couple of bugs, such as
its logic for page-setup - the only way you can do envelopes is to set it up
for 8.5x11 with big margins and landscape, or the "feature" which retains the
page-setup from the last usage - so I had a document print out on
envolpe-sized areas of the paper. Other than that, it has worked flawlessly).
It has worked in all resolutions, with all manner of other programs running
(even the original 1stWord (not Plus) that came with my 520ST), in
single-tasking or MTOS, from STram or TTram, and it seems to actually run

faster in MTOS (especially printing).

What you want is on the way. According to n add in an ST mag this month, Titan designs who are doing a realtime color digitiser & a genlock do another product which you get free if you buy the above, that lets you have video in a window. I only scanned the add so there *may* be more to it that that.

Hello there!

Short and sweet:
I currently own an ancient (c.1985 EXTERNAL FLOPPY) 520 ST, TOS 1.4, one DS floppy.

First, I'm looking to get a Falcon 030/4-65 in the next 2 months. Anyplace I can get a good mail-order deal? Can get one for $1100+ from a local music shop, on a payment plan, but I know that's a bit steep...

Second, someone please giveme a list of *all* the Falcon's graphics modes, and whicn monitor(s) they're accessable from. Thanks!

Third... As an interim measure, I can get about 60 megs of old MFM or RLL drives from a friend for essentially free. He can also get me *IBM* type hardware (ie, p/s, case, IBM controller cards, et al). What would I need to hook these beasties up to my ST? Hardware AND software, please be specific and complete--I am a total HD novice. Software, please list items available for free via FTP or whatnot, and where. Thanks again!

Atarian to the end,

2755. Trouble with formatting megafile with new drive

Newsgroup: comp.sys.atari.st
Date: 1993-12-01 11:35:30 UTC
From: soer@els.informatik.rwth-aachen.de
Message-ID: <2dhvi2$bbt@urmel.informatik.rwth-aachen.de>
Source record: 197526

Hi,

I had a megafile 30 till now. But I got a bigger drive, a
Mitsubishi MR 535, that I installed instead. I modified the
WINCAP-file and formatted the drive using HDX 5.0 and set
that the default partition to 15-15-15-15. After Formating
HDX reported <Root sector corrupted, reformat drive!>
I ignoered this message since it appeared after each formatting
I tried. To my surprise I could access to disc and it was
formatted! Why this error message?
The second problem could be caused by the first:
AHDI 6.04 (June 93) reports ACSI-UNIT 0 as unspecified drive.
Why?
I heard about a patch area in the AHDI to specify the drive that
are present. Could a patch there speed up booting since it takes
several second recognize that there are no further drives?

Greetings Lars Soerensen

2756. Printer filtering?

Newsgroup: comp.sys.atari.st
Date: 1993-12-01 11:45:51 UTC
From: niehaus@math.uni-muenster.de
Message-ID: <2di05f$srr@obelix.uni-muenster.de>
Source record: 197528

Hallo! (Sorry for my bad English)
My problem is to find and replace ESC-sequences by an (TSR-)program, that filters the output to the printer port. Exists a PD-version, C-sources or OMIKRON-Basic sources of such programm?

If I could pipe the printer output in a file (how can I do that?) and do the replacement with "sed", I would print the file with the replaced ESC-sequences and get result too. Is that possible?

The third and for me the most difficult way to solve the above mentioned problem is use a debugger and replace the wrong ESC-sequence in the .PRG file. What kind of PD-debugger can I use to handle the problem in that way?

Thanks Bert

2757. MEDUSA (68040) System

Newsgroup: comp.sys.atari.st
Date: 1993-12-01 11:58:01 UTC

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I would like to get more information on the MEDUSA (68040 TT clone).
I have been waiting for 4 months now for a new TT and it does not appear
that Atari can deliver.

I need to know the following information :-

1) How compatible is the MEDUSA system with other Atari computers.
2) What version of TOS does is use (if any).
3) What are the available configurations / price.
4) What are the performance advantages over a TT.

If anyone has direct or indirect experience/opinions of the MEDUSA system
I would be delighted to hear from you.

Hi!

If your mailer can *only* deliver mail to hosts with directly internet-access
you will have trouble with a lot of email-addresses. Of course the domain-
part of my email-addr "rz.tu-clausthal.de" is not a host. If you are
quering a nameserver for information about this domain you will get a
MX-record (mail-exchanger) pointing to a directly accessible host
"sodom.rz.tu-clausthal.de".

This email-addr *is* working for a lot of people (beacuse i receive a lot
of email ;-)).
My check:

/home/sun/bwwl>host -t mx rz.tu-clausthal.de
rz.tu-clausthal.de MX sodom.rz.tu-clausthal.de

or

/home/sun/bwwl>nslookup
Default Server: solaris.rz.tu-clausthal.de
Address: 139.174.2.5

> set type=mx
> rz.tu-clausthal.de

```
Server: solaris.rz.tu-clausthal.de
Address: 139.174.2.5

rz.tu-clausthal.de preference = 50, mail exchanger = sodom.rz.tu-clausthal.de
sodom.rz.tu-clausthal.de internet address = 139.174.2.6

> error: unresolvable: Ley@rz.tu-clausthal.de
> <<< cut <<<

In this case you should contact your postmaster and get him to configure
his mailer correctly!

Bye,
Wolfgang.

|> new memory before switching the resolution...
This annoys me greatly. I have about 150 falcon PD files and of all the demos, 60% or more never seem to want to run. Some need RGB, some need Truecolor, some need VGA but none ever say in the readme file what is needed. Hence most of the stuff never seems towork for me. I try a few liekly res/color combinations and then give up. I haven't got time to keep messing around trying to get some demo going.

So, to all you budding Falcon game/demo/utility authors, if it needs a particular screen/res/colors combination, say so in the docs!

|> Is it worth it? Speedo GDOS just doesn't impress me from the sound of
|> it. I hear compatibility is not very good,
Eh? It works fine for me with Timeworks DTP, Wordflair & Wordup. The next version of That's Write will use Speedo. can you be more specific?

|> it does slow printer output
It's quicker! If you compare Speedo output speed against standard GDOS I think you'll find it quicker. A recent magazine article on the subject quoted print speeds from various packages and in all cases, Speedo was quicker.

|> (geez it uses BIOS character-by-character output!), and the number of
|> drivers is limited. Not to mention that Speedo isn't the most popular
|> of formats.
BIOS eh? Sorry for being OS clean. With all the various systems it is expected to run on, I'd have said making it go straight to the hardware was a hard thing to get right for all cases.
As for Speedo not being popular, I have a catalogue here of 300+ Speedo fonts. More amazingly, when I phoned the supplier to order it, they knew all about the Falcon & Speedo GDOS! They are fairly cheap too - 60 fonts in the WP 6.0 kit for 30GBP. That's a hell of a bargain to me. 40% of magazines and 70% of video output use Bitstream fonts so they are hardly a rare item.

|> If only ATARI were to spend some money on programmers to take care of this
|> kinda stuff.
In case you didn't notice, they have been lately. MTOS, the new improved AES with a decent speed are on the way along with TOS 5, Speedo, Atari Works and more have all arrived recently. I'd say Atari are improving in this area. They are a small co. with little spare cash to chuck around on anything but certainties.

That's right. I tried to run my own BBS program under MTOS, but the
computer get's so slow that you're no longer able to work on it.

Greetings, .\ndreas

From: mm68@unix.brighton.ac.uk
Message-ID: <1993Dec1.154710.14374@unix.brighton.ac.uk>
Source record: 197544

It does not show up in /dev/ram. I have checked and it is installing itself
to some degree in that I can get GEM to give me the show info on it but it will
not directory, or allow files to be moved into (and thus out) of it.

I have tried applying the 1.09 diffs to the 1.08 source, but it will not go.

I am using patch, is this right. If I patch loosely it will apply them, but
I then get hundreds of compiler errors.

Anyone want to tell me why/send me a patched source (pretty please :)).

Thanks in advance,

Pads

Oh no, it wasn't!

You can get 1000+ font from Bitstream (buy them of course).
Some years ago, when Atari decided to use the Bitstream-Format
there was no alternative around:
Adobe hadn't released the Type1 specifications
Noone had ever heard of True Type.

Bitstream fonts were used on various workstations.

Some time later Microsoft decided to define and use TrueType,
Adobe decided to release the Type1 specs, which made TrueType
redundant.

But guess who used TrueType in its GUI and guess who uses this GUI
on his/her computer because shell-commands are too awfull to type
and there was (is?) no standard way to do graphic on that computer.

Now there are million of people using this GUI, porting fonts or
even building new ones.

What do we learn from this:

Never start with something new. Someone else will copy it (modify it)
sell it a million times and you get blamed for not following the
market (not technology!) leader.

Maybe i should have a look at the Bitstream code, steal the
TrueType specification (or are they available in the public domain,
including undocumented features?) and write a TrueType to Bitstream
converter.

Source record: 197454

I have recently acquired a Mega4 STE...very nice by the way...but I have not been able to run a couple of programs. I was wondering if anyone else has had similar problems. One of the progs. is the "3D Construction Kit". I have not gotten ANYWHERE with this on the STE. The other problem is a little strange. Trying to use Cybercad 3D I found I can only get it to work in monochrome. In colour, the program starts fine, but as soon as I try viewing anything, when I get back to the main screen all the boxes and menus etc. are screwed. Has anyone else had similar probs? Any help etc. is appreciated :^)

I too bought a Laserjet 4L (in the summer) and would like to hear from anyone who has done this, or has any info about what can be done. The software I got was for the PC, and all the settings on the printer can only be done through software. Many phone calls to HP, and Atari dealers in the UK did not help.

If you require any info, I've got all the books that came with it, so please e-mail me if you require any info. Please, I need to run the printer in Econo-mode.

Thanx in advance.

Danny.

From: Lexicor@world.std.com
Message-ID: <CHDAwA.H6J@world.std.com>
Source record: 197451

Oki Doki...Ofir is right...NVDI is really very good..although Warp 9 is also good..both are screen accelerators...and both run on Falcon now.

Anyways, concerning the hardpart. From GeSOFT you can get yourself an accelerator that will turn your Falcon into an external system with FastRAM (32bit) as suppoesd to 16bit. It also features a 68030 at 32 Mhz, or was it 50?

From Richter Distributor in Germany you can get a 68030/36 Mhz accelerator that will double the speed of your System...just about. (why its 36 I do not know). Now you can of course include an FPU..but sinec FPU are very specific..it will not lend to the actual speed of the os, but of certain applications say like Phoenix Object Renderer in Phong Shading (which is real intensive).

Lastly, but not least there is an accelerator from the USA by Wizztronics that features a built in Genlock and Recording (Video) setup. It is a complete setup..so you can record realtime 16bit images. It is a 68030/50 with Fastram I think...around 800-900 U$D I believe.

There is a demo of a commercial package on atari.archive (in the Applications directory, I think) that looked pretty neat. Toad has the commercial package for sale, as do others.

>> TOS-based application. Actually, a GEM version of curses also sounds good

I don't know if its what you're looking for, but I've done some library routines that let you painlessly port a TOS app to a Gem app, at least as far as the output side goes. Lets you send strings with embedded VT52 codes to a window. It still needs a bit of work, but I've done enough to use it to convert one of my rather large applications to Gem without any trouble.

: : To all Atari people who might be considering buying a PC and running windows
: : don't plan on doing high speed (19.2K) telecomunications. I've spent the last
: : several weeks trying to get error free comunications without luck. I've use
: : several of the mainstream telecom packages and they all fail. I'm also a Genie

: Are you talking about Windows applications or DOS applications
: under Windows? In the foreground, DOS apps and Windows apps will
: get error free communications. If you want error free background
: transers, you have to pay $$$ for a Windows-only telecommunications
: packages like ProComm Plus, etc. There's no good shareware/freeware
: Windows terminal programs, apart from Unix-Windows (which isn't
: really a comms-package).

I've tested two comercial products Procom for windows and Smarterm 420 for windows. Both products will drop characters at 19.2 when in the foreground. Procomm drop characters when scrolling the screen and Smarterm 420 when doing screen esc sequence processing. In the background doing zmodem file transfers both products work pretty good. Maybe one character dropped for every 100-300Kbyte transfered.

WinQVT is a shareware product that doesn't seem to drop any characters. Unfortunately, it isn't nearly as polished as either of the commercial products I've used. I'm also having font problems with it. All-in-all a very frustrating experience.

Having use an ST forever I really didn't buy a PC to step backwards into a dos cli. I require all the software I use to run in windows. BTW I got more responses from my post over her than in the PC.comm section...

Anyway, until recently I have only looked at comercial products. Fortunately, I have access to several which are used where I work. If I was spending the $100 per pop I'd be a very pissed customer.

well I saw the game running on a PC not too long ago, and actually it is
not too bad, but apparently the game play loses its appeal after awhile.
But, then again, I still wouldn't mind seeing it anyway.. :)

I doubt there will be an ST version mainly because the actual game is
very very large and the ST would probably be too slow to handle it, but
then again, that's what they said about ultima VI..

>Thanks to anyone who replies! :)

well, not that it's slow, I've recently changed to one from an ST, so I was
very very impressed. But... if you want to get it accelerated, I've heard of
boards that allow for a new CPU (not an accellerator, a new CPU) at 33 mhz
as well as up to 128 megs of ram (I think was the figure quoted). Apparently
NVDI speeds it up to at least 200 percent (?) so that will help there.. of
course if you have the $ the only way to go is to get both.. <GRIN>

|> with th randisk. Has anyone else experienced problems with this?
|>

I'll guess you are trying to install RAMFS.XFS as a drive ICON.

Because of an error in MiNTs UNIFS code you can install the newest version of
RAMFS as a mounted filesystem but not as a drive ICON. It should not work with
either method. RAMFS.XFS is missing the MEDIACHANGE, and RWABS vector code.
Clone this code from MINIXFS and you should be in business. At least this
works on both my TT and ST.

Date: 1993-12-01 20:53:43 UTC
From: shenson@nyx10.cs.du.edu
Message-ID: <1993Dec1.205343.6940@mnemosyne.cs.du.edu>
Source record: 197462

I've heard several people speak highly of a book called "The Atari Compendium",
does anyone know a UK source, or failing that Author/Publisher/ISBN ?
What does this book cover, OS, hardware or (I hope) both. My reference
stuff is getting out of date.
PLease respond by email if possible.
Thanks, Steve.

>

I agree. The trouble is that TOS is chip based while MSDOS and the rest
are available on disk. Maybe Atari ought to consider releasing TOS
upgrades on disk.

2790. Problems with Floppy Drive on 1040STfm

Newsgroup: comp.sys.atari.st
Date: 1993-12-01 21:37:55 UTC
From: gregk@guitar.cpd.tandem.com
Message-ID: <CHDLF9.9p0@tandem.com>
Source record: 197464

Some time ago, I purchased Lemmings 2 from a local Atari dealer. It is copy protected software and did not always load. About every 5th try it loaded okay.

I took it back to the dealer, and they tried it in one of their machines - it successfully loaded every time. They said that the STs are noted for having head problems, and that I may want to buy a new drive. I wasn't too happy about this as I have no problems with any other floppies (including other copy protected floppies such as Dungeon Master). They ordered a new disc for me, tried it in their machine okay, and then replaced my original. This time it didn't load at all on my machine - no matter how many times I tried. I rang them again and they said that I should consider getting a new drive and that my current drive may damage my discs at some stage. The replacement drive is over $160 (can't remember exactly how much).

I left it at that stage - other things became more important.

Has anyone else had a similar experience? I have 90% decided that I will get a new drive, but over $160 seems a lot to me. Any suggestions?

Thanks, Greg.

```
Expanded 1040ST system with:
- 2.5M RAM (Z-ram)
- 40M Supra hard drive
- double-sided 3.5" floppy built-in
- atari color monitor
- atari mouse

Software included:
- TOS, GEM, Basic
- Marc Williams C compiler, and CSD source debugger
- AssemPro 68000 assembler
- ST-Writer, ST-Talk
- assorted public-domain software: llamatron, kermit, prolog,...

This is a great 68000-based machine, ideal for students and musicians.
It can run Mac programs with an adapter (not included).

All in original packaging with manuals and cords. Asking $500 or best
offer for the whole system. Shipping negotiable.

2794. Cubase 3 Problem

Newsgroup: comp.sys.atari.st
Date: 1993-12-01 23:09:33 UTC
From: glennd@pioneer.arc.nasa.gov
Message-ID: <1993Dec1.230933.907@news.arc.nasa.gov>
Source record: 197467

I wonder if others have experienced this same problem. I'm using Cubase 3 (on an ST), and external continuous controller messages coming in through the MIDI in port, are remapped to some other MIDI channel when they are merged with Cubase and sent to MIDI out.

e.g.: channel 1 aftertouch --> channel 2
channel 10 aftertouch --> channel 2
etc.

I've also experienced:

channel 16 controller --> channel 1

Is there something wrong with my MIDI port? I know that the ST has a special wiring scheme to enable their MIDI out be a merged port as well, but I've not had problems of this kind in the past. Is there a bug in Cubase? I looked at all the MIDI filter and setup, and input transform sections, and nothing seems out-of-the-ordinary. (I've got THRU on, and "Thru Channel OFF" disabled).

I'm grateful for any rays of illumination.

- Glenn

I heard that the NFL decided to take the Jacksonville Jaguars BECAUSE
they heard the nation was exciteed about it--especially 8-16 year olds.
They said that they want to interest kids in football and thought that
this would be one way to do it.

The NFL asked one kid what he wanted to see most next year and he said
a Jaguar! So they decided on the Jaguars! :)

From: hamo@deakin.OZ.AU
Message-ID: <2dj9vu$9om@sol.ccs.deakin.edu.au>
Source record: 197473

I'm having some problems trying to get my printer to work
properly with the print utility with the Deluxe Paint ST program.
I start printing a picture; but a third of the way through the
process the printer just stops and I get a 'printer not responding'
message. I have a 1040ST with TOS 1.02 and the printer is a
Logitec FT-5002.
Can anyone help me?

Hamo

P.S. I've tried all the printer drivers supplied with the
program and have tried contacting Electronic Arts the last couple
of years about this problem, but have had no replys to any of my
letters.

Greg> Any suggestions?

Sure... Floppy drives go bad all the time...

The GOOD news is that your ST contains a standard disk drive! Run (don't walk) to your nearest PC hardware outlet and ask for an internal, left-button (though right will work too if you don't mind cutting your case up a bit), 3.5", PC-compatible floppy drive. It shouldn't matter if it's DD or HD as long as it's double sided. Open your case, replace the existing drive with the new one (it should just be a matter of hooking up the floppy and power cables) and you're set! The drive should run you $45 or less.

Just be happy you don't have to replace the floppy on a 7 year old Mac! Those things sell for $99 and up!

From: Lexicor@world.std.com
Message-ID: <CHDyDB.5st@world.std.com>
Source record: 197478

Fact is that that your Atari RGB is not good enough for most standard Graphic Boards. Seriously though...if you have a Mega or a Mega STE i.e. TT thn the only ones available require you to use a VGA or Multisync.

If you are looking for a very cheap color solution...for a 1040 you won't get it under 500 U$D for a 1040 ST.

Or something like this...and it most likely won't run on your Atari RGB.

I know that the CHili Card runs fine...on an Atari RGB..but that is 'coz its got RGB output and it only runs for TT.

So thats a dead issue too.

There are at least two.

Go Bang - nifty freeware from the Netherlands. You can play the computer.
Seems stable.

Go Board - Freeware or shareware, not sure. You cannot play the computer.
Allows playing between two people via modem. Has strange
handicap features that pro go players would probably understand.

I assume that both of these are available from atari.archive.umich.edu. If
you can't find one, let me know and I can upload it.

>And the fact remains that this is _still_ just rationalization hogwash!

it is just rationalization hogwash for those that don't pay
for what they use.

if software was handled like other consumer products, there would be
more software tried and a lot less software sold.

I need help trying to figure out what happened to my copy of the public domain terminal program Uniterm. I keep getting a TOS error #35 and I don't know what's wrong. It was working fine until tonight. Please mail any advice or suggestions to the address below.

Thanks in advance!

-John Buell

2812. Macread uploaded to atari.archive

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 05:21:47 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <2dju1b$bt1@mailer.fsu.edu>
Source record: 197488

I just uploaded Macread to atari.archive. It should show up in /Newitems
in a few days.

Macread allows one to read HFS formatted Mac floppies, hard disks, and Syquest
cartridges while in native ST mode. It is freeware. It is a precursor to
MacSee, a commercial program with a nicer GEM interface and more features.
Note that Macread is fully functional, not a hamstrung demo.

The doc files that come with the program tell an interesting story.
Apparently, a guy paid a programmer to write the program, then gave it to
a company to market as a commercial item. The company sold the program
without his permission, and without paying him, so he released the program
to the public domain. The letter he wrote to the company is included in
the docs, and makes entertaining reading.

BTW, to whom do I email with a description of the program? Jeff Weiner?
Howard Chu?

2813. Atari Jaguar info....

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 05:41:54 UTC
From: ron@cybernet.cse.fau.edu
Message-ID: <Jo2wDc4w165w@cybernet.cse.fau.edu>
Source record: 197484

I hate to break in on the Atari ST forum, but if anyone
can refer me to the proper USENET forum for discussion of the
ATARI JAGUAR I'd appreciate it.

Just as a bit of FYI on Jaguar versus the competition....

```
-----------------------------------------------------------------
Hardware | Jag | 3DO | SNES | Genesis
-----------------------------------------------------------------
System Arch. 64-bit 32-bit 16-bit 16-bit
Rendering Speed
in millions of
pixels per sec >850 64 1 1
# colors/screen 16.8 mil 16.8 mil 256 col 64 colors
# processorts 5: 4: 2: 2:
GPU ARM60 65C816 MC68000
DSP DSP DSP Z80
Object Graphic
Blitter (^2)
MC68000
Object proc. Yes No No No
16-bit CD sound Yes Yes No No
S-video Yes Yes Yes No
RGB Yes No No No
```

This comes from a flyer they were handing out at Comdex
at the IBM OEM booth showing off the Jaguar. Please
copy and spread around as much as possible because it
looked like a VERY HOT machine.

Also if anyone knows where I can order one mail order please
send me mail. I know they are only being test marketed in
New York City and San Francisco at this point but I would
like to get one since I live in Florida. But I need to get
one from a mail order place located in one of those cities
probably....

Mail me: ron@cybernet.cse.fau.edu

Thanks!!!!!

-Ron

2814. Hard drive for old ST and compatibility

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 07:49:01 UTC
From: CXIR <CXIR@MUSICA.MCGILL.CA>
Message-ID: <02DEC93.03042503.0072@VM1.MCGILL.CA>
Source record: 197487

Hi! I am trying to keep alive a couple of old Atari STs, a 1040 and a 520, which I used to use for my work, mostly using WordPerfect 4.1 for Atari ST. Now I'm trying to keep them going for a friend. A big help would be a hard drive, now much cheaper than they were when I bought these babies back in 1986 and 1988. Can one just connect a modern IBM compatible hard drive to the 1986 vintage Atari ST? - I believe there was an adaptor necessary - are they available, and how much do they cost now? Can one upgrade an old single sided floppy drive up to the new high density drive level? Would it only be possible to control a high density drive from the newer versions of TOS?

Thanks for any help you can give,
Yours, Ian

Cool. But this is only with the extended mode of accessing the icons,
right? Or does this mean you can access more than 256 32x32 monochrome icons?

This may be true...for all TOS except MTOS, which is my preferred
environment. If CodeHead or SDS made one for MTOS and the color icons, then
more power to them - I'd probably actually plunk down the cash for something
like that. But, from what I heard at the Glendale faire, MTOS icon editors/
managers aren't likely to be out anytime soon from either company...

2816. Re: Problems with Floppy Drive on 1040STfm

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 08:29:23 UTC
From: Gordie Meyer ATARI UNITED cofounder <BIBLINSKI@delphi.com>
Message-ID: <931202.12563.BIBLINSKI@delphi.com>
Source record: 197490

$160 for a replacement drive is ridiculous. I see you work at Tandem, so I'll assume you might be able to either handle a swap-out yourself, or know someone who can. Double-sided drive mechs are going for less than $50, I think. If you look around, you might even find one that will accept the funky little parallelogram button Atari used. Be warned, however, that it might not be a simple matter of plug and play. Atari swapped some of the lines feeding the drives, so be sure you're connecting the right ones up. Including the power!

For the $160, I assume they want to sell you a complete drive mech, including case and power supply. If it's only your mech that's bad, you don't need to replace all the rest.

>So...is that kind of card exists ?????

Could go for the Spektrum 1 or Crazy Dots cards. At least the Spectrum can handle any resolution from say 320x400 up to 1152x900 in 256 colours. Of course, having an Atari monitor, you won't be able to get much further than 800x600 (possibly interlaced as well) until you buy a more decent multiscan. Tubes that can do 1024x768 at 70Hz non-interlaced should be under 2000 DM.

Actually, TrueType was designed by Apple and licensed (at least, they have an Agreement) to the dreaded Microsoft.

Many PC magazines have made the same error...

>Maybe i should have a look at the Bitstream code, steal the
>TrueType specification (or are they available in the public domain,
>including undocumented features?) and write a TrueType to Bitstream
>converter.

Well - Atari does it again.

Last week I decided it was time to buy some Falcon games - so top of the list was Jeff Minter's latest & greatest Llamazap.

So I phone up Llamasoft - the nice lady there say's

"Ahh yes - Llamazap. Jeff finished writing that 4 MONTHES AGO."
"It's being marketed by Atari - contact them."

Now then - this tied up with screen shots I'd seen with Atari Corp. on the title page.

So I phoned up Atari UK.

Me - "Hello I'd like to buy..."

Atari - "You want ours sales dept."

I get transferred.

Me - "Hello I'd like to buy Llamazap for my falcon please."

Atari - "Sorry, thats not by us. We've never heard of it. Llama-what? Jeff who?"

Click. End of phone call.

Sigh....will I ever play this game? Has anyone else persuaded Atari to sell them a copy ?

Bugger.......

In the september issue of c't (a german computer magazin) you can find the
descripton if an IDE-adapter for Atari ST. With this adapter you also can
install TOS 2.06, which is needed to boot from the harddisk. The adapter costs
45 DM (platine and GAL).
You can order it from:

eMedia GmbH
Postfach 61 01 06
30601 Hannover
BRD
Fax: 0511/ 53 52 147
Tel : 0511/53 72 95 (Time: daily 0900-1230)

Bye

Andy

Hail to you, world of the net.

I have a big problem that comes in a little question :

i want to use a bigger output-buffer (about 5kb) for the serial line on my ST, and
i want to do it with PureC 1.0 and Tos 1.04.

Is there a system call to set a new buffer ? I tried with "Iorec", but i only got
bombed.

Frank

From: lmuniz@vub.ac.be
Message-ID: <3767@rc1.vub.ac.be>
Source record: 197401

i have asked many people about programs that convert the wordperfect 5.1
and the word for windows formats to some of the atari formats (tempus word?,
calamus?, wordplus?), but noone knew of any. Is ther anyone here who knows a
pd/shareware prog for this? It seems strange to me that such a big problem
hasn't been dealt with.
I hoped to get along with the RTF format, but obviously there are MANY
RTF formats: the papyrus rtf does not work with the tempus word rtf, but the papyrus does
take the tempus rtf.
Any information about: the various rtf formats,
the wp format,
the word for windows format
would be appreciated.

i(it's not that i LIKE working on a pc, but like most of the people, i have no
sts at my working place)

Barrell is a TSR program that should be on the internet. It will allow
you to capture printer output to a file.

Codeheads Print Spooler that comes with Codehead Utilities (Commercial)
also does this.

2826. WINX 2.2 Arrows look strange---bug or feature?

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 12:36:28 UTC
From: avg@cwi.nl
Message-ID: <CHEr0t.C25@cwi.nl>
Source record: 197404

I just downloaded WINX 2.2 from uni-paderborn, and found the following:

Between the uparrow, downarrows and the slider there are small, flat
boxes. If I select an arrow, this box gets selected instead. I suspect
that the arrow button is a daughter object of the box.

Picture:

```
+-----+
| up- |
| arr |
|-----|
| | <---- curious selectable box
|-----|
|. . .|
| . . |
|+---+|
|| || <---- slider
|| ||
|+---+|
| . . |
|. . .|
|-----|
| | <---- another curious selectable box
|-----|
|down-|
| arr |
+-----+
```

Has anyone had the same problem? Until now, I used a WINX 2.0 beta.
I did change the WINX.INF file to the new format. It doesn't seem to
be a problem with other DAs.

Have you considered the HP DeskJet 500? I've had mine for a couple of
years, and have never had problems finding drivers or utilities to use
with it. The output from something like PageStream or SpeedoGDOS
(normal GDOS can use a LaserJet II driver if you can't find a DJ driver;
the same is true for any other programs) is great, and it's a reliable
printer (I've never had a problem, and I've probably printed 3000-5000
pages).

2828. FOR SALE: Atari Hardware&Software

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 13:55:41 UTC
From: (unknown)
Message-ID: <1993Dec2.135541.7717@NCRTimes.stpaul.ncr.com>
Source record: 197405
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech

For Sale:

* 1 meg, Atari 1040STe w/Rimik

* Magnavox ICM-435 14" color display w/stereo sound and tilt/swivil stand
(only 4 months old)
* Supra 45 meg Hard Drive w/DMA and SCSI thru ports

* Rimik Beatle Mouse

* Epyx 500 XJ Precision joystick

* Fitted 1040ST Dust Cover

Included & Pre-installed software (just some of the many, many titles):

* NeoDesk 3.0 w/NeoDesk CLI
* Word Writer 2.0
* Deluxe Paint ST
* Dungeon Master
* Their Finest Hourt
* Copy II ST
* DEGAS Elite
* Flash
* DB Master
* GFA BASIC 3.5e Upgrade
* Gunship
* STar Wars
* Joust
* Neochrome Master
* Arkanoid II
* Guild of Theives
* Major Motion
* A-Copy 1.2
* Tetris
* and over 100 additional games, applications, and disk utilties including some r are and
one-of-a-kind programs (never commercially released, ect)
* Atari ST Internals book
* ST Gem Programmer's Reference book

All items are in great condition.

I'm asking $675 (US funds) or best reasonable offer for the whole thing. I'll even pay
shipping (in the continental US) if I can sell it prior to Dec. 10, 1993.

This is a great system folks - reliable, cheap, and even more compatible with existing software than the Mega STe and Falcon.

Please direct all decent offers and/or inquires to me at my e-mail address:

feldak79@snyoneva.cc.oneonta.edu

Thanks,

Ari Feldman

>Please respond by email if possible.
>Thanks, Steve.
>

[Steve, I've sent you this message by e-mail but I thought I ought to post it here as well for the benefit of other Atari owners.]

I spoke to the Compendium's author, Scott Sanders, last weekend about the availability of the book in the UK. According to him, Hisoft will be distributing it in the UK.

The book is mostly a reference to the software aspects of the ST/TT/Falcon. There are some chapters on parts of the hardware but they are pretty terse. There's no way that you could learn how to program the ST from the Compendium but that wasn't what it was intended for.

I thoroughly recommend anyone doing any programming on the Atari to get a copy - it's the best one-stop guide available.

I've tried these two progs and I must say Mickey Boyd's answer about Go Bang
is not quite exact:

- Go Bang is Not a GO game, only a 5-in-a-row game also known (with somewhat
different rules) as Renju, Gomoku or Pente. It plays quite well IMHO, but this
is not GO.

- Go Board IS a Go program but it doesn't play: it only can help you in playing
with someone else, or playing games found in magazines; rules are OK, but I must
say I haven't tried the KO rules, not to mention the SEKI ones.

I know there exist at least two commercial programs that really play GO:

- GO Player, from Oxford Softworks; it can be found as part of a compilation that
also includes chess, bridge and some others... I have it.

- <another Go game> whose name I can't remember by now, but I'm sure someone from
the c.s.a.st readers will surely give it. You guess I haven't got this one...

Hope that helps.

mbaffoni@flute.aix.calpoly.edu (Juxtaposer) writes:

>b) make importing of icons an easy, if not intuitive, process?

Very good suggestion. I have been thinking of a good way to install
icons myself. Suppose I were a commercial software developer and wanted
people to use my icons with my programs. After all it is extra value for
any program if it comes with special icons.
It would be best if they included an option in the installl program to
also install the programs icons in the iconfile of
teradesk/newdesk/neodesk.

>486DX only, with 8 Meg ram and 90Meg HD as minimum!! Bloody IBM's!

As far as the beta-version goes,you'll need a 486DX/33 with 4meg and
5-10meg HD-space.This may change a bit because they're redoing the pics
from 16colors to 256colors (VGA).This should increase HD-space up to 20meg.
I hope for increasing needed HD-space they'll increase the speed too.This
version i've seen was LAME.Looked a bit like DM version 1.5 :/

>of formats.

Speedo is definately worth a lot. I can use it with any GDOS using program and it doesn't hurt any of my other non-gdos using programs. The reason it uses BIOS output (don't know if character by character) is that this allows... RIGHT compatibility. Speedo works great with GEMspooler 3.1 a harddisk spooling program, which frees up quite some time for me.

>I's like to see someone create either a new GDOS that used a more popular
>font format, or a font converter like yuo mentioned to be able to convert
>fonts from a popular format to Speedo.

No, what I would think to be even better is a solution like the one Atari found for monitors. On the Falcon one can use practically any monitor. If oly Atari put out extra modules/scalers for other font types, then it would be easy for those who needed it to buy the extra postscript scaler, truetype scaler, agfa scaler etc. etc. So users can use whatever they like and can afford.

>original case at a later date if necessary?

The case involves some case cutting, but you can have it done under
guarantee by an atari dealer, or you can order a pre-cut case so you can
always restore your Falcon (the kit is for ST and STE too) to its
original state (if you would like to type on the normal Falcon keyboard
again of course).

This little box appears between the arrows when a (global?) option is
used to join the arrow widgets together (a la NeXT). It shouldn't
appear otherwise... What TOS version are you running? Are you using
the latest GEMRAM? Are you sure it isn't a conflict (WINX and GR are
*very* fussy)

This is NOT true. When I review a program for ST Review I can write exactly what I think about it. My conclusion box or scorebox have never been 'tweeked' by my editor.

Of course as a reviwer I don't like hurting software authors, but sometimes they leave you no choice. And I get my share of complaints from software and hardware publishers who are not happy with my reviews sometimes. Some refuse to let me review more of their products. My editor insists that I write what I think about a program and trusts my judgement.

I'd like to use an Atari as a Midi Sequencer. Could you help with
these questions -

1. Is a 1040 good enough or do I need a Mega ST, or something else.

2. Which Atari will still be supported in 18 months time.

3. Is a hard disk necessary.

Thank you for any replies.

Some BBS or other, it was so long ago (early 92) I forget which one.
If you want it, I can mail it to you, or if I can find out how to upload
to an ftp site I may well do that.
BTW - to run it on a Falcon you will need Backwards v1.43. This is important
as version 2 and later do not have line-F emulation and so it crashes with
11 bombs. Same with Llamatron.

Sure, that's it. I remember I had the arrows joined before I Changed to
2.2. BTW, I use ROMRAM. What a relief. I was afraid I was just going to
have to get used to it.

Has anyone noticed the funny instructions for installing:

...
- Entferne GEMRAM usw.
...

And then the package doesn't contain a new copy! Similar instructions tell
you to remove things from the AUTO folder which are not in the distribution.
Luckily I used ROMRAM not GEMRAM so I skipped that step :-)

What about the Atari Show in the North....Haydock park near Manchester on Dec 12. Anyone going there?

I am going to go, but haven't yet bought my ticket. Also, i will not be able to go near the beginning of the show :-(only being able to make it there about 4 pm. Hopefully, not everything will be finished by then. Are there usually any special offers at these shows? I'm interested in Accelerators (which I've heard are quite rare at the mo for the STe) and a STe Tower Case.

Hopefully, the Tower will be selling at half price (I know wishfull thinking)

Danny.

There is a PD/shareware program called 'The Ancient Art of Ascii' which I saw reviewed in the PD section of one of the UK glossy magazines. I can't remember where from though.

If you are really bothered, repost, and I'll look it up for you.

Steve Taylor.

2854. FOR SALE: Atari ST computer

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 17:52:15 UTC
From: cfuhrman@csugrad.cs.vt.edu
Message-ID: <2dla0f$a97@csugrad.cs.vt.edu>
Source record: 197427

For Sale:

Atari 520STfm Computer
Motorola 68000 (8Mhz) CPU
512K Memory
3.5" 720K Floppy Drive
Atari 1224sc Color Monitor (I think that's what it's called...)
Atari Mouse.

Some (but not much) software:
PC Ditto (the software version, not the add-on card)
STWriter (July, '86)
MicroEmacs
German Tutoring program
Checkmate Chess program.
vt52 emulator.
Ultima 5 (Game)
Monopoly (Game. Can only play against computer, not other players.)
Pile Up (Tetris clone)
plus some other games I can't think of right now...

Asking $250 obo.

SPECIAL NOTE:

I don't have the computer physically here at Virginia Tech. It's
at home in Woodbridge, Va. I'll be going home to Woodbridge on the 15th
of December, so I can arrange for anyone to look at the computer then.
If you're interested, please respond by e-mail before the 14th as I do not
have net access at home. I'd prefer if the buyer were in the Washington
D.C. area as I'd rather not have to go through the hassle of shipping the
computer.

: huge numbers of icon resource files to Michigan and John
: Eidsvoog's ICONJUGL program that allows people to use them, but
: I can't draw or convert my own. I'd like to. Am I missing

Again, the program you need to create your own icons is MAKEICON, which I have seen many times on FTP sites. Or a Resource Construction Set such as ORCS (Otto's). will do mono icons such as those you use on your MegeSTE.

But at the moment, a commercial package, Interface or Zoom is needed to edit colour icons from TOS 3.x and 4.x.

[List of features]

Well, that is an impressive list of features, but one thing that is
missing is; what are the different screen resolutions?
Somehow it always seems like the marketing deptartments leave these things out.
It is very irritating and sometimes it is almost like it is a secret.
What good is a gazillion colours if you only got 32x32 (well I suppose
they got more than that)? Yeah, I know there is quite a difference between
320x200 in 16 and 320x200 in 16 million colours.
My point is why do they keep the resolution to themselves?
I mean it is not like it should be a big deal? The TV resolution limits
the maximum resolution.

Another thing that Go fans might enjoy is a service on the net called IGS - the Internet Go Server. There is a fully graphic mouse-driven client for the ST that lets you telnet to this server and play Go realtime against other people all over the world. I forget the address of the ftp where you can get the client, but you can obtain the rec.games.go faq via ftp from rtfm.mit.edu, or by reading the rec.games.go newsgroup for a while; this lists the locale of the archive site, as well as the addresses to get to the server. Overall, it's very neat, and have only had two problems with it. The first is that I find I need to manually telnet to the go server BEFORE running the ST-end client; the docs say otherwise, but it bombs on me if I don't log onto the server first. The other problem is that I can hardly ever find someone as new to the game as I am, so I always get beaten! :-)

2862. Supra SCSI -> ST-DMA problems...

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 18:31:15 UTC
From: fdomingu@rainbow.UWaterloo.ca
Message-ID: <CHF7G4.D1M@watserv1.uwaterloo.ca>
Source record: 197351
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm currently tyring to install a Supra Corp DMA - SCSI controller for a friend in combination with an Imprimis (180meg) SCSI drive with not much luck. I have disconnected the controller from the Supra Box and applied the +5V to the board then connected it to the drive and computer. When the controller is off (ie no power and not connected to the SCSI port of the Hard Drive), the drive will spin when powered up, however, when I power back up another time with the controller hooked up to the drive, it will not spin up (the drive light does turn on).
In all cases, that the Supra controller is powered, the Green LED does light up.

The whole board is composed of pretty basic TTL, but, I have noticed that 3 traces have been cut intentionally and rewired on the circuit side of the board.

On the bottom it says....
SUPRA CORP
(c) 1987
30-0014-5

If anyone has had any problems or can give any suggestions as to what I might be able to do or try please email and I can create a summary.

Francisco Dominguez

M A Rahin (rahin@scs.leeds.ac.uk) wrote:

: Could someone please describe the med-res (or is it low-res ?) boot problem
: on the STe and its remedy ?

Certain STE's (I think it's TOS 1.6) do not boot in medium res in the
usual fashion. There is a number, at the end of a line in the DESKTOP.INF
file which is 1 for Low, 2 for Medium, 3 for High.

Assuming you are not using a Hi-res monitor or emulator, the STE will boot
in Lo-res if this number is 1 or 2, and Med-res if this number is 3
(because it cannot do hi-res).

Therefore, You can either...

1) Use a PD autoboot program which fixes the fault
2) Edit your DESKTOP.INF file, turning the 2 into a 3
3) Write your own Boot program which looks at the digit in the DESKTOP.INF
file, and if it is a 2, turns it into a 3.

>Is there any to use a standard 9600fax/2400 data modem??
>I would prefer it to be Pubic Domain or Shareware.
>and where would I get it?

Hmm, I've been looking into FAX software as well. So far I have at least noticed/heard mention of:

Straight Fax 2.0 : commercial : send/receive fax, etc
Coma : shareware : (send version "crippled" for demo), not familiar with it's features
{future?} CoNnect term program (I believe fax is to be/or is supported, but since the latest version I've found is only in german (where's the english RSC file? :-) I'm not sure of it's particular fax options...

I've heard relatively good things about Straight Fax, so if you have around $80-90U.S. you might check it out...

Rob

...just for your curiousity, there is a program called "Modem Tester" from Toad Computers (it's shareware or PD, I forget) that will "test" your modem and determine some various fax-specific things about it (is it class 1 or 2, buffer size, etc) - at least one version is available at atari.archive.umich.edu (I think there's a newer version out, however)...

Listening to mag' reviews as an excuse to buy things is not a good idea.

Some mag's have given a program 85% whilst others have given it 60%,
it's better to try before you buy! If you copy something for the sole
intention of 'trying' it and killing it if you aren't going to buy it,
I don't see anything wrong with that! Everyone gets what they should
get in the end!

>>And so I wanna know if it exists a Graphic card -GemView Compatible-
>>which allows me to see 256 Color on my Atari RGB-Monitor.
==========

Atari RGB Monitor are you most
likely meaning the SCC1224 Monitor?

Hi Annius!

I don't think he meant the PTC1426, which is probably the Monitor you are
thinking of. Also what is needed to know is whether this is for an ST or
a Mega or a TT.

The PTC1426 Atari Monitor is sort'a old VGA and can only handle 800x600
Interlaced. Both the SPektrum and the Crazy Dots will not work on a SCC1224.

It would help if we knew for what Computer System (ST or Mega or VME TT, MEGA)
it was.

>Could go for the Spektrum 1 or Crazy Dots cards. At least the Spectrum can
>handle any resolution from say 320x400 up to 1152x900 in 256 colours. Of
>course, having an Atari monitor, you won't be able to get much further than
>800x600 (possibly interlaced as well) until you buy a more decent multiscan.
>Tubes that can do 1024x768 at 70Hz non-interlaced should be under 2000 DM.

Don't forget the Matrix Boards and the NOVA Boards *smirk* also in th USA
Monitors that can do 1024x768 non-interlaced go lot cheaper than
2000 DM....besides....that isn't quite what is a cheap alternative *smile*

Cheers

Atari dealers still advertise the Portfolio. I think it
failed because it couldn't compete with other similar
devices made by better-known companies such as Sharp.
I don't remember Atari's address right now, but their
phone # is (408) 745-2000.

My children have been using a 520STfm system for a few years now but are outgrowing the preschooler-level software (one is 6, the other 8). With the rather awful SW situation in the US, there are simply no educational titles to buy, period. The only educational titles I know of from Europe are the "Fun School" series from the UK. I have two of these, and while they are OK, I'm looking for other titles.

I'd like to hear about titles that any of you are familiar with that are suitable for 6-12 year olds and are in *English*. Also, if anyone knows any US sources for these.

Otherwise, it's off to shop for a Mac for the kids to use 8^(

Max res on the Jaguar is 768 x 480 x 32 (24) bit. There is some
rumor that it might be difficult to animate at this rez due to bus
contention, and most screenshots are at about 320 x 240 x 24bit, though
I have seen some higher. All Jag games seem to be 24 bit as well, I haven't
heard about anyone using less than that in a game. Read Rec.Games.Video.Misc
for more info.

Well, I think it is waiting on the commercial sale of the new Joypads
(same as Jaguar pads) The developer docs say to support only those and not the
old style joysticks in games, and they aren't avauilable yet, so there is
an understandable shortage of new Falcon games... Oh well...

The demo version I played last year used the new Joypad.

In 2nd last AEO it was mentioned that their was a new pd/s fax program
out there somewhere. It might be on a.a.u.e. I remember seeing a
description of the program that said it would only allow you to see only
so many lines of a fax. So it's crippleware. But, it was by an english
author and that's something new.

Well, Ive had my Jag for about 10 minutes now, but I thought I would post to the net and gloat about it first :-)

Anyways, I got the *last* one at an EB near me...

But, for the 5 minutes I played the game (cybermorph?), its pretty cool, altho games like these, flight simulations, get me totally disoriented. So far so cool, tho!

I do wanna say, I *HOPE!!* Atari doesnt put this to the undeserved death that the Lynx seems to have gotten.

Well, Im sure your all gonna run out and buy one now, and I am sure that others have posted Jag stuff (my news system is hosed: its about three days behind in batches...), so now I think its time to read the manual...

2886. Bombs & such on an inherited 520ST

Newsgroup: comp.sys.atari.st
Date: 1993-12-02 23:16:07 UTC
From: John VanDyk <jvandyk@iastate.edu>
Message-ID: <CHFKMv.BML@news.iastate.edu>
Source record: 197365

A friend of mine just inherited an Atari 520ST, 2 floppy drives and a small monitor.

We hooked it up and turned it on, holding our collective breaths...and Drive A came on, then after about 10 seconds a row of bombs appeared on the screen.

We opened it up. It's a Revision B motherboard and it has a 2.5 meg Z-RAM upgrade installed. Upon further trials, sometimes, after Drive A has spun for about 40 seconds, the desktop came up, but bombed when we put a TOS disk in the drive and clicked on the drive.

Any help from anyone is appreciated. Is this thing shot?

Is it normal for the drive to spin when you turn on the computer? The manual seemed to think we would get some sort of "hello" screen.

Help!

Many many moons ago I switched my old Mega 4 from a 2-chip set of TOS 1.02 to a six chip set of TOS 1.04. I followed the instructions according to Atari, required the removal of the 74LS11 chip, changing the position of w-2 or w-3 on the board, and running a jumper across w-4. recently Ive been having problems with a video-card conflict, and the only thing I can find wrong is that the diagram on the circuit board makes it look as if the jumper specified by Atari should have been a resistor of some type (the design running between the front and rear of W-4 is the same as the design where resistors are installed elsewhere on the board). Im not a electronics genius (I can solder, install accelerator boards and such, but I have to have *instructions*), so Ive got no idea how to figure out exactly what sort of resistor, if any, should be put here. Anyone want to lend me some helpful advice?

Thanks!

|> then why can't I return a package after I use it and judge it unacceptable.
|> no-returns is just another form of piracy.

I tend to agree; selling buggy software with no refund is piracy by the software companies, and I am certainly a victim. MetaComco and MichTron come to mind; Lattice C version 3 and Fleet Street Publisher were pure crapola, but that's old news. Now, I don't condone or practice piracy, but I do think that "try before buy" is a reasonable idea, and not just some b*llsh*t demo version. Reviews are helpful, but 'Fleet Street' got some good reviews, and all I got was a program that crashed more than Launchpad McQuack (very bad pilot; Disney character).

So basically, I don't think software developers have any more right to the moral high ground on the issue of piracy than do potential customers; if the the software is high quality, and reasonably priced, I might buy it. I wish developers would pursue program bugs with the same relentlessness they seem to lavish on guarding against piracy; perhaps I wouldn't feel so victimized by the piracy of software companies themselves.

Couldn't you just hold the image of the disk to duplicate in memory, then
dump out multiple copies? I don't see how 2 drives helps - unless you have
some neat program to write multiple disks at once - and in that case, why
stop at 2 - you could set up multiple SCSI floppy drives.

I have a ST-Low port of GNU Go. But GNU Go is quite weak apparently.
I'm looking at porting Amigo (an Amiga Go program which has also been
ported to X11) to use GEM (using GEM++).

BTW, GNUChess GEM port is done - I'm just waiting to see if a GCC 2.5.x
compiler will appear that will compile properly for the 68000 (rather than
just 68030). If not, I'll switch back to 2.4.5 and distribute it.
Unfortunately, GEM GNU Chess will have a LOT of trouble fitting into a
512K machine (370K free), as the 100K or so extra for the GUI combined
with the tables GNU Chess needs pushes it over the edge.

If you want specific sizes of GEM GNUChess, let me know, I'm thinking
of doing binaries for:

1M 68000
2M 68000
2M 68030
4M 68030
8M 68030 (this is maximal, I think)

Of course, source will be available, so you could build any size you want.

>320x200 in 16 and 320x200 in 16 million colours.
>My point is why do they keep the resolution to themselves?

The reason there are no screen resolutions listed for the Jaguar is that it's programmable. That's right, kids -- you want 320 x 200? Got it. You want 720 x 580? No problem. You want 16 x 16 (for whatever silly reason you insist on)? Bingo.

Rob Nicholson of Handmade Software says that the stock Jaguar can go up to 800 columns as-is, and even higher if additional hardware is added. Instant adaptability to HDTV, yes?

|> Chris Herborth

I'll second that; the HP DeskJet is very nice, very cheap these days,
and they switched ink formulations to get rid of the "don't get it wet"
problem (smeared easily if you got it wet after the ink had dryed). With
Tim Gallivan's excellent 'ghostscript' port, you can even print PostScript
files on it with ease, and there are several other nice utilities on
atari.archive.umich.edu like HP_R_SAVE (prints small but crisp screen dumps).
You can even buy ink cartridges in other colors besides black!

The Falcon Joystick ports are the same as the unused Enhanced STE joystick
ports. Basically, analog Joysticks and 4 controllers or so can be plugged
in. I don't know the exact specs, but the Jaguar controller looks like a chubby
lynx without a screen. Joypad on the left, three buttons on the right, and
a 12 key keypad in the center.

From: bhawker@midi.ham.almanac.bc.ca
Message-ID: <H.eg.Of3yAkkqfAc@midi.ham.almanac.bc.ca>
Source record: 197400

I have been negotiating with an Internet server in my city for a UUCP feed directly to my home. I am trying out Hermes at the moment. The sysop would prefer to give me dialup SLIP access provided that Hermes can handle a TCP/IP stack.

Does anyone know if this is possible with Hermes? What would have to be set or changed within Hermes to make this work? Pardon my ignorance if this is the normal method of interchanging packets between UUCP sites, but if not, I'd like an explanation of the difference if anyone knows.

You may reply via email if this is of no interest to the net. Thanks for the help!

Hi. I am selling a pile of Atari software. All this stuff comes on the original disks and is supplied with the original manuals, unless otherwise noted. If you want a package of stuff from list, we can work out a deal. Minimum order will be $15US (+$3 shipping). Here goes:

Minix 1.5 (10 disks and bindered manual) $40
Tempus II (text editor) $10
MiTerm (terminal program) $5
K-Roget (awesome .acc thesaurus) $20
Alice Pascal $10
VIP Pro (good spreadsheet) $10
Masterplan (spreadsheet) $10
Mark Williams C w/csd (standard lang) $35
Super Librarian (MIDI sound librarian) $35
Calamus 1.09N w/font editor (the best dtp package) $100
Word Writer ST (standard word proc) $15

Macro Desk $10 General Store $5
NEOchrome $5 Equation Builder $5
Why Wait $5
DATAretrieve $5 Magical Anagrams $5
Flash 1.6 + Kermit .acc $15 Magical Math II $5
Planetarium $5 Magical Math III $5

Tetris (disk only) $5 Silent Service $5
Wayne Gretzky Hockey $10 LCS Wanderer $5
Motor Massacre $5
Team Yankee $10

Crystal Desk Acc. $5
Hyperpaint 2.0 $20 Boulder Dash Cons. Kit $5
Learning C on the ST (book) $5

EasyDraw $40
Spectrum 512 $5 MacroManager $5
dbMan $25 Wholly Macro! $5
Barbarian $10
Star Raiders $5 Gone Fishn' $15

Hm. Joining the arrows or having them 'getrennt' doesn't seem to make
a difference anyway. Except that there is only one `curious box' if
they are joined (i.e., right between the two arrows).

Does anyone know where I can get an *old* version (i.e. 2.0) of WINX?
I threw the old binary away... :-)

2908. Z80 simulator for ST?

Newsgroup: comp.sys.atari.st
Date: 1993-12-03 10:21:46 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <754914106.16365@minster.york.ac.uk>
Source record: 197165

I have heard that there are many cross assemblers available for the ST to assemble Z80 code. Is there a Z80 simulator anywhere. Not just an emulator, but a program that shows the status of the chip, etc (it does not have to run real-time). Also, will this program simulate other devices in the Z80 family (eg the PIO)?
I am currently working on building a Z80 based computer, and during my holliday, I will not have access to it, but I can use my 1040STE. If no such program exists, could someone tell me how to use the ZX81 or ZX Sprctrum emulators to just simulate a Z80.

Thanks in advance.

AE.

>No, they said that the 386 would be upgradable to a 486 at a later date if
>the user wanted. The 286 is just a 286..no upgade possible.
>

Is the 386 emmulator available yet and what is the foreseen compatiblity
with a run-of-the-mill 386PC? Will it emulate an SVGA card
and some kind of sound card (Adlib/SoundBlaster)? What about using CDROM's?

I currently have access to PC computers but I dread buying one for myself.
Having a dual purpose machine like a Falcon/386 is much nicer since I don't
have to upset myself with IBM architectures when programming and yet
I can run PC software that people want me to try out, in terms of usability.

-Andrew

>(because it cannot do hi-res).
>

Thanks for the explanation. My problem however, is slightly different.
I needed to boot in low-res, prepared and saved the appropriate desktop.
But, when I boot, the machine boots in med-res, with same pixel
sized windows as for the low-res and the disk & trashcan icons placed at the
same pixel position as that in the low-res. The windows and icons in this
med-res desktop are effectively placed on the left hand side of the screen.
I'll check the desktop.inf file and see waht I can do.

While I'm at it, does anyone know why Getrez() function returns 0 for
both monochrome and colour monitors on a STE ? The same function used to
return different values for mono and colour monitors for the STFM (TOS 1.0)
I used to have. I am using HSC latest version available at atari.archive.

From: lpzssm@unicorn.nott.ac.uk
Message-ID: <2dn8da$arq@unicorn.ccc.nottingham.ac.uk>
Source record: 197386

A Few Questions about Microprose's "Civilization" :

1) Has anyone tried packing some of the files ? On a floppy system it seems that getting disks A&B together would be a real help, but its a lot of files so I'd like to know if anyone else has found a packer that works first.

2) I only seem to be able to get drive B recognized for game saves, is there a way to get B used for Civ files too ?

3) A while back there were some bug reports floating around which (inevitably) I didn't attend to much as I didn't have the game then. Can anyone tell me what they were and possible fixes ?

4) The manual is very confusing about making specialists - it tells how to make an entertainer into a taxman, but nothing seems to make an entertainer. Hints anyone ?

Thanks for any help.

Sam

2915. MEGA ST Upgrade problems..

MEGA ST2 UPGRADE PROBLEMS....

Well I managed to get a cheap MEGA ST2, I like the case style..

Have been using a 1040STFM with 2.5 megs and TOS 1.4, with a external
240 meg Quantum, near new....

I have not had any problem with this system at all...

I have just fitted TOS 1.4, AdSpeed, ICD Micro Host and Auto Overscan to
the Mega...

Now the problems start...

The main one at the moment is that Neodesk will crash, even with Overscan
disabled, and Adspeed set for 8 mhz by software..

I can fix it with a new copy of the Neodesk RSC file for the res, that I
am using, but after I turn the computer off and restart again, it will
crash at the end of the loading of the EXE file...?? Buss or Address error...

None of these Neodesk files are writen to, so what is going wrong..??

The Hard disks worked 100% on the 1040STFM and no errors are found with
CleanUp...

I will leave the other many problems to later...

What is the latest version of Auto Overscan...?? mine is 3.0zh...

Thanks.....

Roger..... sheppard_r@kosmos.wcc.govt.nz

Jumpers are correct. No resistors instead. I've done the same thing
without having instructions of atari, but I've found the same things
to change by looking at the board and figuring out how the circuit
works. I've described the whole thing in the German magazine ST-Computer
published by MAXON, edition January 1990 (or was 1991?).

I installed orcs with the .rsc filetype under Teradesk. Now all I have
to do to make/modify icons in any program is to double click on its rsc
file.

>This is assuming TeraDesk uses the 'standard' icon Resource file format.

Almost. Standard icons will work, but also extra wide icons will work.
Iconjuggler will choke on these bigger icons. So take care and make
backups before you start modifying the teradesk icons file with
iconjuggler.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

A while back, when someone was trying to sell a Mega STe they posted a "features list" which I know was a bit flawed, but they stated that the LAN socket on a Mega STe was "LocalTalk" compatible. Does this mean that this port can be used to network a Mega with Macs/Newtons ? or am I missing the point ?

Also, if this networking is possible, is there any software support for this, or information about what would be required to make this work ?

As I use Heat 'n Serve C (a friendlier sort of Sozobon) quite often I think I can answer your questions.

*NOTE: to subcribers to the HsC mailinglist. The mailinglist is malfunctioning for unknown reasons. I hope I can find an error somewhere, but so far everything looks okay, but does not work.

The most important thing to remember when compiling a program using floating points is to give the cc program the -f flag. On other C compilers this is a -lm flag, but Sozobon expects -f for floating point using programs. This will link in the float library functions.

> version of this program for the ST? (incidentally, the program compiled
> fine under Ultrix on my net account with no modifications...)

Well there shouldn't be many difficulties, but I assume the loader/linker ocmplains about undefined symbols. Using the mintlibs for Sozobon will solve the problem I think, or you must find out what functions are undefined and use replacements for them. More specific information on the problems would be very helpful in finding a solution.

2922. 16-bit text with Speedo problem

Newsgroup: comp.sys.atari.st
Date: 1993-12-03 12:17:34 UTC
From: C.J.Ridd@cs.bham.ac.uk
Message-ID: <CHGKtB.HD1@cs.bham.ac.uk>
Source record: 197392

Lattice 5.6 comes with complete bindings for Speedo (which are also documented in the Compendium naturally). But the explanations of how to write 16-bit wide text strings totally mystifies me!

Speedo fonts have lots of different encoding schemes: the default on is Atari ASCII, whic is 8-bit. Other encodings use the Bitstream character set, which is 16-bit.

Has anyone been able to build a BICS string (and write it!) containing spaces (which are encoded as 0, just to be difficult)?

Any suggestions welcome... I'm disassembling the VDI bindings at the moment to figure out what's going on :-(

Do you mean you want a utility to take any file, and convert it into
something that will let you include it in a C program as data?

I've got a dinky program here that I wrote that converts a binary file
into C; thus, it will work with any C compiler.

If this is what you're after, let me know; I'll try to dig up the
source.

Though they've probably thought of it already, here's an idea for Falcon developers in this situation: store the pictures (backgrounds?) as Jpegs, and just have the DSP decompress them almost realtime. If ya got the hardware, take advantage of it. (even a 486/33 could do this in reasonable speed). This would save a tremendous amount of disk space (not as fast as a simple bitmap, but with the DSP, it shouldn't be a problem)...

I have the following for sale:

Original Atari ST520 with 512k RAM
Atari SF 354 Single Sided floppy drive
Future Systems GTS 100 Double Sided floppy drive
Atari SC 1224 Color monitor

All equipment is in good condition.

I don't have much software, but here's the list:
Timeworks PartnerST
Timeworks WordWriterST
Timeworks SuperCalcST
SimCity
PacMania
Accolade Hardball
Accolade Mean18
StarTrek - The Rebel Universe
Dr.T KCS 1.5
Dr.T Copyist
a couple of ComputeST magazine floppies
a couple of other games (I forget what)

I'm asking $300 for the lot, but will negotiate. You pay shipping. If
you are a church, non-profit org or Michigan school, I am willing to
donate the system in exchange for a tax deduction.

Don't know about you guys, but I think that my Quantum LPS 240-S connected to my STe is fast.

OK, it's not as fast as a SCSI 2 is supposed to be ie 10 Mb/s (The LPS is a SCSI2 mech), but it's a whole lot faster than what I had for a while.

The Seagate ST157N I had, I do not know about, but I had an old Quantum Prodrive for a couple of weeks, and Rate HD from ICD gave me a transfer rate of 655 k/s....29 ms

The LPS gives me 1418 k/s....18 ms... more than twice as fast.

Someone also mentioned about ICD's Rate HD not giving correct results. What program can I use then?

Also, a rumour I heard....please don't hold me to it...but are ICD still in business? ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

Danny.

I won't get into arguing about RATSoft, but facts are facts! The Rats Nest did in fact have scads of pirated software during the IAAD research. Proven fact. I suggest you go find another 'cause' to support as this is a dead issue.

And if you are going to claim the IAAD report contained errors or misinformation of any kind, please be much more specific about your accusations. A LOT of very hard work, time and expense went into the research and writing of that report for the specific purpose of educating the public. The ONLY people that have come out against it so far are the avowed pirates who were caught in the act.

Are IAAD members (or any software developer) somewhat biased concerning piracy?

YOU DARN WELL BET THEY ARE!

What???

GSZRZ works with *any* terminal that can call external transfer protocols.
It can run as a program or a desk acc. The latter requires special
support, the former *doesn't*. It takes fairly standard parameters and is
very reliable - hasn't crashed once! The manual is a long readme which
lists all the various options. It's fast and MTOS compatible. It also has
a nice facility to disable mouse interupts during transfer under single
TOS which helps on 8MHz STs. Worth every pfening (or whatever the Germans
call their cents).

2946. Encrypt *.PRG to Xchange data with DOS?

Newsgroup: comp.sys.atari.st
Date: 1993-12-03 19:47:18 UTC
From: UPS500@ibm.rhrz.uni-bonn.de
Message-ID: <16C991168CS85.UPS500@ibm.rhrz.uni-bonn.de>
Source record: 197311

Hallo everyone!

Could you name me programs which allow the exchange of encrypted
data between TOS and DOS-machines? I would use the PRG for an Atari
1040 STF.

Please name me the Atari *.PRG, its MSDOS counterpart AND possibly
where I could ftp the stuff.

Please e-mail me at markus@uni-bonn.de

Thanx,
Markus

2947. Top 10 Atari Games of 1993...

Newsgroup: comp.sys.atari.st
Date: 1993-12-03 19:52:58 UTC
From: dackerma@magnus.acs.ohio-state.edu
Message-ID: <2do5eq$oh9@charm.magnus.acs.ohio-state.edu>
Source record: 197319

Hello, I am going to attempt to compile a list of the top 10 programs in several categories for the Atari in 1993. The compilation will last throughout December and be posted in January of 1994.

The categories I am looking at at the moment are:

Game
Application
Utility
Demo

I really only want to consider PD/Shareware titles in this list. Make it kind of a peoples choice award for Authors.

So what do I need from you? Nominations. If you have a favorite game, utility, etc. that came out in 1993 send me the following:

Category
Name of the program
Shareware/PD status and registration cost
Name of Author

Feel free to vote in any of the categories, but please only vote once per category.

So please send your vote or suggestions to :

ackerman.29@osu.edu

Thanks for your time,

Dan Ackerman

don't want my mailer to get killed.

>THeo

I'm running Laser C with TOS 1.4. I'll check when I get home. I went from 1.0 to 1.4, but after that I think is when I got the later version of Laser C with the debugger.

The last I talked to Megamax they had changed their name so I don't even know if they are still around at all. This was a year or two ago.

2949. Supra + megafile 20

Newsgroup: comp.sys.atari.st
Date: 1993-12-03 22:48:16 UTC
From: lai@paf
Message-ID: <2dofng$8qi@skates.gsfc.nasa.gov>
Source record: 197322

I just got a bunch of Atari from another department that is switching to SGI. I have a Mega ST4, Supra Drive (20Mb), Megafile 20, SLM804, Spectre 3.0. I got these because I have a 1040ST (1986) at home and thought that these are still use ful. Since I have a ICD harddrive, I don't know much about these HD. I have been using Linux and OS/2 lately so I haven't worked on ST lately. My question are, how do you get the Supra and Megafile working. I tried changing the ID on the Supra from 3 to 4 but I can not get the Mega ST to see both of them. The SLM804 works well with the Supra but it doesn't seem to want to work from Neodesk print ques. How do you work it in Mac mode. Where can I get the SLM804 for the System folder. I think everthing is running under TOS 1.2 but I am not sure. It has been a while since I went beyond Uniterm on my home Atari.

Thank for any help or comment in advance

Keith Lai

If you ask me nicely I'll send you the bindings (actually you don't need
to ask that nicely!).

AFAICR the binding just points the intin point in the control array to the
string that you pass.

If they can manage more than 160x120@25fps at under UKP200 I shall happily
eat my eat my hat... TC video in a window is a major bandwidth headache when
you don't have a video card 'feature connector'.

I have a design on the table which can do this resolution direct to hard
disk, but pulls every stunt I know to improve bandwidth & even then probably
won't work on a basic Falcon030 (subject to the price contraint).

>titles under development for the Lynx scheduled to arrive in '94.

I dunno, I don't trust ST Informer's video-gaming coverage too much. I'm already annoyed that their game reviews are very dated and they often lift files and articles directly from electronic networks. I mean, heck, AtariUser has _much_ better coverage, even... B-)

For those who have a ZyXEL Modem,there's a Freeware:
HackFax,now in version 1.10
it's made with some TTP,which allows you to Send,Receive,Pool-Faxes
It can 'transform' a ascii file to Fax file,with some functions like
Bold,Italic,Underline,etc...

Don't ask me for a FTP adress with it,I don't have a FTP adress.
But if it's hadr to find out of europe,I can UUCode it & send it as
Private mail to one of the US-users. And he can send it to a FTP site.

Best regards,

If you're interested in Go for the ST, there is a text-based Go game called Wally which plays a bit stronger than Gnugo, and also lets you change the board size... If you've already written a gui front end, it would be trivial to port it to Wally... This is something I know _I'd_ like to see! :-) Incidentally, where can one find your gui port of Gnugo?

There is a new version of CoMa available at ftp.uni-kl.de. CoMa is now up to version 1.50, with version 1.60 in the works. CoMa (which stands for Communications Manager) will only allow the sending or printing of the first 500 lines of a fax document. The program has both German and English menus, although the docs are in German only. CoMa can be run as a regular program, or as an accessory, allowing the user to send/receive faxes while using another program. An English manual is being worked on...

The figure of 24 titles under development came from comments made by Chris De Salvo of Interplay Productions, Inc. "after a 4 hour pitch from Atari to get them to develop Jaguar games." He attributes the figure to something Atari claimed in the discussions they'd had with Interplay.

And the AtariUser Lynx guy is so modest, too. <g>

It is TOS 1.06 which has this problem. TOS 1.62 fixed this problem.

I think that the numbers concerned are in the fourth or fifth line of
desktop.inf (one of the first few lines).

You will recognise the line as it has a set of 3 pairs of numbers, such as
00 34 11 or something to this effect.

As Steve mentions, it is the last number, in this case 11 (low rez), which can
be changed to 13.

Do this by following the rest of Steve's message.

>
>Assuming you are not using a Hi-res monitor or emulator, the STE will boot

*** NEW 85MB SCSI HARD DRIVE SUB-SYSTEMS FOR SALE ***

I currently have a number of 85MB SCSI HD Systems for sale. These are
for the Atari ST/STe/TT computers. These are NEW hard drives in NEW
hard drive cases. Manufacturers' warranties on the hard drive, case,
and host adapter. Why buy used drives when you can get a NEW one today
for only $375.00 shipping included? (COD $5.00 extra)
^^^^^^^
Here are the specifications:

o ICD FA-ST Hard Drive Case
o under-monitor designed case w/adjustable legs & fan
o DMA input and output ports
o external ID-switch
o external SCSI connector for further expandability
o internal expansion for second 3.5" SCSI HD

o ICD AdSCSI Plus ST Host Adapter
o full SCSI command set
o parity bit generation
o dual mode DMA daisy chaining
o battery backed real-time clock

o ICD Hard Drive Utilities

o Quantum ELS 85S 85MB SCSI hard drive
o low profile 1" x 3.5" form factor
o 17ms average seek time
o 4MB/s max. transfer rate
o 32K cache buffer

o The competition?
o Computer Studio 50MB $329 (no host adapter?)
o ToadStor 85MB w/ICD Link $359 (not expandable)
o D&P Computer Deluxe 85MB $389 (ICD host included)
o Toad Stealth 85MB w/Link $409
o Toadplus 85MB w/AdSCSI+ $418
o ICD FA-ST 85MB $499 (Micro Computer Depot)

Source record: 197342
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Dear netters,

I have just bought a 245 Mb hard disk, and have come across the problem of partitioning it. I can partition the Hard Drive using ICD utilities, but the problem is that I don't know how many partitions and what type of partitions to keep. Maybe the good souls out there in cyberland may be able to help me.

I know that I should keep about 5 Mb for my boot partition. the rest I do not know, how much to keep for TOS, and how much to keep for Minix and MiNT.

My system is :

2.5 Mb STe with TOS 1.06/2.06 switchable. (I am using mem.prg to patch 2.5 meg)
Colour and mono monitors
External floppy
Scanner
Laser Printer
Quantum LPS 240-S Hard Drive.

I will be upgrading to 4 meg soon (I hope) and and accelerator.

How much space should I keep for my MiNT partition that I will have installed on a Minix file system? I am thinking of using Simon Gornalls MiNT Distribution Kit from a.a, or should I go for the traditional way of installing MiNT?

How much space should I keep for this?

Also, I am going to install Tex, Smalltalk, Gnu C, C++, SB Prolog, Ghostscript along with other utilities. will i be able to run these under MiNT (As it would be nice to use extended file names like more.file.names). If so these would have to be in a Minix File System running under MiNT.

I am also going to install Minix v1.5, and think that I need about 32 Mb of Disk space, or do I need more, as there are Gnu utilities for Minix, around?

The rest I will keep as TOS partitions, and maybe DOS and Spectre partitions when the time comes.

Thanks in advance for people who reply to this query.

Danny.

2967. MEDUSA T40

Newsgroup: comp.sys.atari.st
Date: 1993-12-04 13:24:39 UTC
From: Lexicor@world.std.com
Message-ID: <CHIIL3.Kw7@world.std.com>
Source record: 197343

After popular request I post the in the newsgroups for Atari
==========

The Atari Clone Medusa T40 (feel free to discuss it here)

MEDUSA T40
==========

The first 68040 Based Atari Clone, now available at LEXICOR SOFTWARE CORP.

These are the specs of the New MEDUSA (price unchanged)

You may post this wherever you like.

MEDUSA T40

MC 68040 at 64 Mhz
Internal FPU and PMMU
Performance is around 26 MIPS, 4.5 MFLOPS

Main bus is:
32 Bit Data, 32 Bit Address
Bus Clocked at 32 Mhz
Full Bus snooping read and write

Atari bus is:
16 bit Data, 24 bit Address
Bus snooping, write
Own ACSI Address for full 32 Bit Address

Fast RAM
Can hold 8-128 Megabtes on board
Write 73 Mbyte/sec
Read 85 Mbyte/sec

EPROM is
2 MByte on board
32 Bit Wide

TOS 3.06 modified slightly

- ST I/O Board

-DMA
-MIDI
-SERIAL
-PRINTER
-KEYBOARD
-FLOPPY DD, HD, ED

-2 SERIAL PORTS (like TT Modem) (upto 115KBaud)
-IDE Bus (12 Mb/sec)
-ISA Bus (for own custom Graphics Board)

(This ISA Bus will work with any ET-4000 Based Graphics Board on PC Platform with the NVDI ET-4000, however NVDI ET-4000 only supports upto max. 32,000 colors as of this date)

Additionally you can get:

-VME Bus
VME Bus 16bit
Laser Printer Port (?)
ROM-Port
Mega Bus
-SCSI Board
TT SCSI
SCSI II
TT Lan
-DSP Board
DSP96002

and an MC68060 Board is sceduled for the year 1994

LEXICOR SOFTWARE CORPORATION

(510) 848-7621 - (510) 848-7613

Here a Price Breakdown in United States Dollars, users in North America will have the main parts assembled in the U.S.A. as parts are a lot cheaper here.

The MEDUSA T40 is ideal for the high-end Atari User. Based around TOS 3.06 It is very compatible. Following this message will be a short list of working programs.

- Basic Motherboard 68040/64
- Tower Housing
- ST Input/Output Board

Cost is: 2,490 U$D (Cost can vary depending on the exchange rate)

Availability: NOW, Transport time should take no longer than 2 Weeks!

Additionally you may purchase an ET-4000 Graphics Board 15/16bit Color onboard for about another 100 U$D + NVDI ET-4000.

A VME Bus Multiple Bus Board (see description above) for another 400 U$D

8, 16, 32, 64 or 128 Megabytes on board, price depending on SIMMS, current price is around 40 U$D per megabyte.

IDE Internal Drive will cost depending on drive size. Internal IDE, no external casing required.

NOVA VME 16M Graphics Board when purchased with VME Bus (for 24bit Color) costs 489 U$D.

All prices given are Recommended Retail, shipping not included!

Short Compatiblity List:

Chronos-3D Key frame Animator
Phoenix U.S.A. (Xenomorph-3D)
Prism Paint 1, 1.5, 2.0
ANM-Link (Relativety)
Cybersculpt (in STHigh)
Cyber Color
ARTIS 4.0
XCONTROL
Calamus SL
Calamus 1.09N
Platon V.2.21
Platine ST
Skyplus
DGRAPH
GMAN
Kobold
Rufus
Multigem
Multitos
SUperbase
Phoenix 2
Interface
Pure Pascal
1st Word
PKS-Edit
Seka Assembler
Devpac Assembler
Turboasss Assembler
Easyride Assembler
GAL-Prommer
Logic A.
GFA Basic 3.0 3.6TT
Delicious
Raystart
Topaz
VTX
Uniterm
Connect
Iconedi
Guck
Invaders
Piccolo
Signum 3.0
Matrix Drivers 2.2
Snapshot

Tele Office
ACS Pro
Argon
Crypton
Xenon V2.4TT
Crazy Sounds

No, don't do that - use the ignore-whitespace option to patch - you are
probably having the same line-termination problems I did.

For sale:
Magnavox 8cm-515 color monitor w/ custom cable for Atari ST.

640x240, analog & ttl-rgb, & composite-video & green-screen.

Better than Atari; 13" (vs. 12),U)^vtter made, useable with

IBM-comp's, Amiga, and composite-video machines (Atari 8-bit,

C=64, VCR, laserdisc player) as well.

* Includes $40 custom 8' cable for Atari ST; separate sound

jack for running sound thru stereo.

* FANTASTIC picture when used w/vcr or ld as hi-res tv; better

than any tv-set! Ideal for one needing both monitor and tv

in a small space. Can even have BOTH on and switch between!

Excellent condition.

$250 or best offer. Call (804)295-9995 or

respond to tipi@vivaldi.acc.virginia.edu

Surely you could one pack the binary which is not on A or B disks. I agree that it would be useful, though.

> 2) I only seem to be able to get drive B recognized for game saves, is
> there a way to get B used for Civ files too ?
Yeah, anyone know?

> 4) The manual is very confusing about making specialists - it tells
> how to make an entertainer into a taxman, but nothing seems to make an
> entertainer. Hints anyone ?
Merely click on a square from which resources/food/taxes are being taken on the city plan, this will make a specialist - defaulting to entertainer. To remove specialists, just click on an unused square on the city plan. This method can also be used to change where you are taking food etc. from. If you are at size 10, for example, then you can concentrate on resources instead of food until you build an aqueduct.

I suspect it had more to do with the fact that GEM was designed for the
808[68]... that stupid 64k segment limit, don't you know.

> For several years now, at least one resource editor out of Germany
> (Interface) has supported an extended RSC file type using long integer
> offsets in the header, thus eliminating the 64k limit. Both the new AES
> in MultiTOS, and Geneva directly support this larger RSC file size.

ORCs can handle larger RSC files too, but I don't know if its way is
compatible with MTOS or Geneva; the version of ORCS I have can't load
NewDesk or MultiTOS or Geneve icon RSC files. Does a fine job on Gemini
icons though.

> Icon Juggler, from John Eidsvoog at CodeHead makes it easy. But, of
> course, it's not included with the system, so users have to go looking
> for it.

That kinda sums up the entire Atari software base... If you don't have
a modem or Internet access, you're doomed.

> There are several problems with desktop icons, the first being, which
> desktop are you talking about? Desktop, Newdesk, Neodesk, Teradesk,
> Gemini, etc. They all deal with icons in their own way.

NewDesk should set the lead; other desktops could be updated to deal
with icons in a logical way.

> If you stick with the Atari-provided Newdesk, possibly the major difficulty
> is that the mappings between icons and files is a simple absolute index
> into the RSC file. If you remove any icons, it skews the remaining offsets.

Yet another stupid programming short-cut that affects the users in
unpredictable ways.

> > it's hard for a Windoze user to do it...
>
> I don't buy this. I don't use a Windows system everyday, so I can't tell
> you the exact steps required, but I can go in and assign new icons easily,
> within seconds. I've done it several times. (And I don't know what I'm
> doing, I'm just following the dialogs.)

It's certainly not as easy as dragging an icon into the icon field of
the ProgMan entry. On 3.0:

1) open Properties
2) choose new icon
3) type in the full path to an icon file
4) cross fingers and hope you got the right path

On 3.1:

1) open Properties
2) choose new icon
3) choose Browse
4) use the hellish Windoze file selector to search your hard disk for an
icon file
5) hope that file actually had the right icon in it

> This reminds me that there's a commercial CPX/DA called the NewDesk Icon
> Editor from SDS that does a pretty nice job not only of assigning and man-
> aging icons, but also modifying and creating new ones. I haven't used it
> myself (I don't run NewDesk), but have seen positive reviews. You might

SDS seems to have vanished for a long time while writing the Atari
Compendium, and ignored their customers while they were doing it...

> does this error mean? Does anyone know how the jumpers should be set on
> this drive?

You're using an ICD AdSCSI host, right Keith? Sense $03 is "Write
Fault. The operation was terminated with an unrecovered error condition
probably caused by a flaw in the medium. This indicates that there is a
problem, probably a bad sector. You should run a program like Cleanup
ST to check for and map out bad sectors."

If this happens when you try to format, it could be something wrong with
your RLL->SCSI adapter (like bad jumper settings or something)...
Someone with more experience attaching an RLL device to the ACSI port
should be able to provide some additional information.

>Atari ST User and ST Review seem to have dropped out of sight in Norwich -
>are they dead?

ST Format was a fortnight late for the November issue, and the December issue was a week late in Glasgow.

ST User and ST Review are both still alive. The newest issue of ST User came out about a week and a half ago, and the new ST Review is due Thursday this week, giving away Timeworks 2 on its cover disk. The release dates for the 2 magazines are every four weeks, and are staggered over a two week period.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

On my BBS there is a free TSR that I wrote in an archive called "rsbuf.arc".
This TSR works like the CACHEnnn and family where it looks at its name
in the AUTO folder and sets the buffer size to that many K. E.g. RSBUF4.PRG
sets the RS-232 buffers to 4K. The BBS number is USA 510-530-9682. The
file is in the ST area and is available to all callers. It has probably
been posted to other places too, but I couldn't tell you where.

Hello World!
I have been asked to write an install program which is to include decompression
of files. Can somebody mail me some source codes (C) for a decompression
and a compression routine. Preferably ZOO, ZIP, or ARC, etc.
Thanks

Also, a point of interest!
Since the loss of my 2.5Mb memory expansion, I have been running in
HALF A MEG. EEEEUUKK!
I have managed to get SpeedoGDOS running, with EasyDraw, and to
type a full page of text in vector fonts, and print it.
I find this quite amazing, as SpeedoGDOS requires 2 Megs!!!

Sincerely,
David Williams

2985. Lack of ka9q SLIP documentation

Newsgroup: comp.sys.atari.st
Date: 1993-12-05 03:10:07 UTC
From: u1418@sparc24.cs.uiuc.edu
Message-ID: <CHJKsv.Etx@sparc0a.cs.uiuc.edu>
Source record: 197264

Does anyone out there know where I can find decent documentation for ka9q?

I've got a release of v871225.31 that's missing its doc, gulam, and spool subdirectories, from umich. I tried getting a copy from ftp.tu-clausthal.de, but it was a corrupted .lzh.

I've diddled with the supplied config files (from umich) and can get net.tos to talk to my modem, but all it does is send `s' 27 times and respond that its request for IP number failed. (yes, I did set up the remote host for SLIP.)

Anyone got any suggestions?

Anyone know how to get net.tos to find config files that aren't in the root directory?

thanks muchly,
~Adam Aulick

2986. PC-ANSI font for Warp 9?

Newsgroup: comp.sys.atari.st
Date: 1993-12-05 03:33:16 UTC
From: umcordes@ccu.umanitoba.ca
Message-ID: <2drkps$c29@canopus.cc.umanitoba.ca>
Source record: 197212

Does anyone out there have (or know of) a PC-ANSI font that I can load into the Warp 9 control panel? I'm talking about a font that has characters 128-255 defined as the little graphic characters that the ibm has.

I have looked on atari archive and there seems to be nothing there.

I basically want something that came with STalker 3, but in a format Warp 9 can use! (What the hell does Warp 9 use anyway?)

Thanks!

Digital Optical Analog (a old NeXT developer) has a item called
BLACKMAIL wich is a digital voice mail system, it is quite professional
and I believe it plugs into the DSP port on the F030. Atari has a working
version of it (I saw it there) I did not
get a chance to see it in action, but it looks like a viable VAR item
for professional sales.

I think the product you're asking about is called BlackMail, and it's from Digital Optical Analog (DOA). It's an interface between the phone lines and the Falcon, but I'm not sure of the specifics. I've heard it's been sent to Atari Corp for compatibility testing (or something) and should be available for sale in the next few months.

The creators of BlackMail are on the net, so maybe they'll see this and respond with further details. Or, you could send them e-mail at: howard@doa.com or steve@doa.com

>I need to convert to run on my ATARI.

>Thanks in advance.

>Ste.

Please specify what type of BBC disks.

I have only had success transfering files from DDFS (Double Density) disks.
I have had severe problems trying to read DFS disks (Single Density) and I
don't know what the disk format is for ADFS disks.

(By double density, I mean 16 sectors/track, 256 bytes/sector.)

The standard BIOS/XBIOS commands for reading a disk will work for DDFS disks
but you should note that the Atari's operating system is expecting 512 bytes/
sector. If you read one track from the BBC disk then you should set up a
buffer of 512*16 bytes, not 256*16 bytes. When the disk is read, each
sector will be written into 256 bytes, then there will be a gap of 256
bytes, then the next sector is read, etc.

It is coming up the the end of full term, so I will not be able to add to
the above comments. If you need more help, mail me direct after Jan 11 1994.

Hi,

just a brief question: I need a excel like program for a friend. He thinks he needs to buy a DOS like Compu to do so, but I think there must be an equal program available on the ST. So if you know some, please mail me (please no posting.. I would not find the answers in all this hundreds of postings) and tell me if they are PD (or not), available per ftp or something like this.

thank you
Ronald

Right then, you lot out there, answer me a few questions will you. I am thinking of buying one of these 'Wonder' machines (because I already own an STE - I like Atari and want to stick with them), but the lack of news on the games front is some what limited, don't you say??

Would it be right in saying, that Atari should get hold of a few good licenses? For example Streetfighter 2 Super, Mortal Kombat, a Sonic type klone (eg Zool). Surely then the console will sell? I mean, if people saw these games running at the speeds of arcade machines in their own front rooms, then people like Nintendo and Sega would miss out and there names would no longer be of importance to us. Let alone future generations actually knowing what a SNES or Mega Drive actually were!!

And why don't Atari advertise the fact that they have invented this brilliant machine? I ask people if they have heard of it and they go: 'Is that like a SNES' or 'What the new Amiga CD32' or 'Panasonics 3DO?'. I mean, naive or what? But that is what it is getting to isn't it. Atari have gone down and according to a few people are never coming back up again.

Hopefully someone out there can answer these questions and pour light on the subject of 'Atari and Advertising'!!!

Peter

>games front is some what limited, don't you say??

You're reading the wrong newsgroup. Try rec.games.video.misc, where the continuing battle between the Jaguar, the 3DO, and the CD^32 wage endlessly. Oh, you also get lots of technical speculation and news of developers and advertisements and games and whatnot.

> Would it be right in saying, that Atari should get hold of a few good
>licenses? For example Streetfighter 2 Super, Mortal Kombat, a Sonic type klone
>(eg Zool). Surely then the console will sell?

Atari has nary the resources to acquire a "hot" license and develop it in a timely manner, I think. Better instead to just sell the machine and court the third-party developers, then let _them_ put the big titles on the Jaguar. And that's exactly what's happening. While Capcom (STREET FIGHTER 2) and Acclaim (MORTAL KOMBAT) are not Jaguar developers yet, Atari has already signed up Interplay, id Software, Accolade, Microprose, and others. And yes, ZOOL 2 is already named as a future Jaguar title.

> And why don't Atari advertise the fact that they have invented this
>brilliant machine?

Have you read the latest issues of GAMEPRO, VIDEO GAMES, or ELECTRONIC GAMING MONTHLY? Two-page Jaguar ads, two-page Lynx ads. An upcoming issue of DIE HARD GAME FAN will prominently feature the Jaguar on the cover. And television ads have been running fairly extensively in the New York City and San Francisco areas, where the current "initial test market" is running.

>Hopefully someone out there can answer these questions and pour light on the

Source record: 197284

: Does anyone know where there might be a file on the net which describes
: the contents of the DESKTOP.INF file? I have figured out part of it on
: my own, but the rest would require considerable trial and error (empha-
: sis on error). Posting such infomation here might be useful as well.

I don't think such a thing exists, although it most certainls should. When Alistair Bodin of Atari UK was asked for some information on the format of DESKTOP.INF (and NEWDESK.INF) he replied :"We do not recommend that you modify these files yourself".

Certain functions, however, are only possible if you modify the DESKTOP.INF file yourself though. I have thoroughly sussed the DESKTOP.INF file though, and most of the NEWDESK.INF file (although this is different in the latest TOSses).

If you have any specific questions regarding these files, feel free to ask me. Documenting the .INF file would certainly be a mammoth task, but I'll try when I get time. In the meantime, here's some often-missed tasters...

(If anything is wrong, its because I don't have a .INF file to hand, so I can't check exact syntaxes. Keep a backup of your unmodified .INF file.)

1) WINDOW MASKS are available in TOS 1.x. In the #W line which is appropriate near the top, simply change '*.*' to '*.PRG' or anything of your choosing. This will appear when the new .INF file is re-read. Note, though, that folders do not appear, and if the window is closed, the mask will have disappeared when you re-open it.

2) UNIVERSALLY INSTALLED APPLICATIONS: These are made by changing '@ *.*@' in the #F (or whatever) line to e.g. 'C:\VIEWER.PRG@ *.*@. to send all files whose masks do not appear below in the specifically installed applications to C:\VIEWER.PRG.

3) Changing icons. In TOS 1.x, you are limited to Filing Cabinet, Folder, Window, File, Trashcan, but these are fully interchangeable, so you can e.g. have your 'recoverable trashcan' folder as a Trashcan icon, and your 'Clipboard' drive as a Folder Icon, and your Applications Drive as a Window, etc. etc. This is done by changing the HEX identifier of th3e icons. I can't remember where they are, but I think it is obvious when you look.

Anyway, that was fun wasn't it!!

Also, remember something which has been said elsewhere recently, which is to leave the single trailing space on the end of every line, and a blank line at the bottom. Use a 'clean' editor. I use GENST from HiSoft.

Note to all flamers: I have probably made the odd mistake, so please
correct me if you can, but please, no flames. It was just a bit of
friendly advice remember. I am sick of writing something innocent here,
and being flamed into niext week.

Steve Taylor.

Perhaps you could find a friend with an Archimedes??? I believe these
read/write both MS-DOS and BBC disks without any difficulty. BBC BASIC can
need quite a bit of modification, depending on which ST basic program you
will be using. I suppose the most compatible would be the BBC emulator,
although it probably runs slower than your BBC itself!

2.5.4's cc1plus still produces an address error (3 bombs) on a plain ST
with 4M; I didn't test cc1 too much but at least it didn't crash on
hello.c... :-\

I'll try 2.5.5 as soon as it moves out of New on a.a.u.e; I've heard
that 2.5.x also have sever problems on Linux and other x86 and 0x0
architectures... from the sound of things, they were being pretty
optimistic when they said 2.5.5 would be the last 2.5.x...

I was the proud owner of two of the Atari 8-bit systems (400 &
800XL) and I currently own a 520ST which I got in '86. I stopped using it
a few years later from lack of local support, and I'm interested in
getting a newer Atari to "play" with, now that I'm a CS major and I'm
learning about how cool the Motorola series is. Would someone please
recommend to me an inexpensive system that can show off what the ST can
do? Because I have a monster PC-clone already(sorry, better support for
it where I live) I won't need a big hard drive for common apps, so that
should cut down the price. Maybe there's an Atari FAQ somewhere that
describes the different models. I know the PC and Mac machines very well,
but the only STs and Amigas I've played with were 1st generation.

Thanx in advance...

Sig under construction...Please excuse the inconvenience of misspled words.

Does anybody out there use Emagic Notator Logic on an ST or Falcon.
I would very much like to hear what it's like.

Does it run under MTOS?
Is it very slow? (even on a Falcon?)
Does it include a MIDI expander?

If you know the answer to these questions please mail me. I will be
very greatful, as I am thinking of upgrading from Creator SL -> Logic.

Hello Falcon owners!

I'm having a great deal of trouble with the new Falcon compatible version of Ishar II. Don't get me wrong, it's a fantastic game, but it crashes so often on me, it's almost worthless trying to play it!

I have a Falcon 030/80 with TOS 4.04 and am running the extensible control panel, and the FPATCH2 program. I run the program off the harddrive (which doesn't seem to cause a problem, since when it's run off floppy it crashes as often) and, depending on if I select MUSIC ON, the game crashes (freezes, makes annoying noises, or bombs) sooner or later. The game tends to crash earlier if I let the soundtrack play. Is there something I'm doing wrong? A patch program I'm missing? Has anyone else experienced these problems?

The game allows play when the music's off from 10-60 minutes, and from 0-15 minutes when it's on.

Any help regarding this irritating problem would be GREATLY appreciated!

Take care,

Jay Millar

> one, if you ask me).

TeX (or LaTeX) is not a word processor, it's a typesetter with rather
rigid style formats unless you want to learn a lot of TeX macro
programming. EMACS is not a word processor, it's an operating system
disguised as a text editor.

TeX + EMACS != a word processor

You wouldn't call PageStream and Tempus a word processor (a DTP program
and a text editor) even though it's WYSIWIG.

I have uploaded the file 'pi_st.zip' to atari.archive.umich.edu in the directory 'atari/New'. This file contains (among other things), the three programs which were sent in to Stuart Lyster for computing PI on an Atari ST.

This is my first attempt at uploading a file to an FTP site; I think I did it correctly. Enjoy, one and all!

Message-ID: <1993Dec6.012015.5432@bradford.ac.uk>
Source record: 197205

```
: Could you name me programs which allow the exchange of encrypted
: data between TOS and DOS-machines? I would use the PRG for an Atari
: 1040 STF.
:
: Please name me the Atari *.PRG, its MSDOS counterpart AND possibly
: where I could ftp the stuff.
:
: Please e-mail me at markus@uni-bonn.de
```

This doesn't make a great deal of sense... Sorry...
Here goes though...

I would try the ZIP archiving utility. On the ST, STZip by Vincent Pomey
is used, and on the PC, PKzip is used. Later versions include data
encryption along with compression and archiving facilities.

OK

Steve Taylor.

Oh yes, it was.

> You can get 1000+ font from Bitstream (buy them of course).

Compared to the 10,000 or so you can get for free, or ShareWare or
commercial, etc, of Adobe Type-1 fonts.

> Some years ago, when Atari decided to use the Bitstream-Format
> there was no alternative around:
> Adobe hadn't released the Type1 specifications
> Noone had ever heard of True Type.

That's nonsense. By the time they got finished fooling around with FSM
"we're having trouble getting the manuals printed" GDOS, Type-1 was by
far the most popular font scaling technology on Macs AND PCs, with
TrueType in use on most Macs (FSM-GDOS was ready for release after the
Mac System 7 shipped with TrueType).

> Some time later Microsoft decided to define and use TrueType,
> Adobe decided to release the Type1 specs, which made TrueType
> redundant.

Uh, Apple "defines" TrueType; Micro$oft simply bought the rights to
distribute a TrueType engine in their software.

OS/2, on the other hand, was sensible enough to pick up Adobe's Type-1
format, and include Adobe Type Manager as an integral part of their
system software.

> But guess who used TrueType in its GUI and guess who uses this GUI
> on his/her computer because shell-commands are too awfull to type
> and there was (is?) no standard way to do graphic on that computer.

Huh? Does this mean TrueType is a bad technology? Because they
attempted to add a GUI to a dead architecture and breath further
zombi-like life into it? TrueType is bad for other reasons (no kerning!
max point size of 127 points!), but definitely adequate for most people
needing cheap font scaling technology.

> Now there are million of people using this GUI, porting fonts or
> even building new ones.

Gee, sounds horrible. If only Atari suffered from this.

> What do we learn from this:
>
> *Never* start with something new. Someone else will copy it (modify it)
> sell it a million times and you get blamed for not following the
> market (not technology!) leader.

Huh? Are you saying Atari should sell clones? Or maybe that Atari
should use TrueType instead of following the workstations you mentioned?
(Personally, I've never heard of a workstation using BitStream's font
format, but my exposure to workstations is limited to a few Suns and
NeXTs... guess which format NeXT workstations use -- Adobe Type-1!)

> Maybe i should have a look at the Bitstream code, steal the
> TrueType specification (or are they available in the public domain,
> including undocumented features?) and write a TrueType to Bitstream
> converter.

Go for it. TrueType specs are on one of Micro$oft's ftp servers (which
are running Windoze NT, so watch out for crashes).

Or better yet, write a Type-1 to BitStream converter; the Type-1 fonts
are much better than the TrueType fonts.

Hallo Mein Freunds!

Wie Gehts!?

I am posting this that someone who gets/reads C'T will e-mail me some information about it. I am particularly interested in it as it seems to have many articles on hardware projects, such as the ST IDE controller, the TOS 2.06 board, etc., but I am yet to find a place which sells it here in Australia (maybe something to do with it's German Language ...)

Anyway, all help will be greatly appreciated,

Best Regards,

Karl.

3017. CLA version 2 Release Announcement

Newsgroup: comp.sys.atari.st
Date: 1993-12-06 09:49:07 UTC
From: Craig.Graham@newcastle.ac.uk
Message-ID: <CHLxxv.BJ1@newcastle.ac.uk>
Source record: 197274

```
================================================================================
CLA
DIGITAL LOGIC DESIGN & SIMULATION ENVIROMENT
Version 2 Release 1
================================================================================

Release Date: 6/12/93

After a rather prolonged delay, (over a year), CLA LOGIC v2 is now almost ready
for release.

Here is the specification of this, the Version 2 Release 1 edition of the system.

- MultiTOS friendly (Xacc2 support coming soon as well).

- Full GDOS support (for printed output), with a choice of GDOS or custom vector
fonts in printed output.

- .GEM Metafile output of schematics & simulation results for inclusion in
documentation (GDOS/NVDI/FontGDOS/Speedo)

- A whole new GUI, with flying dialogs (in a window of course), roll-up toolbars,
pop-up & pull-down menus, multiple editor windows, and more....all fully
GEM'ed & MTOS happy. TOS4+ is supported. If you've ever used Motif or
MS windows, then you'll appreciate this.

- Multi-window editor allows you to work on many blocks simultaneously, either
using a scaled-to-fit view, or a scrolling window.

- Selectable drawing scale & page size (individual to each block).

- Falcon/TT/STE/ST compatible.

- Works in Colour, but a minimum vertical resolution of 400 is needed, so a
virtual screen driver is needed on ordinary ST/STE's to use colour.
(eg Monster)

- Support for Falcon extended GFX modes (ScreenBlaster, etc), and TT video
cards such as the CrazyDots Card.

- Better gate level editting (Move gate, rotated gates, etc).

- Improved Display quality (proper arcs & circles) & speed.

- Full hierarchical structuring of designs with easier block traversal.

- User definable keyboard shortcuts for all functions.
```

- User edittable gate representations, via a newly written vector object
editor.

- Interactive simulation, with the following tools:
o Multiple 20 trace logic analysers
o 'Active' probing
DISABLED o Monitoring bulbs, for those 'quick little checks'
o Variable simulation resolution.
o Auto clocking inputs at definable frequencies
o Manually setable inputs for interactive simulation
o Multiple Word Generators for batch simulations

The simulation functions are fully integrated and accessable at any time.

- Library module facilities:
o Predefined libraries
o Library module loading.
o Design merge
o Proper (new) Librarian program for maintaining libraries

- VHDL support. A (very limited at present) subset of VHDL is supported for
textual design, in the form of a seperate compiler which produces CLA
blocks which may then be inserted into designs.

- A seperate (for now) Finite State Machine editor which produces PALASM code
for your design so that you can actually design real chips.
(Only supports the 22V10 directly at the moment). Also outputs .GEM
files for documentation purposes, and gives detailled reports of how
the FSM has been implemented in the PAL, including:
o Device Pinouts
o Output Equations and States
o State Equations
o Input Variables & Transistion lists.
All on top of the PalAsm source code (there is a PD version of PALASM
for the ST called PASSM which can then be used to produce JEDEC files
for programming PAL's with. This is the first of the device synthesis
modules for CLA, but will not be the last.

- Fanout checking has been removed & will now become part of an upcoming
EPLD Synthesis Tool for CLA designs.

- Maximum number of Gates : 10,000

This was a summary of some of the nicer features of the program. There are many
more features actually in the package.

SYSTEM REQUIREMENTS:

- Basic System
This is a real minimum, a hard drive & NVDI are recomended as the speed of
the system on this set up will not be good, and the screen area will seem
very cramped, with no room for toolbars & analysers.
o Atari ST
o 2 Meg memory (minimum - more is needed for large designs).

o Double sided floppy.
o 640*480 Mono Monitor

- Our System
This is what we develope on (and in future, for). Although we test with multiTOS, it tends to slooow thiiings dooown in practice, so we don't use it.
o Falcon 030
o 4 Meg memory
o 65Meg Hard drive
o SVGA Monitor + extended screen drivers (800*600 16 colour).
o NVDI + WINX2.1

- Ideal System
This is what we'd like to have, but cann't afford.
o Atari TT
o MultiTOS
o Loads of memory (8Meg +)
o Hard Drive
o 19" Monitor.
o NVDI

Where Can You Get It ?

CLA2 has been uploaded to atari.archive.umich.edu & ftp.uni-kl.de, look for the file CLAV2R1.ZIP.

PLEASE NOTE THAT CLA IS SHAREWARE......AND MANY EXTENSIONS WILL NOT BE MADE AVAILABLE VIA FTP (such as the Extended Finite State Machine Designer & EPLD Synthesis Tool).

>
>I believe we are (HiSoft that is), since I come from that part of the world
>(further North really, Cumbria), its kinda home ground to me.
>

I attended the Atari Show in Birmingham yesterday... where were you
Hisoft??

About a dozen or so exhibitors - all had F030s, most of them
accelerated to 32MHz.

Compo had Geneva, which looked pretty quick (but/and MiNT
incompatible), That's Write 3 which does Speedo fonts and all their
other stuff.

Titan Designs (makers of the Reflex graphics card for STs) had their
video digitiser (30fps), Thought (a new graphical ideas processor,
like Calligrapher's outliner), Chromastudio (24 bit
animation/morphing/painting program from the guy who did Photochrome)

System Solutions were selling 28 and 36MHz accelerators for STs,
demonstrated a F030 32MHz running BlowUP 2 (on sale) with Cubase Audio
(on sale), and their normal stuff like Tower cases.

It was a disappointingly small show, considering it was run by the
main ST magazines...

>AFAICR the binding just points the intin point in the control array to the
>string that you pass.
>

From what I understand, v_ftext16() et al assume the word array is
terminated by a 0x0000 word. Unfortunately, this *appears* to be a
legal BICS character, namely space.

I hacked a new binding to take an extra len parameter, which thus
copied the 0 words across, but Speedo simply failed to print after the
first 0x0000 (well, it might have printed a space, but I couldn't
distinguish white space from the white screen :-(

Sooo... the Lattice binding appears to be Ok (AGK breathes easily...)
but my info on BICS seems to be in flawed.

Anyone know anything on BICS? Like how to print a space??

Oh, the main reason I want 16-bit text was to get proper typographical
quotes and dashes, you know, like the Macintosh. I doubt there will be
a speed penalty using 16-bit characters, considering the binding for
8-bit characters!

--Chris

PS: did the documentation on global constructors/destructors fall out
of the word processor Alex?

Hm. Interesting. I suppose I should be happy with the boxes (one at
the moment since I am not 'trenning' the arrows) instead. I must have
missed them in the 2.2 manual. Weird, I read it quite thoroughly. Why
don't the boxes have some kind of descriptive ASCII character in them?
(Well, there isn't much to choose from the IBM set, is there...)

BTW, has anyone got the new MultiTOS which has a 'SMALLER' which
iconifies windows? (I don't) What does that look like? Are Atari
still using characters or did they finally do something which can
compete with the Motif or 4Dwm look?

Is Atari Explorer Dead? I gave them my money almost two years ago and
I have not received anything. I called them about a million times and
got a run around each time. !

I was told to send a letter to Gordy at Atari. So much for that!
Does anyone know how to get a refund from these people? All I want is
a response as to why I got screwed, and my money back, and a subscription
to something!
Later

spb@liverpool.ac.uk (Mr. S.P. Bode) writes:
>Does anyone know of any software that will allow me to read a BBC disk
>on my Atari?, I have a BBC program with pages of data statements which
>I need to convert to run on my ATARI.

I managed to do it using Knife-ST, a disk utility program from HiSoft.
It will read 'alien' disks at the sector level and has a facility to build an
Atari file (in memory) out of what it finds.

Fortunately, ADFS files are always contiguous so as long as you know the
starting sector and length (from *INFO on the BBC) it's not too difficult to
reconstruct the data. However, it's a bit tedious since you have to select
each sector in turn, so it's only really useful for one-off conversion of a
small number of files.

A more effective solution would be to convert the complete disk to a single ST
file and then write a program that understands the ADFS directory structure and
could extract individual files. But I never got round to that...

>entertainer. Hints anyone ?

Click on the city to get the information about the city displayed. Then click on the map of the squares around the city. Choose a square were there are symbols which indicate that some one is working. This will make the person working there into an entertainer. If you have some specialists and click on a square where no one is working then one of the specialists will become a worker. Often you will want to use this technique to change where people are working.

Can someone post information about where one can get Civilization for the ST? My comments are based on the IBM version, but I would have gotten the ST version if I had known it was available (and I still might if the price is not too high).

>

The screenshots in the Compendium have 3D G_BOXCHARs to the left of the FULLER widget, with a little upwards pointing triangle (ASCII 128?) in. Upwards pointing? But it minimises the window! Sheesh.

Interesting Compendium snippet: AES 4.1 has the capability of using a Speedo font (any index, any point size) instead of the system font. You set some AES variables in the GEM.CNF, I recall. I don't know how this affects resource files (sizes are stored as multiples of characters internally)

Hints from Emily Postnews
==========

(Thanks to John Henders (jhenders@jonh.wimsey.bc.ca) for this bit of _humor_.)

Emily Postnews Visits comp.sys.atari.st

(Due to popular demand, (well at least one persone asked anyways), Emily has taken time out of her busy schedule to answer a few commonly asked questions specific to c.s.a.st.)

Dear Emily.
Some Amiga user is raving on c.s.a.st about how wonderful
his computer is, and how awful mine is. What should I do?
signed My Computer is NOT a Toy.

Dear My Computer, etc,etc.
Many people's egos are so tied to their possessions, they
have to affirm their existance by raving about the superiority
of their machine to anyone who will listen. You should immediately
flame these people into cinders, using every rumour or misconception
you've ever heard about their brand of computer, as this will cause
lots of posts, and develop into a massive flame war, which is one
of the main reasons most people read c.s.a.st. If this didn't happen
every six months, everybody would unsubscibe to this newsgroups from
boredom.
Or, you could put comp.sys.amiga.advocacy in the Followup to:
line, and any article replying to yours would go to the newsgroup
designed for this discussion.
Or, if your newsreader supports it, you could build a KILL FILE,
which eliminates any post that has the word Amiga in it.

Kill files can be created in rn and trn by hitting the 'K' key.
This will make a kill file based on the article you were reading
at the time. Then control K will put that file in the editor for you
to play with. You use the same regexp commands here that are in rn.
For example. /[Ff]oo/h:j would search all headers of unread articles
for both Foo and foo, and junk them. Check the docs for your newsreader
for further details.

Dear Emily.
I like flame wars, and want to start one of my own, so my name
will be as famous as Richard Covert's.
Signed, Too much Time on My Hands.

Dear Too much time.
Sorry it took so long to reply, but Richard's in my kill file
and someone had to forward your post to me, or I'd never have seen it.

Flame wars are fun. They're the main reason people creted Usenet,
and should be encouraged at every opertunity.
Some of the most common tricks for starting flame wars are as
follows.
1: Post a note in another newsgroup telling all the users there that
they own a piece of junk, and if they had a half a brain, they'd have the
same computer you do, as it's obviously the best.
2: Toss a bit of slander against another computer in a totally
unrelated post. This guarantees a follow up, even if your original
post wasn't of any interest.
3: Create a signature file that has a put down of another computer
in it. This will get flame wars going in threads that have completely
unrelated Subject: lines, thus slipping through all but he most exacting
kill files.
I hope you find these tips handy in creating your next flame war.
And just remember, your computer MUST be the best, after all, it's yours.

:DEV: 93.06.11
How do I become a developer for the Atari ST?
==========

Contact Bill Rehbok, (408)745-2022

[UNITED STATES ONLY. IF YOU LIVE OUTSIDE THE UNITED STATES, CONTACT
YOUR COUNTRY'S ATARI HEADQUARTERS FOR MORE INFORMATION.]

Bill can explain the program to you, and send an information packet if you
desire.

Atari has gone to a 2-tier developer membership. The 'higher quality'
developer support goes to commercial developers, and costs $250. The
'no-hand-holding, no announcement of company future products, no access
to discounted hardware' goes to noncommercial developers, at an initial cost
of $125, plus $50 renewal fee each year.

Both tiers receive the ST/TT Developer Kit and all developers have to fill
in an application form and a non-disclosure agreement. Contact Bill for

more information.

Atari is now selling the developer's kit (or parts of it) seperately. No project-in-development or non-disclosure agreement is necessary.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on GEnie in January (of ????) by John Townsend. The original also appeared in the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA 22170). It has since found its way to me, and is being posted to comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but that it cannot be dubbed "official" unless it originates, on paper, from Atari. This makes sense, as electronic communications are easily modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and GEM return codes which appears to be correct. The tables have been modified to reflect his information.

The following is an unofficial list of the errors that can appear while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0
Fundamental error.....-1
Drive not ready.....-2
Unknown command.....-3
CRC error.....-4
Bad request.....-5
Seek error.....-6
Unknown media.....-7
Sector not found.....-8
No paper.....-9
Write fault.....-10
Read fault.....-11
General error.....-12
Write protect.....-13
Media change.....-14
Unknown device.....-15
Bad sectors on format.....-16
Insert other disk.....-17
Invalid function number.....-32.....1
File not found.....-33.....2
Path not found.....-34.....3
No handles left.....-35.....4

```
Access denied..................-36.............5
Invalid handle.................-37.............6
Insufficient memory............-39.............8
Invalid memory block address...-40.............9
Invalid drive specified........-46............15

No more files..................-49............18
Range error....................-64............33
Internal error.................-65............34
Invalid program load format....-66............35

The last code is the infamous "TOS error 35"!

Also, some unofficial information via Alan Pratt:

Notably, you should add -48: ENSAME (not the same drive, occurs when
you call Frename and the two names you give aren't on the same drive),
and -67: EGSBF: you can't use Mshrink to GROW a block of memory.

Those bombs that appear on your screen are error messages from
the 68000 micro-processor.

Number
Description of bombs
=========================================

What is Free-Net and how can I get access?
==========

A "Remodeled" Atari S.I.G. Opens

By now many of you have heard of the Cleveland Freenet, or more specifically the Atari S.I.G. on the Cleveland Freenet. For those who haven't, the Cleveland Freenet is an experimental computer system providing free public community telecomputing. Basically, it's a lot like a public library of the future. Many of these systems are popping up all over the country. Don't be surprised if one pops up in your neighborhood in the future.

Recently the Atari SIG has undergone a significant face-lift. All the regular areas are intact including its news sections, user group newsletter, online magazine sections, general as well as specific computer discussion boards (8 bit, 16/32 bit, Lynx, Portfolio), and our weekly Sunday night multi-chat conference.

The conference starts at 8pm EST sharp and is on channel "+Ataricon". What the staff at the Atari SIG has added, has given the Atari SIG the potential to cover all grounds of Atari and its related products.

The most noticeable addition to the Atari SIG is the Programming and Development Forum. This forum is intended to be used by developers, professional programmers, and Atari hackers (the old definition of "hacker") as a means to share ideas, help each other out, and find out the latest technical information on Atari's products. This board is ran by newly acquired SIG Operator, Peter Haller, a professional programmer who is running developer sections on hardware and software development, programming, MIDI applications development, Graphics Design, plus many other sections that can definitely become a programmer and developer's dream come true!

Last, but definitely not least, the Atari SIG has a restructured Product Info and Support Board and a new Special Applications Board. The Support Board includes a vast library of support lists. These lists range anywhere from phone numbers of Atari dealers and producers, to software reviews for 8 bit, 16/32 bit, Lynx, and Portfolio software. To sum it all up this area covers what's out there, who makes it, and how to get it for all Atari products. The Special Applications Board is just starting out. Currently there is an area for users of MIDI on the ST. MIDI users are encouraged to use this as a means to discuss MIDI related topics. This section is expected to expand in the future.

Accessing the Atari SIG has never been easier. One can access it via Internet by telenet'ing to 129.22.8.75 or "Freenet-in-b.cwru.edu" or by calling (216) 368-3888 300/1200/2400 bps. Once on the system, a user can apply for an account application and logon as a visitor. Once here, simply type "Go Atari" to get to the Atari SIG. A visitor can go anywhere on the Freenet and can read anything. They can't

post messages until they get their permanent accounts, however.

For additional information on obtaining access to Freenet write to
myself via the e-mail addresses above or by writing the SIG at its US
mail address:
The Atari SIG
P.O. Box 21815
Cleveland, OH 44121 USA

Lastly, a freenet application is available in the mail by writing a
request to the above address if you rather not download it from Freenet.

The Atari SIG is ready to serve the thousands of Atarians throughout
the world. We look forward to seeing you all real soon! Remember the
staff of the Atari SIG are volunteering their time for no pay and the
Cleveland Freenet, as well as the Atari S.I.G., is a non-profit organization
existing for the free exchange of information.

--

Mark Leair
Atari SIG Public Relations

:MAGS: 93.09.04
What magazines are available for the Atari ST?
==========

If you've got updates, mini-reviews,
or more information on other magazines, please send them to me via e-mail.

As always, WRITE to a company before sending them money for a subscription.

US mags:

AtariUser, published by Quill Publishing Company

Cover Price: US $1.00 Canada $1.45 UK 1.50 (AtariUser is available for free
[$6.00/50 magazine shipping charge] from participating computer dealers,
bookstores & user groups!)

Subcription Rate: $21.30 US Bulkrate, $41.30 US First Class.
Address: AtariUser, 113 W. College Street, Covina, CA 91723 USA

Current Notes, published by Current Notes Inc.

Cover Price: US $3.95

Subscription Rate: $27.00/year (Atari clubs registered with Current Notes may
subscribe at $23.00/year) US, $35.00/year (Canadian club members at $31/year)
Canadian, Foreign rate $44/year.

Address: Current Notes Inc., 122 N. Johnson Rd., Sterling, VA 22170 USA

Atari Interface:

Write for a free sample copy of the Atari Interface magazine
(Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108)

AIM is soon to be available in Canada, Europe and Mexico, and should be in all local WaldenSoftware stores and many bookstores. If your "local" Atari dealer doesn't have it, he should be able to get it for you...

UK Mags:
(Thanks to Sam Marshall <samm@castle.edinburgh.ac.uk> and Kevin Busby <kevinb@syma.sussex.ac.uk> for some of the info here.)

ST Applications:
---

formerly the ST Club Newsletter, this is now the only non-games mag in the UK (although see ST World below). Approx. 4,500 copies per issue sold. News, reviews, interviews, tech tips, general forum, programmers' forum, PD catalogue. DTP'd on an ST. Retains a 'user-driven' feel. Recommended. The associated ST Club runs a PD distribution service and distributes a couple of commercial programs too (Fontkit Plus, UIS III, Molgraph, CRL Virus Killer, etc.).

12 issue Subscription now:
With Disk 6 Mags Without Disk Mags

UK: #26.50 #18.00
Europe (air) #30.50 #21.00
World (air) #38.50 #31.00

Address: ST Club, 2 Broadway, Nottingham, NG7 1PS, UK.

ST World:
---

formerly the leading UK non-games mag. Became a quarterly 'buyer's guide' in Autumn 90.

ST Format:
---

all-purpose 150-page monthly, mainly aimed at young people. Lively, but of uneven quality. Big leisure section, but other areas covered too. Includes cover disk - mix of games demos and (usually out of date) PD utilities. Probably the biggest-selling UK ST mag. Has had several public rows with Atari UK.

Future Publishing, Somerton, Somerset, TA11 6TB Tel. 0458 74011
Fax 0458 74378

Atari ST User:
---

like ST Format. Generally (amongst online users) thought
to be not quite as good.

ST Action:
---

games, games and more games. And games.

Atari ST Review:

Lots of info, more mature editorial style than Format, but not so
polished. 1 cover disk per issue.

Subscriptions: PO Box 500, Leicester, LE99 0AA. Tel: 0858 410510.

There are also, I think, some MIDI mags with strong ST content. I don't
have their names.

German Mags:

ST-Magazin, TOS, and ST-Computer united in August 1993 to the
"ST Computer", which is the only remaining magazine in Germany.
(I don't know if the following info still holds, then. --Steven)

ST Computer:
---
11 issues/year, typical around 180 pages
Subscription: DM 80 (domestic), DM 100 (normal mail), DM 130 (air mail)
Address: Heim Verlag, Heidelberger Landstr. 194, D-6100 Darmstadt 13 GERMANY

French Mags:

ST Magazine

Monthly in French. Oriented towards developers, professional users. Comes
with a disk each month.
ST Magazine - 10, rue Hegesippe Moreau - 75018 Paris - France
(French Teletel users: 3615 Teletel access, code STMAG)

STart Micro

Monthly, includes a cover disk. 11 issues per year. 64 + 16 (separated) pages.
Price: FF38 per issue, subscription: FF360. Subjects: Desktop publishing,
graphics, initiations to C and GFA Basic, survey of outcoming software, music,
folders. Minitel access: 3615 code ATARI. Address: FC Press, 57 rue Danton,
92300 Levallois-Perret, France.

Dutch Mags

ST, published by Stichting ST , postbus 11129 2301 EC Leiden the Netherlands
---
cover price: fl 6,95
Independent magazine by and for atari ST users.
covers all different topics from applications to games and hardware.

60 pages.

6 times a year. One year subscription fl 35,-
black and white pages.

Atacom, by Atari Club Groningen.

Never seen this one. I suppose you have to be a member of the club or so.
price is fl 4,95.
Adress of the club: Atari Club Groningen, Postbus 9164
9703 LD Groningen, the Netherlands.

Atari Nieuws, by Atari ST computer club Nederland

News paper sized publication. Lots of colour on newspaper pages. Not too many
pages though.
price is fl 3,95 (cheap cheap)
monthly publication.
adress: ACN, Postbus 5011, 2000 CA Haarlem, the Netherlands.

GFA-info, by GFA gg (usergroup)

Publication of the GFA-basic usergroup. This group has a lot of mainly
educational software available.
price is fl 5,00

adress: GFA gg, Frankrijklaan 14, 2034 BA Haarlem, the Netherlands

ST News, by Stichting Computers Eindhoven

This is an electronic magazine. It has been around for about 6 years now
and is completely in English!!! The first issues were in Wordplus format
back in 1986 but from the 6th issue on it included a readerprogram
both for color and monochrome. Even with music.
price is fl 10,00
adress: S.C.E., Kornoeljelaan 22, 5552 RC Valkenswaard

Swiss mags:

Atari ST News Schweiz

Dutch Atari ST Nieuws translated into German for the Swiss :-)

:TIPS: 93.06.11
TIPS AND HINTS from other users
==============================

Any 'multisync' monitor which handles 70 video fields a second can be used
with the ST; the custom cable involves no tricks, or commercial ones are
available. The original NEC multisync does NOT handle 70 fields a sec.

More than 3 bombs often means more than 1 error, so interpretations are
tricky.

An ST-formatted disk which is not readable by a PC can be made readable by putting the 3 bytes EB 34 90 (those were 3 bytes of hex) at the beginning of the boot sector (sector 1 of track 0). This can be done with either an ST or PC absolute sector editor. The Desktop of TOS 1.4 and higher does this automatically.

Some (older) PC-3.5"-drives cannot deal with the short track-header produced by ST formatters. On those drives, ST-formatted disks are not readable, independent of their boot sector contents. The other way, however, does always work: format on the PC.

When using disks formatted on a PC in an ST, make sure to insert and access a disk with a different serial number in between disk changes.

For those with the 'inaccessible' mouse and joystick ports, a joystick extender cable will make life easier. The Y-cable joystick extenders make it extremely easy to keep mouse and joystick connected to port 0, and a joystick extender cable in port 1 makes for easy hookup after you've moved the machine.

BARREL is a program which can redirect printer-data to a file. It comes in handy when your printer is unavailable, and the program does not already have an option to 'print-to-a-file'. (It is available on the atari.archive server.)

DBLEFEAT is a program which can redirect disk access from, say, drive A to drive B. Handy when a program 'hard-codes' the data drive, and you wish to use your hard drive instead. (It is available on the atari.archive server.)

On the Desktop, holding the right mouse button allows you to manipulate files in other windows. This is useful for a number of reasons. An example is this: say D:\BLAH.ARC is a file you would like to extract to D:\, but ARC.TTP is on C:\. Top D:\'s window, then hold the right button while double-clicking ARC.TTP in an inactive window.

:ZNET: ??.??.??
Where can I get copies of ZNET?
==========

ZNET is now Atari Explorer Online. Please see EXPLOR for more info.

:EXPLOR: ??.??.??
Where can I get copies of Atari Explorer Online?
==========
Atari Explorer Online magazine is available on CompuServe and GEnie. You can also get copies mailed to you by sending an e-mail message to

stzmagazine-request@virginia.edu

indicating you wish to subscribe.

They won't get to you on Friday (which is when they're posted), but Greg Lindahl provides an excellent service to the networking community by sending these out.

Atari Explorer Online and some information from the Current Notes user magazine are also available from the atari.archive server under /atari/magazines.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st mail server. You can also try the commercial on-line services such as GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.) into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st postings. If you aren't reading these two newsgroups, you should consider doing so. You may obtain uuencoded files as e-mail. You can obtain a help file by mailing a message to archive-server@spud.hyperion.com, with the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains a multitude of Atari ST PD and shareware programs. If you don't have access via FTP you can obtain many of the files via e-mail. You should first obtain a help file by mailing a message to atari@atari.archive.umich.edu, with the main body of the message being the word 'help.'. If you are from a uucp site, please enclose this statement also 'path host1!host2!....', where host1!host2!... is your path. Please read the help file completely before you ask questions, and then send any you may have to jon@atari.archive.umich.edu. Any questions about the archive or specific files go to weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu, jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

Atari FTP sites (the list is -not- exhaustive)
---

atari.archive.umich.edu [141.211.164.8]

uk.ac.lancs.pdsoft (available to UK users via JANET)

Note: Access is a bit different for this archive site, use the following:

user pdsoft
pdsoft (at the Password prompt)

ftp.Germany.EU.net [192.76.144.75]

ftp.cs.ruu.nl [131.211.80.17]

src.doc.ic.ac.uk

This site has a mirror of atari.archive.umich.edu in /computing/systems/
atari/umich.

:COMP: 93.10.02
Atari-related companies
==========

This is a (still under construction) list of companies and addresses that
might be of use to Atari ST users. Please send me addresses for the blank ones
on this list. See also IAAD, it lists many more companies that are not on
this list.

Welcome to comp.sys.atari.st
============================

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At
present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe,
TT, and Falcon. There are also emulators for the Apple Macintosh and IBM
PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented.
The newsgroup serves as a resource for Atari users ... feel free to
contribute to the discussions.
```

Associated newsgroups include:

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics
comp.sources.atari.st ! uuencoded/shar sources

:ARCS: 93.06.11
How do I deal with Archived files (.ZOO, .ARC, .LZH)?
==========

Files ending with suffixes .ZOO, .ARC, .ZIP and .LZH are archive files. They are binary files which may contain one or more other files in a compressed format. Archive files usually take up less disk space, and for this reason have become quite popular for transferring large files via modem.

In order to extract the files from an archive file, one must use an archive program. Here are the correspondences:

ZIP Use UNZIP.TTP or STZIP.PRG
ARC Use ARC.TTP
LZH Use LHARC.TTP
ZOO Use ZOO.TTP

A few hints for first-time users:

* Most archivers will give a short summary of commands if invoked with no arguments.
* If in doubt, to extract a file, copy the archiver to the directory that the file is in, and run the archiver with the arguments 'x [filename]'.
* If you have TOS 1.4 or higher, and/or a CLI, you can avoid copying the archiver by just changing the current directory to where the file is. See TIPS for a tip on how to do this from the desktop on TOS 1.4 or higher.
* Read the documentation for the archivers you use, they will almost certainly answer all your questions. Documentation is usually included in both the source and binary distributions (such as zoo21bin.zoo).

ARCHIVERS
These programs are all available via FTP from the atari.archive server, in the /atari/archivers directory. Recommended files are:

arc602.ttp - version 6.02 of ARC, includes features to archive subdirectories and also include comments with files.

arc602.arc - contains documentation. UnArc using arc602.ttp.

arc521e.arc - older version of ARC. Used mostly by those who want speed, better compression, and don't care about archiving subdirectories. UnArc using arc602.ttp.

lharc.ttp - version 2.0 of LHARC.

lzh201i.lzh - Thomas Questors lzh utility. German documentation. UnArc using lharc.ttp

stzip22.lzh - STZip, with GUI interface

unzip41.lzh - Old version of unzip

zoo21.ttp - version 2.1 of ZOO

zoo21bin.zoo - ZOO archive includes documentation. UnArc using
zoo21.ttp.

:MSA: 93.06.11
Some info on Magic Shadow Archiver
==================================
(This was provided by Chris Herborth)

MSA Archives

The Magic Shadow Archiver (MSA) is a disk archiving program that allows an entire disk to be compressed into one file for transmission. The Magic Shadow Archiver (in shadow.[arc?|lzh?|zoo?] on atari.archive.umich.edu in ~/Archivers) creates .MSA files, which are often compressed using a normal archiver, such as zoo or lharc.

Magic Shadow is notoriously bad when used on a 1/2 meg ST and only one floppy drive. Its disk access and memory use are very badly thought out, and could result in over 160 disk swaps when unpacking an 80 track, double-sided disk.

Due to the fact that it was the _only_ disk image archiver around for quite a long time, Magic Shadow is the de-facto standard for creating disk images of computer demos and other pieces of software that cannot be easily compressed as files.

Because MSA files are disk images, they can only be used to recreate a floppy disk. There is (currently, see below) no way to extract the files from an MSA archive without writing it to a floppy disk.

Magic Shadow works perfectly with any legal TOS floppy format, even high density disks found in modified STs and most MegaSTes and TTs.

Chris Herborth (herborth@pinot.waterloo.ncr.com at work,
cherborth@semprini.tdkcs.waterloo.on.ca at home,
C.HERBORTH on GEnie) is writing a much more efficient MSA extractor, called UnMSA. UnMSA will minimize the number of disk swaps, and speed decompression considerably.

Daryl Richards (no email address, yet) is working on an MSA-Mounter, which will allow someone to unpack an MSA archive to RAM or a file on a hard disk. This uncompressed disk image will then be added to the system as a logical drive (much the same way a RAMdisk adds a drive to the system). MountImage on the Mac is an example of the way MSA-Mounter will eventually work (MountImage is so good, you can install new versions of the Mac OS using floppy disk images stored on your hard drive).

There is yet another MSA archiver now, called MSA II, by Phillip Lang.

:CLI: ??.??.??
What Command Line Interpreters are available?
==========

There are a large number of Command Line Interpreters for the Atari ST.
Some of the more popular ones include:

gulam the 'classic' cli, somewhat UNIX in flavor

BASH GNU Bourne Again Shell

ksh Korn Shell - available under MINT

gemini MUPFEL is the shell used by the gemini environment

master MS-DOS/Unix mixture, shareware.

okami a German shell with many useful utilities built in

pcommand an MS-DOS-like shell

csh C-shell, standard on Unix

tcsh Enchanced C-shell - available under MiNT

Check atari.archive under /atari/cli or /atari/mint, or check one of the
other FTP sites for files.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on
GEnie in January (of ????) by John Townsend. The original also appeared in
the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA
22170). It has since found its way to me, and is being posted to
comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but
that it cannot be dubbed "official" unless it originates, on paper, from
Atari. This makes sense, as electronic communications are easily
modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and
GEM return codes which appears to be correct. The tables have been modified
to reflect his information.

The following is an unofficial list of the errors that can appear
while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0
Fundamental error.....-1
Drive not ready.....-2
Unknown command.....-3

```
CRC error.....................-4
Bad request...................-5
Seek error....................-6

```

:GDOS: 93.05.05
What is GDOS, and where can I get it?
==========

GDOS stands for Graphic Device Output System (at least that's what my copy of STart, volume 1 number 1 said...)

There is a newer version, called SpeedoGDOS, which should be available commercially from Atari. It is currently included with AtariWorks, and some Falcon packages. SpeedoGDOS uses scaleable fonts - you do not need to create a font file for every point size. There are desk accessories which allow you to manipulate available fonts, and also CPX programs for the newer Atari Control Panel. For those who only have limited memory, a newer version of GDOS is also included with the distribution. For those with investments in older bit-mapped GDOS fonts, they may be used with the new version of GDOS or used as bit-mapped (ie. non-scaleable) fonts within SpeedoGDOS.

You can get a copy of "Everything You Ever Wanted to Know About GDOS (and more)" by Douglas N. Wheeler from the atari.archive server. The file is /atari/programming/gdos.arc.

There is a German version of GDOS available from the atari.archive server. The file is /atari/utilities/amcgdos.arc.

Currently, there are no truly public domain sources for the GDOS system files or font files (at least those supplied by Atari). You can get these files with many commercial programs, such as Degas Elite, WordFlair, etc. You might also want to check your local user group to see if they received a copy of the WordFlair demo program (also available on GEnie). The demo program appears to have the GDOS system and font files.

In the UK The ST Club (2 Broadway, Nottingham, UK NG1 1PS. Tel 0602 410241, Fax 0602 241515) is a licensed GDOS distrubutor:

Catalogue No's:
GDOS-A Driver + Fonts 9-pin
GDOS-B Driver + Fonts 24-pin
GDOS-C Installed system for Opus (9 pin)
GDOS-D Opus 24-pin
GDOS-E FontGDOS + drivers
GDOS-F 300dpi printer fonts

Disks 2.95 pounds each.

:GNU: 93.06.11
What GNU software is available for the ST?
==========

The Free Software Foundation C compiler, commonly known as GNU C (or gcc) is avaiable for the Atari ST. The minimal memory required to do any useful (i.e. beyond 'hello world') programming is 2 megabytes. A 4 megabyte system is recommended.

There is an extensive archive of the latest GNU C programs via anonymous FTP on atari.archive. GNU C is also available at most European FTP sites. The latest version of GCC available for the ST is 2.4.2, this version includes built-in support for C++.

Note that most GNU documentation comes in TeXinfo format. Documentation in this format can be fed into TeX for printing. It can also be processed by Emacs' texinfo to make an info file, which can be viewed on-screen with Emacs' info mode. These two functions can also be performed by the standalone programs 'texinfo' and 'info' (on atari.archive as /atari/tex/tnxf241b.zoo).

The following can be found in the /atari/gnustuff/tos directory of atari.archive: (Note: all of these have Unixmode and MiNT support)

BASH Bourne-again shell
BISON Yet another YACC (Yet Another Compiler Compiler)
COMPRESS Compatible with Unix compress
DIFF Compares files; PATCH does the inverse
EMACS Extreme editor :-)
Fileutils Unix file utilities
FLEX Lexical analyzer, like Unix lex
GAWK AWK report generation language
GCC 2.4.2 C, C++ compiler
GDB GNU debugger, with source level C support
Ghostscript Postscript clone
GROFF Text formatting system
GREP Regular expression search, like Unix grep
MAKE Like Unix make
MAKEINFO Stand-alone system to process .info files
PATCH Changes files from diffs; DIFF does the inverse
PROF Profiles executable code
RCS Revision Control System

SED Stream editor
Smalltalk Smalltalk; object oriented language
TAR Tape archiver like Unix tar

:HAM: ??.??.??
Where can I find Ham Radio software for the ST?
==========

Plenty of Ham Radio software is available for the Atari ST:

Morse code
Radio Teletype (RTTY)
Packet Radio (W0RLI BBS and K9AQ TCP/IP)
Satellite Tracking
WEFAX
Color Slow Scan TV (SSTV)

:LANG: 93.10.18
Public Domain/Shareware languages...
==========
(This section is getting an overhaul, but I don't have the time to finish
the overhaul right now... Sorry, check back next month.)

There are a large number of programming languages available for use with the
Atari ST. Programmers seem to flock to the Atari ST, and if you know of a
language, you can probably find it, or an equivalent, for the ST.

68000 assembler/disassemblers: a68, turboass,
abc
APL
AWK
BASIC
C
C++
cross assemblers (z80, 6502, 68xx,8031/80xx)

Elan
FORTRAN
FORTH
FP
Hope
ICON
LISP
Little Smalltalk
Modula2
OPS5
perl
PROLOG
SCHEME
SIOD
Smalltalk
XLisp
XProlog
XScheme

Check the atari.archive server under /atari/languages. Most other archive sites will have a language directory which you can also check.

:MINIX: ??.??.??
Is MINIX available on the Atari ST?
==========

MINIX is a UNIX-like operating system for the IBM PC, XT, AT, 386, and PS/2, as well as the Apple Macintosh, Commodore Amiga, Atari ST, and later in 1991, Sun SPARC. It is available with all the source code for the entire operating system, the libraries, and nearly 200 UNIX-like utilities.

Demonstration disks for the IBM PC line and Atari ST are available for free via anonymous FTP for people on the Internet. A Macintosh version will be online soon. (If you can't wait, see below.)

To get a free demo disk and the manual, use ftp to connect to ftp.cs.vu.nl (192.31.231.42) and look in pub/minix/demo. The READ_ME file describes the contents of the directory and how to use it. Be sure to fetch and read this first. It contains important information.

If you don't have FTP access, you can buy the demo disk package from Prentice-Hall for $10 by calling (201) 767-5969 or FAX (201) 767-5625. Please DON'T ask me to send it by email. I have quite enough work already thank you. The ordering numbers for Prentice-Hall are:

- MINIX 1.5 IBM demo disk (0-13-582768-x) (in stock now)
- MINIX 1.5 Atari demo disk (0-13-582792-2) (in stock now)
- MINIX 1.5 Macintosh demo disk (0-13-582784-1) (in stock now)

Please note that although the demo disks are available for free on line, MINIX itself is copyrighted software and is not available on line. The demo disks are also copyrighted, but permission is hereby granted to

upload and use them for evaluation purposes. The READ_ME file tells how
MINIX can be ordered.

AS A COURTESY TO US, PLEASE DO NOT FTP DURING BUSINESS HOURS (EUROPEAN
TIME). PLEASE FTP AFTER 11 A.M. EASTERN STANDARD TIME.
If you want to follow the MINIX discussion, read the comp.os.minix
newsgroup, which is quite active and has almost 50,000 subscribers.

Have fun!

Andy Tanenbaum (ast@cs.vu.nl)

:MINT: ??.??.??
What is MiNT?
=============
MiNT is a free multitasking operating system extension for TOS. It is somewhat
like BSD Unix from the programmer's perspective. MiNT can run up to 1 GEM
program along with a lot of character-based programs simultaneously. MGR
and MW2 can both put multiple terminal windows on screen, and bgacc can
put a number of terminal windows on a GEM screen. MiNT and lots of stuff to go
with it can be found at atari.archive.umich.edu:/atari/mint.

TOSWIN is the new replacement for bgacc: it provides lots of nice features like
variable fonts, menus, selectable window gadgets, etc. GEMTERM is a similar
package (it's not part of the standard MiNT distribution) modelled after TOSWIN
and XTerm.

A somewhat interesting note: MiNT is now the kernel of Atari's multitasking
OS, MultiTOS. Originially MiNT stood for 'MiNT is Not TOS', but it's now
'MiNT is Now TOS'. :-)

:XWIN: 93.03.01
Is there a version of XWindows for the ST?
==

There actually is a port of XWindows to the ST now, although it is pricey.
Here's the (slightly hacked up) announcement for it:

X/TOS/window/server and X/TOS/window/server/color

Vendor:
X/software Michael Gehret
X/TOS division
Marktstrasse 8
W-8944 Groenenbach
Germany
TEL: +49 8334 1411
FAX: +49 8334 6245
email: xtosinfo@xsoft.uucp
CPU:
Atari Mega ST, STE, TT
68000 to 68040
Memory:

2 Mbytes (4 Mbytes recommended)
Operating System:
TOS 1.4 or higher
Mouse:
Atari mouse
Graphics:
X/TOS/window/server:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
X/TOS/window/server/color:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
color 320x200x4
color 640x200x2
color 640x480x4
color 320x480x8
Ethernet Card:
Atari Card (Mega or VME bus)
Riebl/Wacker (Mega or VME bus)
Biodata BioNet 100 II (DMA port or VME bus)
Network Software:
Atari/Riebl/Wacker ANS TCP/IP
Biodata TCP/IP
Disk Space:
none (two floppy disks, may load fonts from second disk or font server)
Features:
full X11 Release 5 implementation
Shape, Multi-Buffering, MIT-SUNDRY-NONSTANDARD extensions
PEX extension optional
support of font server protocol
support of X Display Manager Protocol
access control support
compatible to OSF/Motif and OpenLook
high performance (more than 32,000 Xstones on TT)
fast cursor tracking
backing store and save unders support
size of virtual screen limited by memory only, automatic panning
X/TOS/window/server/color supports all video modes at the same time,
including dynamic visuals
loadable key maps (xmodmap format), full support for European keyboard
layouts
3-button mouse emulation with Atari 2-button mouse
may run parallel to GEM (switching with hot key), configurable multi
tasking priorities
about 50 fonts supplied

:DEMOS: ??.??.??
Why won't demo x run on my machine?
==========

90% of the time, if a demo does not run on your American ST, you probably need to be in 50Hz mode to use it. Get a program like 50hzboot.prg from atari.archive to allow this.

:PAINT: ??.??.??
What is the format for [x] paint program data?
==========

There is a periodic posting of ST Picture Formats, edited by David Baggett. The file is on the atari.archive server under /atari/graphics/picfmts.doc.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st mail server. You can also try the commercial on-line services such as GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.) into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st postings. If you aren't reading these two newsgroups, you should consider doing so. You may obtain uuencoded files as e-mail. You can obtain a help file by mailing a message to archive-server@spud.hyperion.com, with the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains a multitude of Atari ST PD and shareware programs. If you don't have access via FTP you can obtain many of the files via e-mail. You should first obtain a help file by mailing a message to atari@atari.archive.umich.edu, with the main body of the message being the word 'help.'. If you are from a uucp site, please enclose this statement also 'path host1!host2!....', where host1!host2!... is your path. Please read the help file completely before you ask questions, and then send any you may have to jon@atari.archive.umich.edu. Any questions about the archive or specific files go to weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu, jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via
via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

```
begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end
```

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

Atari FTP sites (the list is -not- exhaustive)
----

atari.archive.umich.edu [141.211.164.8]

uk.ac.lancs.pdsoft (available to UK users via JANET)

Note: Access is a bit different for this archive site, use the following:

user pdsoft
pdsoft (at the Password prompt)

ftp.Germany.EU.net [192.76.144.75]

ftp.cs.ruu.nl [131.211.80.17]

src.doc.ic.ac.uk

This site has a mirror of atari.archive.umich.edu in /computing/systems/
atari/umich.

:TEX: ??.??.??
Is TeX/LaTeX available on the Atari ST?
==========

The TeX/LaTeX typesetting programs are available on the Atari ST. Check the
atari.archive server under /atari/tex. Fonts and device drivers
(including one for the Epson 9-pin printers) are available on the
atari.archive server.

The latest version of TeX (3.14) has recently been made available on the
atari.archive server. The files are in a subdirectory of their own.

Graham Higgins recently wrote a message in comp.sys.atari.st indicating the
minimum files needed to get a working TeX/LaTeX system up and running on the
Atari ST. He said:

You'll need, at minimum:

The binaries for LaTeX/TeX :StTeXBin
The style files :StTeXSty
The font macros :StTeXTfm

If you want to screen-preview, you'll need screen font files (showdvi)
If you want to print locally, you'll need printer font files (dvifont)

Allow 5Mb.

For a step-by-step article on setting up Tex and LaTeX, send an e-mail request to davidli@simvax.labmed.umn.edu. Be sure to mention 'tex.setup'.

There is also a complete, ready-to-install distribution called CS-TeX. The latest version, 4.0, is available at atari.archive: /atari/tex/cs-tex-4.0. This consists of 8 disks full of TeX stuff, plus an installation program that takes care of the details for you.

==========

Hope you liked the comp.sys.atari.st FAQ. If you have comments, suggestions, more material, etc., mail me at sourada@iastate.edu

Thanks to David Paschall-Zimbel (davidli@simvax.labmed.umn.edu) for compiling most of this FAQ.

Later,
Steven Ourada

Welcome to comp.sys.atari.st
==========

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe, TT, and Falcon. There are also emulators for the Apple Macintosh and IBM PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented. The newsgroup serves as a resource for Atari users ... feel free to contribute to the discussions.

Associated newsgroups include:

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics
comp.sources.atari.st ! uuencoded/shar sources

:MODELS: 93.01.30
All the models in the ST line
==========

This is a pretty complete list of all the ST/TT models and their main features. If you have any additions/correction, of course, send them to me.

Feature key:
CPU's:
8 8 MHz 68000
16 16 MHz 68000
16/3 16 MHz 68030
32/3 32 MHz 68030

RAM:
/1 128kB
/5 512kB
1 1MB
2 2MB
4 4MB
S SIMM slots for expansion

Built-in:
F Floppy
M TV modulator

Extra:
AV 8 bit digital stereo audio, 4096 colors, hardware scrolling, analog joystick ports
MB MegaBus processor-direct bus slots
6U 6U VME bus slots, second serial port
FC Motorola 56000 DSP, 16 bit stereo audio, much enhanced video

TOS:
Highest built-in TOS

Models:
Name CPU RAM TOS B.I. Extra Comment

:FALCON: ??.??.??
What are the specs on the Falcon?
==========

Here's some stuff I culled from the (reposted) Delphi conference with Sam Tramiel.

--- Start Quoted material ---
Here's the specs on the Atari Falcon 030:

CPU: Motorola 68030 running at 16 Mhz
32-bit Bus
Optional 68881 or 68882 FPU
RAM: 1,4, or 14 megs
Standard Atari Cartridge Port
Motorola 56001 DSP chip

Expansion Bus:

Internal direct processor slot for 386SX PC emulation, or other coprocessor

Graphics:

Super VGA graphics: 640x480 with 256 colors
True color 16 bit mode allowing a display of up to 65,536 colors
Accepts external video sync signal to allow high quality genlocking
Overlay mode for easy video titling and special effects
Overscan on TV's and ST Color monitors
262,144 possible colors
hardware-assisted horizontal fine scrolling
BLiTTER graphics co-processor

Sound features:

Eight 16 bit audio DMA record and playback channels
Stereo 16 bit digital DMA input
Stereo 16 bit DMA audio output
SDMA sound/DMA Coprocessor

Standard Ports

SCSI II port with DMA
High speed LocalTalk compatible LAN
Connector for analog RGB color (ST or VGA) or composite video
RS232C serial port
Bidirectional parallel port
MIDI IN/MIDI OUT
Stereo microphone input, miniature stereo plug
Stereo audio out, miniature stereo plug
Two joystick connectors
Two enhanced digital/analog controller/light pen connectors

Data Storage

1.44 Mbyte floppy disk drive
Optional internal IDE Hard Disk

System software

Pre-emptive Multitasking with adaptive prioritzation (MultiTOS)
Inter process communication
NewDesk desktop and eXtensible control panel
Multiple window user interface; number of windows limited
only by memory or software in use.
--- End Quoted Material ---

:ACCEL: ??.??.??
Hardware Accelerators
=====================
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

68000 based: ICD adspeed ST/STe
Fast Tech Turbo T-16 (16MHz)
T-20 (20MHz)
T-25 (25MHz)
68030 based: Gadget by Small SST (16MHz to 40MHz user changeable, 8 SIMM slot
68882 FPU socket, 1 expansion slot, TOS 2.0x).
Fast Tech : Tiny Turbo
Full size version

:TAPE: 93.08.11
Can I use a SCSI tape drive?
============================

Yes, just about any SCSI tape drive should be useable on the ST line. (Of
course, if your computer doesn't already have a SCSI port, you'll need a SCSI
host adapter.) There are at least two freeware/shareware programs that can
help you back up your HD to SCSI tape: TapeBIOS and GEMAR (a German GEM
ARchiver)

:DRIVES: ??.??.??
What should I know about hard drives and the ST?
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

To get a hard drive for ST, STe, Mega, Mega STe or TT(using DMA port):
1. Host adapter (convert the ST's DMA to SCSI standard):
ICD, Supra, BMS are the three major manufature. ICD has very good
software updating support and updates very often.
2. SCSI hard drive or MFM/RLL drive with SCSI adapter:
i). SCSI drive:
Like Quantum Pro80LPS, Seagate ST-xxxN series, they have a 50 pins IDC
connector, and usually say SCSI hard drive or Mac drive. (Any Mac except
Mac128, Mac512, FatMac has SCSI built in, so a drive that works with Mac
usually has SCSI interface).
No other adapter needed, just connect to the host adapter in 1.

ii). MFM/RLL drive:
These types of drive is older and used in older IBM machines. To use
them you need an adapter to convert them to SCSI. Adaptec 4000/4000A
is for MFM, 4070 for RLL drive, Emulex and OMTI also has similar cards
availible. Adaptec has stopped production for quite sometime so look for
these in used/liquidation place. (usually goes $40 to $75 each).

Connect the drive to the adapter (said Adaptec 4000) then connect the
adapter to the host adapter. (said ICD). It looks like following:

```
-------------- ----------- ------------ ----------
| MFM drive |------->|ACB 4000 |------>| ICD |------>| ST DMA |
-------------- ----------- ------------ ----------
```

3. Case, power supply and cabels for the drive system:
Unless you have Mega, Mega STe, TT and the drive is 3.5" so you will put
the drive internally, you will need a case with power supply to house the
adapter and hard drive. IBM case is very easy to get and has a lot of space
for expansion.
For older drive you need about 40 watts each drive, for newer 3.5" drive
they use about 20 watts or less, Quantum LPS drive use about 10 watts each,
make sure your power supply has more than the drives need. Again if you
use IBM case, the 150 watts power supply for that type case can drive at
least 3 drives without problwm.
Cables: DMA cable usually comes with the host adapter.
power cable from power supply to drive usually comes with power sup
SCSI cable from host adapter to SCSI drive or adapter(for MFM/RLL),
it's 50pins IDC female connector on each end with 50 conductors
cable. Should be availible at place you get the drive.
For MFM/RLL drive you will need the usual MFM/RLL drive cable:
(a 34 conductors cable and a 20pins connector, again should be
available at the place you get the drive).

Now, connect them all together. Before power up, check the connection again.
And check the jumper setting on the drive (consult the drive's manual). If you
are using more than one drive with the system, make sure only the last drive
has the terminator (either a DIP or a signle inline package of resistor, which
usually is socketed and close to the SCSI connector on the drive circle board.
Remove the terminator from other drives. [only the last drive should have the
terminator]

Software usually comes with the host adapter, or you can FTP atari's AHDX5
from ftp sites.

:FLOPPY: 93.08.11
Can I use 1.44 meg floppy disks and Flopticals?
==========

1.4 megabyte floppy drives will soon be available from Atari for MegaSTe
and TT machines. If you own an older Atari ST, there is a company which offers
a $199 kit (including floppy) to install and use the drive.

Note that Tos versions prior to 2.05 will not format a 1.4 meg floppy from the
desktop.

Floptical drives (floppys that use optical tracking to get 21MB on a 3.5" disk)
can also be used through a SCSI port. ICD's newer host adapter software (the
'PRO' version) will handle them.

:GRAPHIC: ??.??.??
How can I enjoy enhanced graphics on my ST?
==========

For stock STs, JRI makes a chip which allows a 4096 color palette.
There is also a public domain enhancement that allows 32768 colors on
older STs. This can be found as 32kcolor.lzh on some archives.

There are a number of graphics boards on the market. Here is a first pass
at listing some of them. The information is based on postings by Ben Gilbert
and Jari Lehto.

C32 board by Matrix Datensystem (Germany)
* 800x608, 256 colors
* all ST/TT models
* 256k, 512k and 1meg versions

C75Z board by Matrix Datensystem (Germany)
* 1024x768, 256 colors
* Mega ST or STe, TT VME Buss

(Matrix GmbH has over 15, maybe over 20 with all versions, different
graphics boards available, from hobbyist to professional, from CAD
to GenLock and digitizing.)

ISAC board by Dover Research Company (U.S.)
* 1024x768, 16 colors from palette of 4096
* makes hi-res look like ST low res, just with a huge window
* Mega ST buss
* Dover Research Co. (612) 492-3913

The Imagine by Wittich Computer GmbH (Germany)
* 1024x768, 256 colors
* Mega ST only

(Versions available for all ST/TT models. Several possible resolutions.
Reasonable price, but slow and not very compatible..)

Crazy Dots by TKR (Germany)
* 1024x768, 256 colors
* Mega ST only

(1280x800, 256 colors out of 16.7 million color palette. 1664x1200 for
both 16 color and monochrome. True color option available. Mega ST,
Mega STe and TT.)

reSOLUTION SuperVGA by GengTec (Germany)
* 8 resolutions, 320x200 through 1600x1200
* 16 colors without driver, 256 out of 256,000 with driver
* 1 mb RAM
* uses a standard VGA monitor
* Mega ST or regular ST
* available in U.S. from Rio Datel, 1-800-782-9110, (702) 454-700

(1024x768 is the highest resolution with 256 colors. Driver is called
Multicolor VGA option. Compatible with NVDI and Blitter. Multisync
monitor recommended.)

AlberTT
* like ISAC card, but specific for TT VME buss

MegaScreen
* 832x624 monochrome
* connects to MegaBus
* works with Spectre

Reflex
*1024x1024 with SM124 monitor
*2048x2048 possible with expansion
*usable with most big-screen displays

ODIN by Marvin AG (Switzerland)
* external expansion
* gives TT-resolutions to a regular ST

Cyrel
* RISC-based card
* extremely costly

Here's a few more cards, available from OverScan GbR, Saentisstrasse 166,
1000 Berlin 48, West Germany, ++49 30 721 94 66, ++49 30 721 56 92 (FAX),
++49 30 727 05 6 (Mailbox, language: German)

Autoswitch OverScan for the ST (NO STE compatibility) is DM 129.--, you
don't have to buy a new monitor. The maximum resolution on a SM 124
is variable, but in most cases at about 732*480.
AutoSwitch OverScan TT is a VME board. It's about 249.-- DM, you also can use
your old monitor, but it only works in the TTs five color modes
(3 ST-compatible modes, 2 TT-modes). Resolutions are variable, ask
OverScan about the values for your monitor.
Falcon ScreenBlaster blows up your Falcons resolution to a maximum of nearly
900*600 on SVGA-monitors. It'll be shipping as soon as Falcon030s

become available, and the pricing will be near 150.-- DM.

Graphics cards for which information is sought:

OmniChrome board by Omnimon Peripherals

JRI GenLock

Atari/Lexicor 24 bit color card

Jari Lehto proposed the following recommendations:

Low budget SVGA - reSOLUTION
Professional high-end use Cyrel (or is it Cyrix?)
Hobby or semi-pro DTP Reflex
Hobby DTP MegaScreen
To obtain TT resolution ODIN

A few keyboard questions
========================

Here's how to connect a MegaST-keyboard to a 1040ST:
It's taken from the "ST-Computer" October '90 ('Quick-Tips')

Picture 1

Mega ST-Keyboard cable
(seen from outside)

```
It's no problem to connect * 1
the MegaST keyboard to the ____________ o
smaller computers 520St and ___| | * 3
1040ST. To do that, you only | 6 * | * 4
have to get a 6-pin western | 5 * | * 5
connector plug to be connec- | 4 * | * 6
ted to the keyboard. (available | 3 * | * 7
in Electronic shops) After that | 2 * | * 8
four cables must be connected | 1 * |
with the 'Pfostereihe' (the |___ | 1040ST
plug inside the 1040ST) where |____________| Keyboard-Plug
normally the dazzy original-keyboard
is plugged in. The exact connection Picture 3
is shown on picture 2 and 3
```

Eickmann Computer, Franktfurt

```
* * * * * * * * * * * * * * * o *
18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 1
```

Picture 2 520 ST Keyboard plug (not for You, Jeff)

Picture 3 (Meg to 1040ST) Picture 2 (Meg to 520ST)
MegST MegST
keyboard cable <--> 1040ST plug keyboard <--> 520ST plug

```
6 <--|----> 8 6 <--|----> 1
| |
5 <--| 5 <--|

4 <-------> 5 4 <-------> 14
3 <-------> 6 3 <-------> 15

2 <--|----> 4 2 <--|----> 13
| |
1 <--| 1 <--|
```

****
And now for No.2
****

If you remove the keyboard from the Mega ST and switch on the computer,
the computer won't boot up and send you a series of 'Alert-Beeps'.
If YOU want to let your Mega ST run without a keyboard (FAX-Server a.s.o.)
simply connect a restistor to the keyboard-plug in the Meg and at once
there's silence and he'll do his job!
(Freely translated from Eickmann-Computer by me)

```
6 * 10kj resistor
5 * _____
4 *----|_____|--
3 * |
2 *-------------+
1 *-------------|
```

Mega ST keyboard-plug
(inside-view)

****
And here's another one: This one's about the Hardcopy-function of the ST's
****

Do you hate it - after pressing <Alternate>+<Help> the same time - when
you don't have a printer connected to the parallel port of your ST and
must wait a long time to work again because of the long break taking the
computer to realize that there's no printer connected?
Well, do this and forget about it:

connect the following pins of the printer port of your computer (better:
create a Sub-D 25pin-male-plug an connect the pins on the soldering side):

pin 13 connected to 14 and 15 (all across the plug)
pin 1 connected to 10
pin 23 connected to 11 and 12

****

:JOY: ??.??.??
What joysticks work best with the Atari ST?

The Atari ST works with joysticks with a 'standard' D-Socket. IBM-style
joysticks, Apple joysticks, and Nintendo joysticks will -not- work.

Some recommended joysticks:

Konix Navigator - "best .. if you want to use it for any length of
time"
Gravis - "responsive ... great for games like MidiMaze"
WICO - "strong reed switches, hard plastic and metal components"
Atari - "FAR more controllable and responsive than other, more durable
units"

:MODEM: ??.??.??
What modems work with the Atari ST?

Any external modem should work fine with the Atari ST-series of computers. You will need to purchase or build an RS-232 cable. Be sure the cable is capable of establishing DTR with your modem, as many telecommunications packages check the status of the DTR line. (Ask your local hardware guru if you don't know what DTR is...)

The ST can connect to modems at up to 19,200 baud. Practically, you will purchase either a 2400-baud or 9600-baud modem. The cost of 2400-baud modems has dropped so much in the past few years that you should not even consider a slower modem. Believe me, modem speeds under 2400-baud are going to seem SLOOOOOOW to you!

You will probably need a serial port patch program to use high speed modems on your ST; most versions of TOS have a bug in CTS/RTS handling.

:MONITOR: ??.??.??
What should I know about monitors and the ST?

The monitor is your connection to the ST. Without a monitor, you're typing blind. (Unless, of course, you have an RF modulator on your ST and attach it to your TV set. This is discouraged, as the bandwidth and resolution are pretty terrible for anything other than arcade games.)

There are three monitor choices for those of us owning Atari ST/STe equipment:

1. Monochrome monitors - these include the venerable SM124, one of the sharpest monochrome monitors on the market. Street price is about $150, used monitors should run around $80-90. You can also purchase a 19" monochrome monitor. This gives you a 'big screen' to play around in, and is best for work with DTP and CAD systems. The price is a bit high at $1500+, and you'll need a plug-in board, which is generally set up for the Mega ST machine.

2. Color monitors - including the SC1224 in all of its incarnations (JVC and Goldstar being the primary vendors). The newer monitor, the SC1435, has a 14" screen and stereo sound.

3. Multisync monitors - these monitors provide monochrome and color access in one monitor. The street price is around $450, about $100 more than a standard Atari color monitor. You need to reset your computer to change resolutions. In many cases, a nice little switch box is provided (or you can build one) which does this for you. Examples of multisync monitors include the OMNIMON RAINBOW MONITOR.

There are any number of monitor choices for those owning Atari TT equipment, although they all boil down to 'multisync VGA'. There 14" color VGA monitor from Atari is quite nice, as is the 19" monochrome monitor. Any standard 14" multisync VGA monitor will do as well. Forget moving your SM124 or SC1224 monitor to your new system, the cabling and electronics is just not going to work.

:PCEM: ??.??.??
How can I turn my Atari ST into a PC emulator?
==========
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

Supercharger is the only external PC emulator with 8MHz V30 and 1MB RAM in a nice lunch box. It connects to ST's DMA port and defaults as device 3. It's powered by external power supply. Has 8087 socket and one expansion slot. The 1MB RAM can be used as RAM drive by ST when the IBM side not used.

:SPECTRE: ??.??.??
How can I turn my Atari ST into a Macintosh emulator?
==========
(Thanks to Wayne (trek@ihlpb.att.com) for this info.)

Product: Spectre GCR from Gadgets by Small, Inc
40 W. Littleton Blvd
#210-211
Littleton, CO 80120
Retail: $299.95

Description:
The Spectre GCR is a combination of software and hardware that allows the Atari Mega/ST/STe/TT line of computers to emulate an Apple MacIntosh Plus(tm) Computer. The emulation is so good that most Apple software runs out of the package using your Atari Disk drives to read in the Mac software. It does all of this while running 20% faster than the program would on a MacIntosh Plus and provides you a 30% larger screen area.

The Spectre GCR is a combination of software (written by Gadgets by Small, Inc), a cartridge (also from Gadgets), and a pair of 128K Apple ROMs (from either a MAC 512kE(tm) or Mac Plus - part numbers 342-0341 and 342-0342 which you purchase separately from an Apple source.) The Apple ROMs can currently be purchased for around $150. MacIntosh documentation and software, including the operating system (referred to as System/Finder), are also required to round out the package.

The Spectre software is currently at release Version 3.0. Gadgets supplies fairly frequent updates to allow you to keep up with the Apple OS releases. The Version 3.0 update retails for $20. Version 3.0 supports 15 of the 128K OS releases up to, but not yet including System 7 releases.

Spectre software supports Mac formatted disks (including formatting your own) with your Atari drives, Mac sound, large screen displays (1280x960) Mac harddisks via SCSI through a Megatalk board (retail $299.95 from Gadgets) or through an ACSI-SCSI host adapter (my Syquest works beautifully- and

the excessive use of disk accesses in Mac software will have you wanting
a hard drive). Spectre 3.0 also supports DOS Mounter and Apple File
Exchange if you are needing MS-DOS data disks for Mac work. Language
configuration support, keyboard support, A4 paper size support for
Lasers have also been added to 3.0.

Running Spectre:
The feeling you will get when you see your Atari transformed into a
MacIntosh with a decent screen is indescribable. The extra flexibility
that you get will also make you feel more confident in the greatness of
your Atari. You will also get to see some of the frustrations with one
of the other sides of the fence - frustrations like excessive disk access,
remembering not to remove/change a disk unless the OS tells you to, etc.

Speaking of changing disks, there are major differences in the operating
philosophies of an ST and of a MacIntosh. You really must read the
documentation that comes with the Spectre GCR (and I for one found that
a real delight. Dave and Sandy have a very different approach to software
documentation that makes it enjoyable reading.) You should also read the
Mac Operating System docs. One other reference you may need if you are
going to do much with Mac software is one of the reference manuals
referred to as the MacIntosh Bible.

If you ask an Apple dealer if a particular piece of software runs on
a GCR, don't figure you will get a straight answer. They won't know.
The current compatibility list from Gadgets lists about 450 programs
and their release numbers that have been tried and found to work with
Spectre GCR. In general, if a piece of software won't work with the GCR,
it is probably becuase of copy protection. Most serious Mac software is
not copy protected.

One last note - earlier versions of the emulator exist that were not capable
of reading Mac disks directly. It's a capability you will want.

(Thanks to Shoou-yu Tang (sytang@lamar.colostate.edu) for this info.)

Spectre GCR is the best availible, you need to obtain a set of 128KB ROM from
Apple (they are used in Mac 512KE and Mac Plus, noted that Mac512 use older 64
KB ROM which is not good) to fully utilize the device. Also it's recommanded
to use it with MONO monitor and at least 2MB RAM. The Spectre software takes
about 300 some KB of memory, so on a 1040 there is not very much left for Mac,
especially after the Mac system is loaded. 4MB memory and MONO is best.
It can read/write Mac disk direct using ST's drive (double side drive, as most
Mac drive is double side). With DOS mounter or software like that you can read
/write ST, IBM disk from the Mac desktop as well (don't try to run the ST, IBM
binary. It's only for file transfer). Or you can use Apple File Exchange to
read/write ST, IBM disk.
Syatem 6.0.5 runs fine, system 6.0.6, 6.0.7 runs also. But system 7 will not
run with it.

:UPGRADE: ??.??.??
Can/should I upgrade my ST?

The answer depends on the type of ST you currently have, and what you want to do in the future. Be aware that there are a large number of modifications one can perform on the venerable 1040ST, and that newer machines are coming down in cost so much that to obtain a certain feature it may be cheaper to purchase new than to upgrade.

1. Memory - most ST machines may be upgraded to 4 megabytes. The newer STe machines use either SIP or SIMM

2. TOS - for those still running TOS 1.0, now is the time to consider an upgrade. TOS 1.4 has been around for at least 2 years now, and is -much- faster (and safer) for those using hard drives. TOS 2.06 is available as a hardware upgrade to ST and MegaST machines for about $150 from CodeHead

3047. Mega STe/more for sale

Newsgroup: comp.sys.atari.st
Date: 1993-12-06 16:16:51 UTC
From: L676791@LMSC5.IS.LMSC.LOCKHEED.COM
Message-ID: <93340.29811.L676791@LMSC5.IS.LMSC.LOCKHEED.COM>
Source record: 197211

The following package is for sale. Sorry, can't offer items individually.
Atari Mega STe w/4 MB RAM and 50 MB hard drive & TOS 2.06. Includes SC1224
color monitor and SM124 B/W monitor w/A-B monitor switch. Computer has
1.44 MB internal floppy and external (drive B) 750K floppy. Package also
includes Atari Modem (900 Baud) and all cables, including two MIDI keyboard
cables. Included is Spectre GCR Mac emulator w/ROMs and System 6.08 operating
system. Software, w/documentation, includes Word Writer, Psion Chess, Strike
Eagle II, Epic, Chord Magic, Rhythm Time, Note Wizard, Scale Master, Tiger Cub,
Take Note, and ECS Keyboard Speed Reading (plus some others I can't remember
right now). $1,000 firm takes all. Also available cheap - Olympia Compact
RO daisy wheel printer (all configured to work with this system). You pay
all shipping.
If you're interested, E-Mail or call me:
Mark van Wyk (408) 739-0541
(Sunnyvale, California) - leave message if I'm not in.

3048. Items for sale

Newsgroup: comp.sys.atari.st
Date: 1993-12-06 18:05:24 UTC
From: d3hq@jupiter.sun.csd.unb.ca
Message-ID: <1993Dec6.180524.11831@jupiter.sun.csd.unb.ca>
Source record: 197232

Unfortunately many of the people who place items for sale in this news group fail to mention what currency they are selling their items in. This can lead to confusion on the part of the buyer, as recently happened to myself. Is there a simple way we could have the news reader program convert the amount shown to the local currency? This program would have to consider the current exchange rates, which is what screwed me last time (I didn't realize $28 US = $42 CDN).

Peter Green

3049. Demo of Minter's Hardcore

Newsgroup: comp.sys.atari.st
Date: 1993-12-06 18:19:17 UTC
From: boyd@hardy.math.fsu.edu
Message-ID: <2dvt35$o35@mailer.fsu.edu>

After playing the 5 level demo of Hardcore, all I can say is "Wow".
Extremely cool for shoot'em up fanatics. It put me in a zonked out
"be the ball Johnny" state much faster than any other arcade game
I can remember. Highly recommended! The finished version should be
unreal.

I'm pretty sure it is on atari.archive.umich.edu. If not, I'll stick it
there. Thanks to the kind soul that emailed it to me.

I second this. This is a great program, and seems to allow significantly
faster Zmodem usage on my Mega2 (than Serial Fix 2.x). I just stuck it in
my auto folder, and it works fine. However, what little I can decypher
of the doc file indicates that one can expand buffers and configure different
behavior in the program (ger2eng produces some really hilarious results with
this file, by the way).

Anyway, could some bilingual person please translate the doc file and post
it?

Cross-posted to: ont.micro,kw.micro,uw.sys.atari,comp.sys.atari.st,comp.sys.atari.8bit

In December, the Kitchener-Waterloo Eight Sixteen Thirty-two (KWEST)
Atari user group will have a general meeting.

Our 16-bit library currently has over 400 disks of public domain
and shareware software.
In addition, there will be our updated catalog disk and our
disk-of-the-month.
Our 8-bit library is also available at this meeting.

As well as our own newsletter "The Hard Copy", we hope to also give
attendees the November issue of AtariUser.

The group welcomes new members and visitors with
8-bits, 16-bits, or those just curious.

Meetings held at the University of Waterloo in the
Math & Computer Building.

Room opens at 7:00 pm. Meeting starts at 7:30 pm.

Wednesday, December 8, 1993
DCS Course Room, Room 2009 (2nd floor)

Call 725-2068 for more information.

Hope to see you there,
Dani Roloson

3055. Re: Is Atari Explorer dead? !!!

Newsgroup: comp.sys.atari.st
Date: 1993-12-06 19:22:57 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <93340.142257STIRRE31@MAINE.MAINE.EDU>
Source record: 197227

Yes, Atari Explorer is dead....for now anyway. Bob Brodie
said that the magazine could come back after the introduction
of the Jaguar, but who knows? I, too, am a subscriber. I
attempted to get a refund for Atarian Video Game Magazine
(anyone remeber it?) which was also produced by Atari,
but had no luck. I am surprised that a company like Atari,
which only has 2 magazines devoted to it in the US would
choose not to produce a magazine, even at a loss. The other
magazines are hard to find at bookstores, whereas Explorer
used to be at local newstands. It is good advertising.
Anyway, keep your fingers crossed and hope for it to
return. It really is a great magazine (was). If you
want to subscribe to reliable magazines, try ST Informer
or Current Notes. They've both been good for me.

Hahahaa....I don't know if someone into MIDI actually needs a MEDUSA T40, but its the fact that you can run it that makes it interesting. I mean lets face it. Faster, more powerful is considered only to be for the better :)

But, for Graphics, rendering, animation, coding and developing it is a veritable dream! Simply because this thing operates at around 26 Mips or so.

Atari Falcon'040 is not released, and as usual Atari is not replying to any
questions about that. There are Clones for Atari that have an '040 processor,
you might like to check it out.

It's known as the MEDUSA T40

>Gavin

Do you know what the ADFS directory structure is?
My ADFS (Solidisk) allows password protection of directories. Does anybody
know what the decryption algorithm is?
I would like to write a program to write to ADFS disks, so I would like to
know what the structure of the ADFS's FS Map (FAT) is.

(Has anybody noticed the staggering similarity between the addresses of
"Solidisk Technology Limited" and "Solid Disk"?)

Please mail me direct as I don't have access to the University's computers
over the Christmas vacation (8 Dec - 11 Jan).

>through the software consumer world and making life miserable for software
>vendors everywhere.

No argument there. :)

>consumers are realising that most software is not worth the asking price.

And ATARI software developers are realising that it is just not worth their time to program for the Atari anymore with attitudes this rampant. It takes roughly the same amount of work to develop a Windows/Mac application as it does for the Atari. If 10 copies are pirated for every legitimate copy sold (a conservative guess, of course) but the PC/Mac user base is THOUSANDS of times larger than Atari's, which platform would YOU program for? This is the reason piracy hurts Atarians MORE than it does PC and Mac users.

>if software was handled like other consumer products, there would be
>more software tried and a lot less software sold.

Yawn. We've heard it all before, Eric. If ALL Atarians were as conscientious as you claim to be, it wouldn't be a problem, would it? Developers could send out full versions of their software for free, or just for the cost of the media, on a "buy it if you like it/format it if you don't" honor basis. The trouble is, in the REAL world, it just doesn't work that way. Don't get mad at the developers... get mad at the pirates who make life tough on us all.

Slice it and dice it all you want, but theft is still theft. End of story.

In article 210914@helix.nih.gov, rvenable@helix.nih.gov (Richard M. Venable) writes:
>
>I tend to agree; selling buggy software with no refund is piracy by the
>software companies ...

I wondered when Mr. Venable would enter into this discussion... :)

Truly buggy software shouldn't be sold, granted. It's not right, but it's not piracy, either. And I fail to see the argument against limited demo versions of most products. If a demo game only has 3 levels (instead of 50) or a demo app doesn't let you save a project file, do you really mean to say that they won't give you a good "feel" for the product? Some demos are lame, sure, but all???

>if the the software is high quality, and reasonably priced, I might buy it.

Great. But do you mean by that that if the software is expensive, will you steal it since you think it's overpriced? Or if you think it's low quality you will steal it to teach the developers a lesson? So all we have to do to eliminate piracy is to provide high quality software at very low prices??? Gee, what a wonderful (and ridiculously utopian) idea!

>I wish developers would pursue program bugs with the same relentlessness
>they seem to lavish on guarding against piracy; perhaps I wouldn't feel
>so victimized by the piracy of software companies themselves.

Has _every_ piece of software you ever bought been so horribly buggy that you felt you deserved your money back? If so, you HAVE had some bad luck! I guess I've been fortunate in that the vast majority of Atari software I've bought has been quite up to par, or at the very least, functional.

You keep dumping on the developers but I think your angst is misplaced. It's the actions of the PIRATES and yes, those that turn a blind eye towards piracy, that have forced the situation we all are suffering through now. Granted, Atari's mismanagement hasn't done much to benefit sales, either. :)

If you want to help remedy the situation, then start by refusing to ever make or accept an illegal copy of software again. Spurn those that try to give you illegal copies. Tell them how it hurts the industry and most importantly, you as the user. Do not frequent pirate BBS systems and if you do find a BBS with pirated software, politely inform the sysop how much you disaprove. YOU can make a difference. The question is, do have the courage to do so???

Apologies to those who are tiring of this discussion but I will not sit idely by while piracy, even in its milder forms, is promoted on the net. Sorry.

>but my info on BICS seems to be in flawed.
>
>Anyone know anything on BICS? Like how to print a space??

Nah, the binding is hosed... the original concept was that we'd turn
ANSI wide characters into a 16 bit type which would then map beatifully
onto the Speedo set, hence the ...wc... binding names (at this point
in time the Compendium wasn't published & the Atari docs made no
suggestions as to binding names). The first copy of the Compendium arrived
just as I was doing a final VDI library sweep & I just tossed in the
bindings, w/o (I'm afraid) really reading the stuff.

As far as ANSI wc stuff goes a wc string terminator is L'\0', so mapping
this onto a 16 bit zero seemed sensible, not least because the only
character set documentation we had on Speedo was 'borrowed' of another
Speedo OEM who we were friendly with (and who was willing to break his
NDA - yes, the character set is NDA'd...). Anyway this character set stuff
implied the Bitstream character ID view of the world, so we figured we
were OK - dumb move, why would Speedo use a font independent method..?

Anyway I plan on keeping the ...wc... variant as is, and fixing the ...16() variants (which I did today); the READ.ME now says use the 16s, not the wc...s

>Oh, the main reason I want 16-bit text was to get proper typographical
>quotes and dashes, you know, like the Macintosh. I doubt there will be
>a speed penalty using 16-bit characters, considering the binding for
>8-bit characters!

It should be much faster; you now just get pointer twiddling & no copying.

>PS: did the documentation on global constructors/destructors fall out
>of the word processor Alex?

Errrm, yes... I don't know quite where it went, I'm sure you've figured this, but the magic prefixes are _STI and _STD which the linker then massages into a jump table.

Yes. This is why I'm now only going to develop GEM programs. Developing machine-specific programs (such as Graphical GNU Chess which only ran in ST Low resolution) is too much work for too little compatibility.

If anyone has any burning desires for features, let me know. Only user interface things though - I'm not changing the GNU Chess engine at all. Currently it gives a 2D board display with configurable icon size and colour. I can't really think of anything else to add.

HELP!

I have several Amiga fonts that I need to convert to the GEM font format.
Does anyone know of a program that will do this conversion???

How about a program to convert from TrueType fonts to GEM fonts?

Failing that, where can I find a good technical description of the GEM
format, so I can write my own?

As a last resort, how about a good source of ftp'able GEM fonts?

Thanks for any and all help!

I noticed GNU C v2.5.5 has just been stuck on a.a, a 1.2meg ZOO file.

Files that big, surely the program with the best compression would
be used, as downloading that much ain't cheap! (Eventually....)

Why not Lh5 it!? (Lharc 2.32 is blindingly fast, and is getting to the
stage of having all the options ZOO does.)

I don't want to start (another) archiver war, but on files 1meg+ - using
such old methods is a bit pedantic!

Atari decided this during spring '92. True Type *did* exist, and there
were Adobe Type 1 scalers available.

3086. Formatters / Copiers for Falcon.

Newsgroup: comp.sys.atari.st
Date: 1993-12-07 05:58:10 UTC
From: karlm@highett.mel.dbce.csiro.au
Message-ID: <2e161i$1um@news.dmpe.CSIRO.AU>
Source record: 197167

I was Un-MSAing STNEWS 8.2 the other night, and realised that MSA won't format 11 sector disks. No problems, just whip out old FastCopy. Don't work. Try Megaform. Don't work.
Now is it just me, or is every program that copies/formats (apart from the desktop) broken on the Falcon!?
I really would love to copy some disks ...

Also, why oh why did Atari do such a dumb thing as to not put a HD-Disk detect in? Formatting a 720k disk to 1.44mb is StUpId!

Best Regards,

Karl.

Isn't there a program which reconfigures an ST (Mega 4) running TOS 2.06 to act like one running TOS 1.0 or 1.2? I found a few old programs that now give bombs on TOS 2.06.

I vaguely remember that such a program exists, but do not remember its name, or where it can be found.

Thanks in advance,

2.5.6 is already out due to "major bugs" in 2.5.5.

3089. CoNnect 2.xx registration help!

Newsgroup: comp.sys.atari.st
Date: 1993-12-07 08:49:03 UTC
From: aykrua@acad2.alaska.edu
Message-ID: <1993Dec7.044903.1@acad2.alaska.edu>
Source record: 197182

Help me with CoNnect, please?

I need to find a good program that handles ZMODEM and does VT100 (at least) to comfortably access my university VAX system... I've been using Uniterm, but it has no ZMODEM. None of the .ttp ZMODEM programs are an elegant enough solution, because none of them seem to work from the 'Run Program' menu item of Uniterm 2.0e (the version I have)...

So the question is- how does somebody in Alaska buy a copy or even register a copy of CoNnect 2.40??? The latest 'shareware' version I've been able to find (on wuarchive.wustl.edu) is 2.10 with patches/upgrades to 2.20 in the same area (in the Telecomm subdirectory)... does archive.umich.edu have a newer one to ftp? Also, if not, back to the original question -- if I'm way the heck up here in Alaska (not a single dealer in the entire state to my knowledge), can I still register my older version and/or get the upgrade to 2.40 by sending $50 to the address listed in the archived docs?

Michael Baffoni
2493 Beechwood Dr. <----- Still valid for U.S.A. registration?
Paso Robles, CA. 93446

Or should I be scrounging/saving up the deutchmarks???

BTW- I've never actually gotten either version of CoNnect to work, they do almost everything except DIAL the number... either I'm doing something wrong (most likely scenario) or these truly are 'demo' versions. That's too bad if it is the latter case, as I'd like to see how it *really* handles VT emulation, an absolute requirement for using the mailer on our VAX. (It uses TPU as a full screen editor and strict adherence to VT must be there to make it simple, otherwise I'm stuck with EDT - line editing! Welcome to the dark ages of computing, eh? No more igloos, but they still use 20 year old text editors on a VAX! Go figure. A month ago they just figured out what gopher and archie were up here... sheesh!

Yes, that's right. I have found a nice replacement for FCopy on the Falcon:
Get HCopy (for example on ftp.uni-kl.de) or the commercial followup ECopy.
This will work if you set the HD-switch on TT/STE.

Ciao, Heiko.

Your best bet is to get a Beeb, link it to the ST via a serial lead & copy it
across via a comms package.

KM>board, etc., but I am yet to find a place which sells it here in Australia
KM>(maybe something to do with it's German Language ...)

There are few Atari hardware articles in c't now, and some aren't very good.
The IDE/TOS 2.06 card is OK, and the PAK (68030/68881 board) is well done, too
- but there were some articles (like TOS 2.05 in a normal ST) which could make
you laugh (cut BERR instead of creating a proper DTACK etc.).

There are interesting basic articles on topics like morphing, compression,
raytracing, etc. - that's mainly why I still read this magazine.

It works for me. Are you sure that you have really anything
physically located after MiNT? Or, you have renamed MiNT to
something other than mint.prg or mintnp.prg.

[flameproof suit on]

Because Lharc is still incompatible with everything (like MinixFS),
and would only give you <1% improvement, if at all.

If you want real good compression and maximum portability, use GZIP!

3099. Using an old Protar host adapter with a new Hard Disk

Newsgroup: comp.sys.atari.st
Date: 1993-12-07 11:57:37 UTC
From: adw@ukc.ac.uk
Message-ID: <7015@eagle.ukc.ac.uk>
Source record: 197173
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I am trying to use a second hand Protar host adapter to attach a SCSI
hard disk to my ST.

I am having difficulties caused (I believe) by the fact that the hard disk has
not been formatted in advance for use with the Protar adapter.

The software I have for the adapter (Progate manager v4.0) doesn't seem to want
to recognise that there is a hard disk present (to allow me to format it).

So, does anyone know if what I am trying will work?

is there software for formatting a hard drive that will work through a
protar host adapter?

does anyone have a newer version of the Protar software that will work in
this case?

what else can I do (short of buying a new host adapter)?

Lloyd.

P.S: I have tried other software (the closest to working of which was the hdx
part of ahdi which at least caused the drive select light to turn on - but
nothing else).

3100. Re: Populous on the Falcon030

Newsgroup: comp.sys.atari.st

Source record: 197089

I have run Populous II on my Falcon too. It does work but I was
told to run it from low resolution and from floppy. To run it from
a hard disk you need to reboot the machine from Backward 2.23
without the HD (hold ALT down).
Then invoke AHDI.PRG from a floppy to load in the HD driver and
then run Populous II from Hard disk whilst your in Low Res.

I ran it in 16MHz with 16Mhz Blitter and it is storming.

-Andrew

Disable the cpu caches with xcontrol and most of them will work fine.

> in? Formatting a 720k disk to 1.44mb is StUpId!

I find it it works perfectly. Fcopy marks the marginal sectors as bad like
for a hard drive and then they work fine. I haven't had any problems with DDs
formatted to HD and I have been using them since about March...

3102. CLA v2 RELEASE ANNOUNCE

Newsgroup: comp.sys.atari.st
Date: 1993-12-07 12:18:47 UTC
From: Craig.Graham@newcastle.ac.uk
Message-ID: <CHnzJD.Dr@newcastle.ac.uk>
Source record: 197177

```
================================================================================
CLA
DIGITAL LOGIC DESIGN & SIMULATION ENVIROMENT
Version 2 Release 1
================================================================================

Release Date: 6/12/93

After a rather prolonged delay, (over a year), CLA LOGIC v2 has now been released.

Here is the specification of this, the Version 2 Release 1 edition of the system.

- MultiTOS friendly (Xacc2 support coming soon as well).

- Full GDOS support (for printed output), with a choice of GDOS or custom vector
fonts in printed output.

- .GEM Metafile output of schematics & simulation results for inclusion in
documentation (GDOS/NVDI/FontGDOS/Speedo)

- A whole new GUI, with flying dialogs (in a window of course), roll-up toolbars,
pop-up & pull-down menus, multiple editor windows, and more....all fully
GEM'ed & MTOS happy. TOS4+ is supported. If you've ever used Motif or
MS windows, then you'll appreciate this.

- Multi-window editor allows you to work on many blocks simultaneously, either
using a scaled-to-fit view, or a scrolling window.

- Selectable drawing scale & page size (individual to each block).

- Falcon/TT/STE/ST compatible - tested & working :)

- Works in Colour, but a minimum vertical resolution of 400 is needed, so a
virtual screen driver is needed on ordinary ST/STE's to use colour.
(eg Monster)

- Support for Falcon extended GFX modes (ScreenBlaster, etc), and TT video
cards such as the CrazyDots Card.

- Better gate level editting (Move gate, rotated gates, etc).

- Improved Display quality (proper arcs & circles) & speed.

- Full hierarchical structuring of designs with easier block traversal.

- User definable keyboard shortcuts for all functions.

- User edittable gate representations, via a newly written vector object
editor.
```

- Interactive simulation, with the following tools:
o Multiple 20 trace logic analysers
o 'Active' probing
DISABLED o Monitoring bulbs, for those 'quick little checks'
o Variable simulation resolution.
o Auto clocking inputs at definable frequencies
o Manually setable inputs for interactive simulation
o Multiple Word Generators for batch simulations

The simulation functions are fully integrated and accessable at any time.

- Library module facilities:
o Predefined libraries
o Library module loading.
o Design merge
o Proper (new) Librarian program for maintaining libraries

- VHDL support. A (very limited at present) subset of VHDL is supported for textual design, in the form of a seperate compiler which produces CLA blocks which may then be inserted into designs.

- A seperate (for now) Finite State Machine editor which produces PALASM code for your design so that you can actually design real chips.
(Only supports the 22V10 directly at the moment). Also outputs .GEM files for documentation purposes, and gives detailled reports of how the FSM has been implemented in the PAL, including:
o Device Pinouts
o Output Equations and States
o State Equations
o Input Variables & Transistion lists.
All on top of the PalAsm source code (there is a PD version of PALASM for the ST called PASSM which can then be used to produce JEDEC files for programming PAL's with. This is the first of the device synthesis modules for CLA, but will not be the last.

- Fanout checking has been removed & will now become part of an upcoming EPLD Synthesis Tool for CLA designs.

- Maximum number of Gates : 10,000

This was a summary of some of the nicer features of the program. There are many more features actually in the package.

SYSTEM REQUIREMENTS:

- Basic System
This is a real minimum, a hard drive & NVDI are recomended as the speed of the system on this set up will not be good, and the screen area will seem very cramped, with no room for toolbars & analysers.
o Atari ST
o 2 Meg memory (minimum - more is needed for large designs).
o Double sided floppy.
o 640*400 Mono Monitor

I have been informed that the speed on a machine without NVDI is simply unusable.

- Our System
This is what we develope on (and in future, for). Although we test with multiTOS, it tends to slooow thiiings dooown in practice, so we don't use it.
o Falcon 030
o 4 Meg memory
o 65Meg Hard drive
o SVGA Monitor + extended screen drivers (800*600 16 colour).
o NVDI + WINX2.1

- Ideal System
This is what we'd like to have, but cann't afford.
o Atari TT
o MultiTOS
o Loads of memory (8Meg +)
o Hard Drive
o 19" Monitor.
o NVDI

Where Can You Get It ?

CLA2 has been uploaded to atari.archive.umich.edu & ftp.uni-kl.de.

PLEASE NOTE THAT CLA IS SHAREWARE......AND MANY EXTENSIONS WILL NOT BE MADE AVAILABLE VIA FTP (such as the Extended Finite State Machine Designer & EPLD Synthesis Tool).

>I didn't buy one but I might...
>
>Andy D.M.

A video game shop in Manchester advertised them in the shop window, and were taking orders. I went in to ask how much and was given a price of 250 pounds, being told that it depended on the exchange rate.

I haven't been into Manchester to look around the shops. I was just passing through this side street, and came across this. So, I don't know if HMV and Virgin will be selling them.

Also, in London, in a computer exchange shop, I saw a 3DO, selling for 700 quid. I think that a lot of people will go for the Jaguar, if only for the cost (even though the Jag is a better machine IMHO)

Danny.

How the heck am I supposed to download that onto a 720K floopy at college which I can then take home and install from my 720K floppy disk on the Atari?

Maybe download into my account, uuencode, then split the file. Is that it? But why not just have it like that in the first place. Do many users use 1.44 meg floppies nowadays, and I'm the only ione left with a 720?

When I looked, I didn't see an ST binary, only MS-DOS and MS-Windows version\s.

True, unfortunatly, but I have uploaded an uemacs312.zoo to a.a.u.e.

I brought the code in only to find that it would not compile with Mark
Williams C V2.0. (Although I did manage to get it built under VAX/VMS and
OpenVMS AXP.)

I haven't got MWC 2.0 anymore, so I can't verify nor fix that problem.
I use MWC 3.0.5 which works fine. There is at least 1 bug and fix for
3.12 on VMS. Can't give you more details because I lost interest in
VAX/VMS and consequently don't keep track of MicroEMACS events on it.

The documents that come with the distribution state that for a $25 fee, you
can get an up-to-date binary and printable documentation. I sent a check
about eight weeks ago and have heard nothing....

I know Daniel Lawrence is very very busy with lots of different
things, but I agree that 8 weeks is a bit long. I suggest you drop him
an email.

Below I have included the readme.1st of the uemacs312.zoo.

Ed M. van Gasteren,
ed_m_van_gasteren@ns-nl.att.com

--

This is a partial distribution of MicroEMACS 3.12 for the Atari.

The best place to get more of the whole package is dist/uemacs312 on
midas.mgmt.purdue.edu. That is where Daniel Lawrence puts it. But you
will not find an Atari executable there. So here is one!

I will continue to work on MicroEMACS, particularly the Atari part of
it. If you have questions, remarks, suggestions, bugs, fixes ... then
don't hesitate to contact me.

Ed M. van Gasteren,
ed_m_van_gasteren@ns-nl.att.com

- emacs.prg

I used Mark Williams C version 3.0.5 to build it from ue312dev.zip and the few changed files you find here. I have found no problems, but plenty warnings, in the building process.

- estruct.h

Configured appropriatly.

- word.c

Fixed delete-previous-word. It deleted the wrong part of the buffer.

- input.c

The common routine for buffer, file and command name completion was not re-entrant. I had a problem with that in a rather complex $exbhook.

- st52.c

-- Removed several local #defines in favour of those provided by MWC. Substituted some hardcoded numeric values and (x)bios calls with #defines.

-- Obtain the size of the whole screen (WF_FULLXYWH) iso of just the work area (WF_CURRXYWH). My 1040 STf with TOS 1.4 and my Falcon with TOS 4.02 returned different values in the latter case. That resulted in not being able to get to the desk menu on my Falcon.

-- Initialize the number of rows and columns better to use the whole screen and to adjust better to different screen resolutions.

-- Open a full screen window inorder to be able to get back to MicroEMACS by clicking in it (after you went someplace else).

With MiNT/MultiTOS it appeared that I needed a window handle anyway to determine if mouse button events and such stuff were for MicroEMACS.

-- Handle some of the window change related messages in combination with mouse control better. Before you had to click on a accessory in the desk menu sometimes more then once to get to it.

-- Removed the first/second mouse handler stuff and the event queue that came with it. There is no need for stmouse.s anymore.

With MiNT/MultiTOS you simply can't get away with grabbing the mouse vector because you don't alwasy 'own' the mouse.

-- Mouse button events with shift, ctrl and alt now return the proper key code.

-- Mouse move events implemented.

> reasonable price.

There is an ad in this month's Current Notes advertising ST trackballs.
They are $29.95, with free shipping through 12/31 (they were $10 less
until October, bummer). It appears that they are converted CX-80 Atari
trackballs. You can also get a pool ball for an additional fee. Current
Notes did a review of them, and claimed they were high quality stuff (better
than the Kraft and Best Electronics units, and cheaper to boot). You can
order them with any button placement you desire.

The address is:

MTS Creations
P.O. Box 56762
Chicago, IL 60656
(312) 763-1822

If you just want a mouse, and cannot locate a used unit, Toad computers has a
selection of them (1-800-448-TOAD).

3109. M-Disk to X-Disk?

Newsgroup: comp.sys.atari.st
Date: 1993-12-07 14:36:12 UTC
From: saj@chinet.chinet.com
Message-ID: <CHo5wD.6t2@chinet.chinet.com>
Source record: 197108

I just looked at M-Disk which came with CS-TeX. Looks real interesting,
but I have a little problem for which I hope there's a quick fix (your cue).

When M-Disk installs a RAMdisk, it always makes it drive M. I have a physical
drive M, so I can't use the RAMdisk. A quick scan of the documentation
didn't give me a workaround. What I'd like is either a convenient way to
change the drive assignment of M-disk, or an easy and reversable way to make
the last partition on a CDC-Wren SCSI drive attached to a Falcon be unreconized
(that's M: It's infrequently-used stuff, so difficult access is acceptable.
It's a pretty big partition, though, so I'd hate to lose it completely).

I'll just throw my 3 cents in as well (inflation :-) He might be talking about something like PGP ("Pretty Good Privacy") which just by my casual reading on the nets is supposed to be a means of encrypting a message so that only the intended receiver can easily decrypt it.

There should be an Atari version, as well as a PC version (and others), probably available at wuarchive.wustl.edu and your other "friendly neighborhood FTP sites" :-)

You might look into getting a IBM-compatible serial mouse (assuming you have a free serial port). I believe I've seen a driver that will let you use one of these mice as a normal Atari mouse (and with the price of PC mice around $20 for some brands, it might be worth looking into). But you might want to track down the driver before you buy one though...

I have dialed into the VAX at my place of work and the VT emulation
is pretty good. It doesn't handle the verticle lines very well.
We have menus that have a box around them and they are all
garbled up. I think it is a tabing problem. I have never
gotten Connect to dial. It is a nice program, but it is
useless without the dialer IMHO. Is the registration $50
or is it $29.95. It lists both numbers.

Does anyone know whether there exists aa decent and/or cheap version of Modula-2 for the Atari ST or STe... I am looking for a copy, primarily for uni but also to do my own programming... I am in Australia, so preferably mail order or shareware addresses (or FTP sites??) would be helpful...

Reply in Email to -
u9262385@cc.uow.edu.au

Thanks.

Rob.!

P.S. Atari are truly hopeless here... rumour has it to support the Falcon in Australia they sponsored a Fender-Bender (Speedway demo-derby car) because it was a Falcon-model car!!! And if that wasn't bad enough, they gave the guy $3000!!! The whole car cost only $1000!!!! Great Computers, lousy marketing....

*** NEW PRODUCT ANNOUNCEMENT ***

I'm pleased to announce that Fair Dinkum's popular Crossword Creator II product is now available in Dutch, French and German language versions as well as the original English. Also available in Dutch or English only is the companion program, Word Search Creator.

These versions include fully translated, printed manuals as well as the programs themselves. For info on ordering, contact our exclusive distributor, Missionware Software, at j.trautschol@genie.geis.com . For specs or info on the programs themselves, simply send an email request to hutch@ilmen.lanl.gov.

Sorry for the semi-commercial post but I thought our European readers might be interested in this announcement as these versions are new and generally not yet available through European outlets.

Thanks!

I don't have a font for you, but I can answer the last question. From the
Warp9 manual: "created with either the DEGAS font editor or the Warp9
Customizer". DEGAS fonts only consist of 128 characters, so the extended
characters that you want cannot be obtained from a DEGAS font. However,
there are zillions of DEGAS fonts out there (a bunch come with Warp9).

I'm looking for owners of Atari SLM laser printers who also use the LaserBrain Epson FX Emulator software with it. A friend of mine with a TT says he cannot get LaserBrain to work on his system. I always thought that LaserBrain was TT compatible but can anyone here confirm or deny this for me? For that matter, does it work with the Falcon? I have a Falcon but no SLM to try it on. Unfortunately, Atari has dropped all support for this nifty utility.

It's important as I frequently recommend LaserBrain to SLM owners for final quality printing of puzzles created with my Crossword Creator II software (which is now marketed exclusively through Missionware Software). It would be somewhat of a kicker if I find out LaserBrain won't work with a TT or Falcon!

Also, does anyone have a _complete_ list of printer control codes for the SLM, either in 'native' or Diablo emulation modes? I'd like to develop an SLM specific printer driver for my puzzle software but I've been unable to locate a complete listing of control codes. I've asked Atari for this info on three occasions and have been disappointed each time with incomplete data. I wonder if Scott Sanders' Atari Compendium book has that info?

Thanks for any help or advice.

First, there are Uniterm macros available (that I hacked together) that will
enable you to use the GEM SZRZ package from Uniterm. GSZRZ is really nice,
and looks good with Uniterm. I set it up so there is an SZ and RZ button
on the little popup window, so Zmodem up/downloading is just a couple of
mouseclicks away. Ftp to ftp.math.fsu.edu (192.12.122.28), and grab the
files. I don't claim my macros are the greatest, but they work for me!

I just got a new version of GSZRZ, and am currently upgrading my macros to
use it. I'll put them up and post when they are done.

I had trouble getting Connect to dial as well. It is a configurational
problem. I seem to remember that you have to change the default dialing
string, and that there is some small trick involved (like, there is a magic
character to indicate a return, like "|" or something). You do all this from
the dialing menu. I cannot remember the details, but you can fix it with
sufficient fumbling :-).

Such as the tiny market and the slow CPU made slower by graphics
contention?

Perhaps you should ask them to develop a Jaguar version, that machine
might actually go somewhere.

It seems my deal for a dsdd 1040 compatible flopy fell through (ie: I never recieved it in mail)... so, once again, I'm looking for a CHEAP dsdd drive to replace my broken one in my 1040ST.

I would also like a portfolio. If you want to sell either of these items at a very low price-- please contact me.

(ie: there's no reason for me to pay $45 for a floppy when I can get a 1040ST for $100-- in fact, I may just get one of these $100 STs JUST for the damn drive.).

Every day, it amazes me that people (_intelligent_ people at that!) are
still developing hardware and software for the Atari platform. Atari's
actions are incredibly mind-boggling.

Personally, I think they know _exactly_ what they're doing. They're
killing off their compute business _on_purpose_ so they can concentrate
on the Jaguar. They haven't just said, "Ok, we're dropping the
ST/TT/Falcon." because it would scare developers away from the Jaguar.

3127. Jaguar makes NEWSWEEK

Newsgroup: comp.sys.atari.st
Date: 1993-12-07 18:26:23 UTC
From: klasmekj@ucunix.san.uc.edu
Message-ID: <2e2hsf$di3@ucunix.san.uc.edu>
Source record: 197194

I just got my Newsweek magazine today (Dec. 13, 1993 issue) and there it was. Jaguar continues to find its way into the spotlight of Nintendo and Sega articles. It was a pretty good segment about 4 inches long out of a (sort of) two page spread.

+====-==-===-========+
|Here is the segment:|
+====-==-===-========+

CHICKEN AND EGG: But like Mario or Luigi prancing through a maze oblivious to the lurking danger, both Sega and Nintendo may get ambushed. Last month Atari, the videogame founder that went belly-up in the 1980s, rolled out Jaguar. At $249, the player offers 60-bit processing capacity that crunches data 100 times faster than SNES or Genesis. The result: color graphics of newr videotape quality, smooth instead of jumpy movement, realistic sounds of screaming jets or human noices and a futuristic three-dimensional game platform. But in a classic chicken-and-egg problem, software developers have shied from creating games for Jaguar until more units are hooked up in America's rec rooms; shoppers are wary of a system for which there exist a mere four cartridges. Although Jaguar won't be for sale outside New York and San Francisco until next year, it has cybercritics gushing. The magazine Electronic Games called it "one powerful cat," and GAMEPRO magazine predicted "Atari may well become king of the jungle once again." (Really, that's what they wrote.) If they're right, the battering that parental wallets take this year will be nothing compared to what's in store in '94.
Or, you could buy your kids a book.

I have been trying to implement dialogs in a window code using the winddial library supplied by Erlend Nagel. However, it seems to be having a problem with edit fields. You can move the cursor between the fields, but cannot enter text in the field. The dialog works fine using standard dialog calls.

Does anyone have any source that will allow dialogs in windows??? I am using HSC 1.4.

>HDX reported <Root sector corrupted, reformat drive!>
>I ignoered this message since it appeared after each formatting
>I tried. To my surprise I could access to disc and it was
>formatted! Why this error message?

Because you were using HDX 5.0. Use 3.0 to format a customized Megafile
unit.
Or try 5.04; 5.00 had some rather strange bugs, it crashed when formatting
a standard SH205/Megafile 20, for example.

>The second problem could be caused by the first:
>AHDI 6.04 (June 93) reports ACSI-UNIT 0 as unspecified drive.
>Why?

Because the Megafile controller doesn't know his name.
Only "true" SCSI drives are able to return their name to the caller.
Use 6.06 instead of 6.04, it fixes a rare GEMDOS bug that might erase an
entire partition.

>I heard about a patch area in the AHDI to specify the drive that
>are present. Could a patch there speed up booting since it takes
>several second recognize that there are no further drives?

Yes, use HD_PATCH.PRG (from Atari) to disable scanning of all units that
you don't have.

>on the STe and its remedy ?

TOS 1.06 equipped 1040 STEs won't boot in medium resolution, they always
come up in low rez, no matter what rez it was in when "Save Desktop" was
invoked.
(This is for color monitors - in mono, everything's fine.)

Bugfix: Use Atari's STE_FIX.PRG in your favourite AUTO folder, or upgrade
to TOS 2.06 :-), or "upgrade" to a used TOS 1.62 chipset from s.b. who now
has 2.06.

Hmmm, a really plain TOS program using ONLY VT-52 style output does no
harm to multitasking - MultiTOS includes a window manager for TOS
programs. It just opens a VT-52 console window for each TOS program
running.
Other multitasking systems also have this feature.

3140. eMail-list

Newsgroup: comp.sys.atari.st

Source record: 197020

Hi there.

As announced in the ST user-magazine, I compiled a list of programmers, hardwarehackers and companies from the ATARI-scene, witch can be contacted via email. This list now contains german people from the MausNet and the german-speaking InterNet. This work is done now, and I start to collect the adresses out off the english-speaking InterNet.

So, get this list via ftp:

ftp.cs.tu-berlin.de, pub/atari/doc/emaillst.zip

This should work. If not, give me a mail. Then I post the complete archive in this group uucoded. Packed, but uncoded, this archive has about 12kB.

If you miss your name, send me a mail containing your realname, your products, your email-adress, and if you like, your private adress and telephone number. For a companies adress, send me the companies name, adress, the name of the person, which stands behind the email-adress, and the email-adress.

Ok, that's it for now. I hope to get a lot of adresses to compile a mostly complete list.

regards, Jimmy

There is a shareware M2 compiler from ana-systems. It can be found at
atari.archive.umich.edu in the atari/Languages directory. There is also
a german M2 compiler there, but I don't speak German, so I haven't tried
it yet.
Personally, I use FTL Modula-2 From HiSoft. It is an excellent compiler,
although it hasn't been updated for a few years. The developer's version
includes a make utility, resource construction set, and a symbolic debugger
It also comes with some very useful nonstandard modules and their complete
source code. I bought it from Toad Computers in Maryland:
(800) 448-8623,(410)544-6943
It was about $100 for the developer version, I think the regular version
is about $80.
Good Luck, and keep programming in Modula!

Source record: 197103
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

In article <CHFB76.60q@world.std.com>, Lexicor@world.std.com (Yat W Siu) writes:
|>
|> The MEDUSA T40 is a 68040/64 Clone based on TOS 3.06, the machine is

Incorrect. Although the MEDUSA is advertized to run at 64 MHz, it is only a 32 MHz machine. The Guy who constructed the beast specifies the MC68040 at its internal clock rate which is twice the external (and Motorola-official) rate. To my knowledge, the fastest 68040 sold by Motorola runs at 40 MHz.

Price/Performance: about 15 Months ago, i have been very impressed by the performance of an early prototype of the box (was an ST accelerator). But 6000 DM for a system with only 8 MB RAM and 240 MB IDE-Disk is expensive. Consider the Linux-box You will get for the same price (roughly twice the RAM, twice the disk capacity, twice the speed).

Or, consider a SPARC Classic clone. Recently i saw 6900 DM for a system with 15x2.54-cm monitor (in germany it is illegal to write inches :-)), 16 MB RAM, 1 GB Disk, Solaris 1.x or 2.x (+15 % tax).

Or consider the DM 6000 (incl. tax) i paid for my 25 MHz SPARC clone w. 17x2.54 cm grayscale monitor, 16 MB RAM, 422 MB DISK, SunOS 4.1.2 one year ago? This system is about as fast as the 32 MHz 68040 of the MEDUSA !!.

Concluding: the MEDUSA is probably a very nice system, so nice that Atari should licence it and sell it under the official label (Atari: this might be cheaper than the development of the urgently needed powerful system, doesn't it?), but the prices have to drop a lot before the system will be competitive to the real world. (Atari was: power without the price. Now it seems to be the opposite).

Michael Ritzert

BTW: i still like my good old accelerated Mega ST!

Well, I sucessfully ran a fresh copy of Poulous II on our demo unit Falcon 030 at the time PII came out. Backward was just needed for emulating the ST's sound hardware bug, seems as if the author still uses illegal soundchip mirror adresses. Apart from that, it ran fine in 16 MHz on a VGA monitor.

There is a one page ad in the December issue of ST Applications.

3145. STacy / STbook

Newsgroup: comp.sys.atari.st
Date: 1993-12-07 23:43:58 UTC
From: woodford@esca.com
Message-ID: <1993Dec7.234358.4209@esca.com>
Source record: 197114

Work has taken me to the US of A for a while, away from my ST :-/
As a result, a portable ST, like STacy or STbook would be very useful...

Q. Do Atari still make and market the STacy and/or STbook? If so,
does anyone in the Seattle area (_if_ there is any ST life here!) know of
an outlet?
Q. What are the specs.?
Q. Which is best?

I need at least 20meg disk space and a DMA port. Does the STbook have this?

Cheers, y'all: Steve ;-)

3146. Re: MEDUSA (68040) System

Newsgroup: comp.sys.atari.st

>Incorrect. Although the MEDUSA is advertized to run at 64 MHz, it is only a 32 MHz
>machine. The Guy who constructed the beast specifies the MC68040 at its internal
>clock rate which is twice the external (and Motorola-official) rate. To my
>knowledge, the fastest 68040 sold by Motorola runs at 40 MHz.

It says "clock doubled", to whatever point and degree that may be true...

>
>Price/Performance: about 15 Months ago, i have been very impressed by the
>performance of an early prototype of the box (was an ST accelerator). But 6000 DM
>for a system with only 8 MB RAM and 240 MB IDE-Disk is expensive. Consider the
>Linux-box You will get for the same price (roughly twice the RAM, twice the disk
>capacity, twice the speed).

Your prices are 15 Months old too :) 6000, DM is about 4,000 U$D am I right?
8 Megabyets of RAM and 240 MB Ide harddrive for the T40 is around 3,000 U$D
ok, ok ok, so its in the USA :) but that's still 1,000 U$D Cheaper...and has
an ET-4000..

>
>Or, consider a SPARC Classic clone. Recently i saw 6900 DM for a system with
>15x2.54-cm monitor (in germany it is illegal to write inches :-)), 16 MB RAM, 1

>Or consider the DM 6000 (incl. tax) i paid for my 25 MHz SPARC clone w. 17x2.54
>cm grayscale monitor, 16 MB RAM, 422 MB DISK, SunOS 4.1.2 one year ago? This
>system is about as fast as the 32 MHz 68040 of the MEDUSA !!.
>

Is that a brandnew SPARC or a second hand? Anyway, yes, SPARC is nice too!
I mean...an INDY costs 5,000 U$D only...and THAT's REALLY nice :) if you're
going to take it that far <grin>

>Concluding: the MEDUSA is probably a very nice system, so nice that Atari should
>licence it and sell it under the official label (Atari: this might be cheaper than
>the development of the urgently needed powerful system, doesn't it?),

I would agree, but that is not Atari's style now is it ;)

but the
>prices have to drop a lot before the system will be competitive to the real world.
>(Atari was: power without the price. Now it seems to be the opposite).
>

Define drop a lot.....the Medusa does have some nice things to it like
the on board RAM Expansion to 64 Megs of RAM, ISA Bus for ET-4000 and the

PC Pizzabox Design for additional boards :)

Well...the Medusa is not the right system to compare it with...it is a separate system, designed by an individual company, compare the Medusa to an Amiga 4000 pricing then it isn't so bad, and please do not forget its a niche Market, and the wholesome argument is the use of your Software with it, a new System would ultimately mean a new spendin on Software.

It's also the only 68040 Atari around....

|>
|> I wondered when Mr. Venable would enter into this discussion... :)

Gee, it's nice to be noticed...

|> Truly buggy software shouldn't be sold, granted. It's not right, but it's not
|> piracy, either. And I fail to see the argument against limited demo versions of
|> most products. If a demo game only has 3 levels (instead of 50) or a demo app
|> doesn't let you save a project file, do you really mean to say that they won't
|> give you a good "feel" for the product? Some demos are lame, sure, but all???

I agree, there's a broad spectrum of quality wrt. demo software; but if I want to test the graphics format conversion and the "demo" program won't let me save any files, what good is it? And what about unintentional bugs introduced in having a "demo" version and a "real" version? For games, it may be fine, but for other programs, I have my doubts.

|> >if the the software is high quality, and reasonably priced, I might buy it.
|>
|> Great. But do you mean by that that if the software is expensive, will you
|> steal it since you think it's overpriced? Or if you think it's low quality
|> you will steal it to teach the developers a lesson? So all we have to do to
|> eliminate piracy is to provide high quality software at very low prices???
|> Gee, what a wonderful (and ridiculously utopian) idea!

No. I do not practice or condone piracy. I write software myself, both professionally (mostly scientific Fortran) and as a hobby, and can both appreciate and understand the position of developers. Stealing is wrong. I only wish to point out that the situation is NOT one-sided; taking money for buggy software is also stealing. I either buy it or do without; if the software is overpriced, well, it's the developer's loss (of sales). I simply vote with my wallet; that's the only "lesson" needed, IMHO.

|> >I wish developers would pursue program bugs with the same relentlessness
|> >they seem to lavish on guarding against piracy; perhaps I wouldn't feel

|> >so victimized by the piracy of software companies themselves.
|>
|> Has _every_ piece of software you ever bought been so horribly buggy that
|> you felt you deserved your money back? If so, you HAVE had some bad luck! I
|> guess I've been fortunate in that the vast majority of Atari software I've
|> bought has been quite up to par, or at the very least, functional.

Well, most of the companies I purchased "buggy" software from are no longer
in business; I'm not sure what that means. And most of what I bought does
work, usually fairly well. Unless you include the fact that half my games
"broke" when I upgraded to TOS 1.4; it seems the developers used some tricks
specific to earlier TOS versions. Well, now there's hundreds of dollars down
the drain-- due to poor programming practices.

|> You keep dumping on the developers but I think your angst is misplaced. It's
|> the actions of the PIRATES and yes, those that turn a blind eye towards
|> piracy, that have forced the situation we all are suffering through now.
|> Granted, Atari's mismanagement hasn't done much to benefit sales, either. :)

Piracy and Atari management are major problems; but I'm out at least a
thousand dollars due to bad programming practices. I can't blame pirates
or Atari for that; they had nothing to do with it.

|> If you want to help remedy the situation, then start by refusing to ever
make
|> or accept an illegal copy of software again. Spurn those that try to give
you
|> illegal copies. Tell them how it hurts the industry and most importantly,
you
|> as the user. Do not frequent pirate BBS systems and if you do find a BBS
with
|> pirated software, politely inform the sysop how much you disaprove. YOU can
|> make a difference. The question is, do have the courage to do so???

Please, just because I defend the notion of "try before buy", don't infer
anything more. I make enough money to buy the software I want, and I do
NOT have a single copy of ANY pirated software for my ST, and never did.
I don't know of and have never frequented any pirate BBS systems.

As you've noted, we don't live in an ideal world, and at times, when
people can take an unfair advantage, they will. Just don't assume that
these people are always on one side of the situation; every computer
owner is not a pirate, and not all developers are free from blame.

I contend that crappy software has hurt the Atari market, as well as
piracy and Atari itself. There's an old saying (Irish perhaps) which
goes: "Fool me once, shame on you; fool me twice, shame on me." I want
to try software before I buy it, because I have been burned. Since when
does caution make me a pirate?

Karl Meyland (karlm@highett.mel.dbce.csiro.au) wrote:
: Hi there everyone out there in Net-Land!

: Well today, after many problems (mainly finals ...) I release the
: first official copy of SNAPPER. A few of us (Erlend, Hermann and I)
: have noticed that there is a sad lacking of an information system to
: find out what software is available for the good old ATARI range of
: computers by FTP, so we created a project called SNAPPER. SNAPPER
: is/will be a database of all the software we can find for FTP'ing.
: The database is similar to the FISH index on the AMIGA (bleurgh ;^))
: and the LINUX operating system. By compiling a database of what is
: available, we hope to aide those "I've need of a XXXX type program.."
: requests, and to ensure that people can always get the latest
: software versions. A brief synopsis is in the file itself, as are
: the instructions. We welcome all your comments, suggestions, praise!?
: and hope that everyone will participate in the project by filling out
: entries for us.

: Well that's about it, If you have problems, whatever, feel free to
: drop me some e-mail at:

: karlm@mel.dbc.csiro.au

: and I'll endeavour to reply to everyone!

: Best Regards,

: Karl.

: ----- 8< ---- CUT HERE FOR SNAPPER v0.2 TEMPLATE ----- 8< -----

: ------------------------------------------------------------------------

: SNAPPER - Atari FISH Software DataBase Template

: e-mail this to karlm@mel.dbce.csiro.au,
: and a copy of the software as well if possible.

: +----------------------------------------+
: | Release Date : Friday November 11th, 1993.|
: +----------------------------------------+

: ------------------------------------------------------------------------
: +---------+
: | HISTORY |
: +---------+
```

: Snapper is a DataBase of information about each of the software
: packages that are available by FTP for the Atari range of computers.
: It was thought that an indexing system whereby people could easily
: search for particular types of software, updates of previous software,
: etc. should be created. After seeing similar systems on the Amiga
: range of computers, (such as the FRED FISH series), and the LSM (Linux
: Software Map) for the Linux operating system, it was deemed that not
: only was such a tool useful, but in light of all the different sites
: around the world which are growing, it is almost a necssity. And so
: it began ...
:
: Why 'Snapper'? Well, Snapper is a breed of FISH ..... ;^)

: Credits go to Erland Nagel (error@stack.urc.tue.nl) and Hermann Samso
: (S_SAMSO@irav1.ira.uka.de) for getting me to do this (even though I
: should have been more logical in thinking ... %@))
: ---
: +---------+
: | UPDATES |
: +---------+

: New versions of this document will be uploaded to two main sites
: directly,
: * The University Of Michigan Archives (atari.archive.umich.edu),
: * Universiy Of Kaiserslauten (ftp.uni-kl.de)
: as they are released. Updates will also be posted to the newsgroups
: * comp.sys.atari.st
: * comp.sys.atari.8bit
: when updated.
: ---
: +--------------+
: | INSTRUCTIONS |
: +--------------+

: Firstly, when submitting, ALWAYS use the template below. Not only
: does it save time for the Snapper maintainers, but it also stops us
: from learning hieroglyphics, etc. ;^) Please submit all entries in
: English! It doesn't matter if the english is bad, just make it
: understandable. Entries in languages other than English will be
: deleted.

: Now the key rules.
: 1. Fill in as much as possible! This usefullness of this DataBase
: depends entirely on how much information you can give, so fill 'em
: up!
: 2. Don't delete anything! If you don't have anything to add in, just
: leave it BLANK.
: 3. Also, as above, don't rename anything. If you have suggestions
: for changes, e-mail me, Erlend or Hermann, and we'll try to
: integrate your ideas into the next revision. Otherwise,
: leave the sheet alone!
: 4. Once finished, e-mail the completed copy to me

: (karlm@mel.dbce.csiro.au)!
: 5. Also, if you notice any changes or corrections that are necessary,
: mark them on a copy of the template. This makes it easier for me
: to understand changes, and it also aides you in trying to explain
: the changes!

: Thanks for putting in the time and filling out this template. Your
: time and enthusiasm will help all Atari users out there, and your help
: will ensure that the Snapper DataBase will continue to become a
: trusted resource in the Atari Community.

: Best Regards,

: Karl.

Way, way, WAAAAAAAAAAY back when, I heard about the possibility that you could get a bit of hardware and software, under $100 US, that would plug into the DSP port on the Falcon and evvectively emulate a v.32bis/v.42bis modem.

Does this exist? If so, where is it available, and how much?

As I am STILL crawling at 2400 baud, I could REALLY use something like this soon after I get my Falcon... Though my F purchase may be delayed and instead I may be getting myself a US Robotics Sportster from work for myself for Christmas...

3154. Help! My STe keeps crashing!

Newsgroup: comp.sys.atari.st
Date: 1993-12-08 05:39:02 UTC
From: rjung@netcom.com
Message-ID: <rjungCHpBp3.9xr@netcom.com>
Source record: 197119

I have a very, very weird and annoying problem here...

I have a four-megabyte 520 STe, which has been working wonderfully until the last two months. I do not know why, I do not know how, but now the machine has a tendency to reboot, and eventually crash, without provocation.

Crashes occur without rhyme or reason, or at least none that I can detect. The machine will run fine for hours on end one day, then crash relatively quickly on the next. Once it starts crashing, rebooting is difficult, and it often bombs while running the contents of the AUTO folder or soon after I reach the Desktop. Only a power-down and long wait seems to alleviate the problem, but eventually it returns.

It's crashed even while I've done nothing at all (idling on the GEM Desktop). Sometimes, when it reboots, the screen displays an "Out of internal memory -- please use FOLDERXXX.PRG" message.

To my recollection, I haven't added any new software that may be causing the crashes to occur.

I left the machine with my local Atari dealer for three weeks, and they could not get in to crash at all. I think it's a software problem as a result. I was thinking about a virus for a while, but running AV_KILL does not reveal anything.

I've tried disabling and re-ordering my accessories and AUTO programs. I think I have the problem narrowed down to either G+PLUS or WARP 9, but attempts to change the order that the accessories and programs load do not seem to help. The system is running TOS 1.62, WARP 9 version 3.75, and G+PLUS version 1.3. This seems especially confusing to me because these programs were working fine "before".

Anyway, if I sound frazzled, it's because I am. B-) I'm at the end of my rope here, and wonder if anyone else have a solution or suggestion. Answers by both e-mail or posts are fine, though mail is preferred.

Come on ! It's been centuries now we know the 68040 doesn't run
internally at double clock speed, even though there is a little tiny
small negligible part of the processor that uses a clock twice as
fast. The 040 is NOT clock doubled. Go ask Motorola...

: Atari is still using the 68030. What's up?

The primary concern at this time is the Jaguar. Atari will release the 040
Falcon if that game machine sells okay.

That's all the infos I got from Atari Europe.

Vince.

But isn't that how Intel specify their chips ? A DX2/66 is only a clock doubled DX33.....but they always advertise the systems as "66 MHz 486". Only the inside of the processor is 66MHz - even the VESA bus is only 33MHz.

>Price/Performance: about 15 Months ago, i have been very impressed by the
>performance of an early prototype of the box (was an ST accelerator). But 6000 DM
>for a system with only 8 MB RAM and 240 MB IDE-Disk is expensive. Consider the
>Linux-box You will get for the same price (roughly twice the RAM, twice the disk
>capacity, twice the speed).
>

Hmm...not sure about twice the speed there, Motorola chips are significantly faster than Intel chip of the same clock (they're better designed). And also note that in Intel based systems, only the VESA bus sections actually run at anything like processor speed, the rest of the system is on a seperate bus at a much lower clock. From what I hear the performance of the Medusa is more in the SPARC or high end MAC arena, not in the sub-Pentium PC arena.

>Or, consider a SPARC Classic clone. Recently i saw 6900 DM for a system with
>15x2.54-cm monitor (in germany it is illegal to write inches :-)), 16 MB RAM, 1
>GB Disk, Solaris 1.x or 2.x (+15 % tax).

You could also get a Sparc 2 cw 19" monitor & 32MB of RAM for 3,1936.50 inc vat (UK). But you have to bear in mind that for a SPARC, the cheap bit is the hardware - the cose of workstation based applications make PC & Atari programs seem like PD.

>
>Or consider the DM 6000 (incl. tax) i paid for my 25 MHz SPARC clone w. 17x2.54

> |-----|
> |. . .|
```

These boxes are new control elements. They work only with GEM 3.xx (TOS 2.xx/3.xx). If one of the scrollboxes is selected, the direction and distance between scrollbox and mouse determine the direction and speed of scrolling. (speed: only if the program supports the extended WM_ARROWED messages).
So you can scroll to all directions you want with various speed.

Martin

BTW: Is there a new version of AutoRaise which supports WINX 2.2?
Until now I told the people to use the following patch:

AutoRaise 2.0 patch:

```
0406: 70 FF
06F0: 30 2B 20 6F 66 20 33 31 20 4A 75 6C 20 31 39 39 33 20

I really, REALLY wish you guys would stop calling it a "64Mhz" machine.
It's not. You can't attach an '040 to a 64Mhz bus. The '040 doesn't
use "clock-doubling" like the Intel monstrosities... in fact, it uses
the clock in a different way.

Didn't we explain this several times already?

This is indeed the point. The TT and Falcon also have this AppleTalk
port.

> Also, if this networking is possible, is there any software support for this,
> or information about what would be required to make this work ?

That's the one thing Atari overlooked... there is absolutely NO
software that I know of that will allow you to network with other
MegaSTe/TT/Falcon computers using the LAN port, let alone a Mac/PC using
AppleTalk.

Are you at all surprised?

The IAAD should write a similar article about Atari's dealings since the
ST was released. IMHO, Atari itself is more of a liability than any
number of pirates (you don't see DOS vendors suffering, and I've never
seen a DOS machine that didn't have pirated software on it).

Oh, but I guess that would put the writer and anyone that helped them on
Atari's famous "black list", wouldn't it?

You guys don't listen well. I was gathering information for when I get
a _new_ /f/a/s/t/e/r/ computer. There's no point in having more than
one machine on my desk (hey, it's small), and other systems (PCs running
OS/2 or Linux or Solaris or NeXTstep, NeXT workstations, Amigas, Sun
workstations, etc) can all do it no problem. Why would anyone want to
have a computer dedicated to a BBS, unless they were locked into some
brain-dead OS like TOS or DOS?

>
>Why not Lh5 it!? (Lharc 2.32 is blindingly fast, and is getting to the
>stage of having all the options ZOO does.)

If I remember correctly (and I'm sure someone will point it out if I'm not :-)
I believe that ZOO 2.10 (high compression mode) uses the same or similar
compression method to Lharc's LH5 mode. Hence not much of a difference
in size either way (I haven't checked out this particular binary to see
if it is in that mode or not)...

>I don't want to start (another) archiver war, but on files 1meg+ - using
>such old methods is a bit pedantic!

See above paragraph.... (if anything, Lharc 2.30? probably archives
and unarchives FASTER, but I dunno if it compresses any smaller)...

Just something I've notices scanning around the various nets. It seems
as the following are the popular conventions (not necessarily agreed upon,
but just appearances):

Atari ST series Lharc and STZIP
IBM's PkZIP
Unix/Gnu ZOO, Gzip

This is not to say these are the only ones used. But if you're looking for
a particular set of files, it might be helpful to have the appropriate
compressers.

One last question (to anyone): does Lharc 2.30(?) support extended
filenames in the Atari version (i.e. if I have some files on the minix
partition named "math-68881.h" and similar, will it handle these fine?).
Now that I'm messing with minix partitions, this stuff becomes
meaningful to me :-)

> | If there's a 50/50 chance of something going wrong, O O |

[not really a flame, but... :-]

I've seem to notice that I can use Lharc to uncompress TO a minix partition
from a TOS partition, but I think I had problems working solely under minix.
Has anyone compiled the unix (not Atari) sources to the latest version
of Lharc so as to get a minix-friendly version?

>If you want real good compression and maximum portability, use GZIP!

Don't forget that compatible Lharc, Zip, Zoo, Gzip, and many other good
archivers are available on different computers and operating systems.
Portability overdrive :-)

> They will. Wait for the CeBit.
> You are a pessimist and don't tell me you are a realist.

I am indeed a pessimist. But I'm confident in my pessimism.... I've bet
Stephen Jacobs a video game of the winner's choice that Atari will not
release another computer by Jan 1/95. I believe the terms of our bet
are "available for sale", not Atari's usual "oh, it's released, but
you'll have to wait 6-8 months to see it".

Atari's shown things before that never appeared in reality. ST-Pad for
example, and ST-Book (outside of a few European ones that were
produced).

Atari't got _all_ of its eggs in the Jaguar basket right now... Even
Eric Smith, the OS hacker behind MiNT, has been working on Jaguar stuff!

In article <1993Dec7.044903.1@acad2.alaska.edu>, aykrua@acad2.alaska.edu says:
>
>So the question is- how does somebody in Alaska buy a copy or even register a
>copy of CoNnect 2.40??? The latest 'shareware' version I've been able to find
>(on wuarchive.wustl.edu) is 2.10 with patches/upgrades to 2.20 in the same area
>(in the Telecomm subdirectory)... does archive.umich.edu have a newer one to
>ftp?

The latest *English* version of CoNnect is 2.20 up to this point. CoNnect 2.40
is available, but it's in german (the english RSC and help files are not in it
yet - hopefully soon though). Actually, you can simply use the files in
the 2.20 archive and work (the only thing out of 2.10 you might want are
some of the "extra" files like the highspeed modem RTS things, etc).

>Also, if not, back to the original question -- if I'm way the heck up here
>in Alaska (not a single dealer in the entire state to my knowledge), can I
>still register my older version and/or get the upgrade to 2.40 by sending $50
>to the address listed in the archived docs?

[re: Michael Baffoni]

Probably should still be a good address. This is how I registered. Either
he or Wolfgang Warner (the author) check out the newsgroups here and
there, so they may reply as well...

>BTW- I've never actually gotten either version of CoNnect to work, they do
>almost everything except DIAL the number... either I'm doing something wrong
>(most likely scenario) or these truly are 'demo' versions.

You might check out your modem settings. When you try to use the dialer,
do you get a message like "you're already connected to a host" or something
like that? If so, try a "AT&C1" command. (I mention this because my new
modem, a Linelink 144e (it's a MAC modem, shhhh, don't tell Sinclair :-)
has the CD light on all the time, which makes CoNnect think it's already connected -
I just change this setting and the dialer works fine; this never happened
with my Supra2400, BTW). CoNnect is fully functional for I think up to
30 days prior to registration...

Or for the mean time (to test it out) maybe just "ATDT<number>" from the
window until you figure out why the dialer is acting strange for you?

>That's too bad if
>it is the latter case, as I'd like to see how it *really* handles VT emulation,
>an absolute requirement for using the mailer on our VAX.

It should work (also with PHONE and other fun-filled VAX utilities :-)

Cool thing is to view "VT100 movies" with CoNnect - because some,
like "Twilight Zone" really seem to push the emulation...

Rob

|> filenames in the Atari version (i.e. if I have some files on the minix
|> partition named "math-68881.h" and similar, will it handle these fine?).
|> Now that I'm messing with minix partitions, this stuff becomes
|> meaningful to me :-)

2.30 will try but 2.32 will do it.
I had many problems with 2.30 (well, 4 then i switched back to 2.22)
2.32 works fine now, even with /tmp on a MinixFS, long filenames (14 chars)
and it creates files on case-sensitiv FS in lower case when they
come from a case-insensitive FS.

(And lharc is coded in assembler, ZOO in C, which makes ZOO more
portable. Ever tried to extract an -lh5- file with lharc on
a HP 400 running HP-UX 9.0?)

If someone has / knows about a new lharc for HP 400 and/or HP 700,
runing HP-UX 9.0/9.01, please tell me!

Source record: 197147

] I have a four-megabyte 520 STe, which has been working wonderfully until
] last two months. I do not know why, I do not know how, but now the machi
] has a tendency to reboot, and eventually crash, without provocation.

Sounds like loose SIMM's. Mine was doing this the other day, (brand new),
I'd say it had been knocked around a bit on the way over, so I did the
old pick it up an inch and drop it onto the table trick. This is not
really a good idea, but it works. If your machine is no longer under
warrantee, remove the cover, and push the SIMM's and maybe also the ROM's
(Which will require removal of some shielding), down firmly, as after
a while they can come loose, causing problems much like you describe,
I've heard of it happening quite often. The local repair-person sticks
little blobs of hot-glue on the ends of the simms to stick them to their
slots. That keeps 'em still!

(Mine kept crashing all the time, dropped it, been fine since, although
I'm trying to work out a way of upgrading to 4meg without stuffing
the warrantee, as it took almost a month to get here, and I don't want
to use a TOS 1.0 machine again... (Yecch, 1.62 is Soooo much faster!!)

3190. Trouble with harware I sold

Newsgroup: comp.sys.atari.st
Date: 1993-12-08 20:04:44 UTC
From: eggert@sun.lclark.edu
Message-ID: <1993Dec8.200444.19721@lclark.edu>
Source record: 197141
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I recently sold a computer to a net user in San Francisco. The day
before I packed the computer and shipped it out, I tested it to make sure
it worked. Everything appeared fine. I played around with several disks
and even loaded Captain Blood for a quick little game.

David received the computer yesterday, and then sent this message to me.

>Hi. The computer came yesterday, but I was not home. It came
>again and I paid the COD in full. The monitor has not come yet.
>
>There is a problem though. I plugged the 1040ST into my Atari color
>monitor. I get the desktop, but no drive icon shows up. Even when
>I put a disk in the drive, nothing happens and no icon shows up.
>Also, when I turn on the system the drive light does not come on.
>Do you know what the problem is?
>
>-Dave Lee-
>ddlee@crl.com
>415-664-7336

I don't dispute that there is a problem with the machine. I assume the
drive was damaged in transit. David said that he opened the case and
checked all the connections but it did not help.

Can anyone suggest possibilities as to what the problem might be and ways
to fix it? Mr. Lee is going to try an external drive this evening, and
if the controller is okay, we'll probably assume that the trouble lies in
the drive mechanism.

We would both prefer an easy fix to trying to deal with UPS for insurance
coverage (I did have it insured).

Please send replies to both dave and myself.

eggert@lclark.edu
ddlee@crl.com

Thanks.
Jon.

Oh, oh... you did a no-no.

You put "Atari" and "Advertising" in the same sentence! :)

But seriously, I've heard about the "massive" print advertising campaign and the limited TV spots in the NYC and bay areas but believe me folks, it's going to take a lot more than that to put a dent in Nintendo's armor!

It doesn't matter if the Jaguar is superior. Slick advertising and lots of it is what's going to sell this thing. And once again Atari has missed the mark for a big, nation-wide rollout in time for Christmas. <sigh>

I put it there a couple of days ago, along with lharc 2.32 and GEM SZRZ 2.28.
It should appear in the Newitems directory soon, if not already.

But then, would you call the alpha a 200Mhz or 40Mhz processor ?
(actually, I'm not sure about the 40, but it's close)
If the actual clock rate of the processor is 66Mhz, I guess it makes
sense to name it correspondingly, even if the memory bus is slower
(the memory bus is anyway still likely to be faster than the RAM
connected to it...even though HP can do miracles).
So, if the medusa actually uses a clock-doubled 040 at 64Mhz, ...
(funny how Motorola knows how not to make people aware of its new
products) (or is it intel who knows all too well how to take people in ?)

> Hmm...not sure about twice the speed there, Motorola chips are significantly
> faster than Intel chip of the same clock (they're better designed). And also

Aha ! You may be interested in some benchmarks comparing DX2/66 to
sparcstation 2, because you could be surprised ! (I know, you're
right, fp sucks on intel...hopefully this will convince people to
switch to some more honorable architecture)

> You could also get a Sparc 2 cw 19" monitor & 32MB of RAM for 3,1936.50 inc vat

Sorry Chris, I'll correct you on this one :)

There is Software that supports the networking of Falcon and Mega STe or also just TT Lan.

It is called PowerNET and does exactly that..it's about a year or more old and you can setup your Atari's like a real networking system.

So you can have remote printers and print...midi net access...net mail, joint database with Hyperlink etc.

As for your 68040/64 opinion I am posting an offical post to settle this fun argument :)

Cheerio

Yes...but the Stylus (not ST Pad <grin>) was never claimed to be on sale.
Also....there were only 5000 made or so..which Atari sold out and people
are still craving for them...it's not good that it's been stopped but
priorities had to be set.

And I can understand it if Atari is concentrating in the Games Market with
the Jaguar, it is their one big chance (and pretty much close to only).

Cheers

Perhaps, perhaps not. Either way I'm pretty happy with my Falcon, even more
so now I've got a nice 15" SVGA monitor to use with it. I've now got the
difficult decision of whether or not to move the TV I used to use for
colour graphics work (main monitor was SM124) to my bedroom, or leaving
it in my work room for watching TV whilst I work. Its a hard life.

Kev,

What about ST Zip? I've been using it for a while now, and don't use
anything else (when compressing) any more. I don't know about its
compression ratios, but its user interface is a dream to use (this from
a hardened CLI/shell fan!). And at least it doesn't trash your hard disk
every so often like Lharc used to.

3209. Falcon internal hard drive question

Newsgroup: comp.sys.atari.st
Date: 1993-12-09 03:49:03 UTC
From: fnjah@aurora.alaska.edu
Message-ID: <1993Dec8.184903.1@aurora.alaska.edu>
Source record: 197026

Will someone please correct me if I am wrong, but the Falcon's internal IDE port has 44 pins, and 2.5 inch IDE hard drives have 50 pins (some not used). But the only IDE cables I can find say they are 40 pin connectors.
Is this the cable I need to hook up an internal drive or is there a 44 pin cable out there somewhere? Does anybody know where to get one?

3210. Thanks!/The state of Atari U.S.

Source record: 197047

I just wanted to extend my thanks for all of the prompt replies I recieved concerning my questions about CoNnect... thanks especially to the person from Florida who gave me the ftp site address for the macro to use in conjunction with Uniterm... if those work, I'll probably stick with Uniterm, at least until I get another memory upgrade! CoNnect looks great, but it also looks like it takes up a lot of memory... on an old 1 megger like my ST, small but effective applications are the best bet.

I have owned my ST since they first came out and have been satisified with almost everything about it, but I fear that if they don't work to re-establish some sort of dealer network in the U.S., they will be a dead issue. Like I mentioned in my last post, there isn't a single dealer in this state (a state that has nearly as much land mass as the entire U.S. and yet only has 500,000 residents). I think perhaps that the nearest dealer exists in either Seattle or Portland, or maybe even as far away as San Jose. Not a great situation for any computer owner. This is too bad because if the situation doesn't change, I'm seriously thinking of going to Pentium or one of the newer MAC's... any thoughts on this? I'd like a Falcon and lots of RAM / STORAGE, but how's a guy supposed to get a chance to see it in action if he has to spend several hundred dollars for the plane ticket to his nearest dealer! (I'm being entirely serious here)...

Thanks again!

So what exactly is the commercial part of GSZRZ? The GEM shell? I seem to recall that RZ and SZ were written by Omen Technologies and distributed to users/systems by the folks at GNU as freeware/shareware (I'll have to re-read the docs to find out for sure... it's been a week since I looked at them.)

Surely you're not asserting that the author of GSZRZ has completely rewritten the ZMODEM protocol specifically for the Atari ST? You ARE saying that versions >1.9b are not sharewear... but what does the author of GSZRZ want for the latest version, and is he charging just for the GEM shell or for SZ and RZ?

Hi!

Sorry if this is messy, but PNEWS has puked on me again ...

I have to get rid of my ST, so I now have no more use for my Spectre 128 or my Happy Discovery Cartridges. They are both in full working order, nothing wrong with them, just don't work with my Falcon, that's all.

Spectre 128 Cartridge -
Has 128k ROMS in it, Software for it, vers 1.9f and 2.65, Translator? Software also, Still in box, All manuals. Asking price -
$250 Australian, about $160 US.

Discovery Cartridge, Option 0 -
I bought this to transfer MAC disks to Spectre Format, It also copies anything you're likely to find, comes with all software, boxes, etc. Nice unit.
Asking price -
$200 Australian, about $130 US.

Also, I will sell both together for $400 Australian, $260 US.

If you want it shipped, it'll cost a little more ....

E-Mail me if you are interested,

Karl.

Hi guys,

We recently got a vintage 1987 Supra shoebox enclosure with an Atari host adaptor. It had a Miniscribe 20Mb drive that still ran but was chock full of hard blocks (too many to successfully reformat). Unfortunately I threw it away without writing down the model #. We've tried several other drives (SCSI and Miniscribe) with the host adaptor, none of which it recognizes. I've been told that this adaptor won't recognize anything bigger than 30 Mb. Can anyone tell me which drives it will work with? Does anyone have a (cheap < $50) one to sell?

The only marker on the host adaptor is:

" Supra c(1987) 30-0014-5 "

I may be able to get a replacement Miniscribe from our Surplus dept here. What model # should I look for? The one I have already is a Miniscribe model 84255, taken off an old Unix machine. Should this drive work?

Every drive I've tried triggers a "dma device not responding" message.

] >(The symptoms are that of the 'BielStein' (sp?) virus.....)
]
] Just out of morbid curiousity, what does this virus do to your system? D
] you know where you got it? Regarding UVK, I thought Oregon Research
] was handling support in the States, and Hi-Soft in Europe. I could be
] wrong...

Well, I'm not sure what the virus *does*, but it copies itself as usual,
but can change a few bytes of code around, and mutate itself into
(I think this was the amount), 65000 different forms. It also has
bytes in the appropriate places to make UVK think it is a harmless
MS-DOS boot sector.

Where I got it!? I wouldn't have a clue, I was just trying to write
an autobooter to a disk, and then wondered why it didn't work, so
I tried Vkiller, (which didn't have a clue what it was), which eventually
reported that something in the system had written itself to the
boot-sector, I promptly entered large-scale-panic mode, and threw every
virus killer I had at the thing, and eventually resorted to using
Chasseur II and killing anything that looked like the virus (A large
chunk of it was the same every time). The other day, I was using the
system, and a similar routine resulted. There'll be 1 disk I don
't bother checking because I don't think I ever use it.... And that'll
be the one that has it on it!

I'm in New Zealand, not the States or Europe, but in Australasia!

> Actually - there is a clock doubled 68040 - Go ask motorola :)

According to Jim Reinhart, manager of 68000 marketing and applications for Motorola at Austin, Texas, the 040 machines now on the market could already make use of the chip's internal clock-doubling capability. By feeding a 12.5-MHz signal to an external phase-locked-loop synthesizer -- such as Moto's 88916 clock oscillator -- outputs of 25 and 50 MHz can be generated and used by the 040-based system to pace the memory and the internal processor logic, respectively. Apparently, this double-speed capability has always been present in the 68040 chips.

(The above information was taken from a story in the Sept 20th issue of Electronic Buyers' News, by the way. Pages 1 and 8, to be specific.)

3219. 16MHz switch for MEGA STE

Newsgroup: comp.sys.atari.st
Date: 1993-12-09 09:41:21 UTC
From: misler@stud.ee.ethz.ch
Message-ID: <misler.755430081@tardis-a1>
Source record: 197044

Could someone help me: I've got a MEGA STE, but no CPX to witch it to 16MHz. Where can I get this or how may I change the CLK-freq myself?

MATHEW

3220. Re: ISHAR II Problems....

|> makes annoying noises, or bombs) sooner or later. The game tends to crash
|> earlier if I let the soundtrack play. Is there something I'm doing wrong?
|> A patch program I'm missing? Has anyone else experienced these problems?
I get Ishar II crashing on my 4/65 4.01 machine but rarely. When I first got the game, I was off ill from work and played it about 8 hours a day for 3 days and it crashed 3 times. I regularly save though so it wasn't a problem. It does seem very sensetive to memory though, I can't run it without renaming my Auto folder (there's a lot in my Auto folder) and killing a few accs. I play it with and without music and always from HD.
More annoying is sometimes the mouse control goes haywire and it ignores any attempts at clicking anywhere. It hasn't crashed though and the game continues running ie people kill you, things move, sounds play.

What Excel features are required? If it's just a standard sort of spreadsheet with graphs, limited database & lotus 123 functionality to 123r2, then LDW Power v1 or 2 will do the trick quite nicely.

This may not be the reason, but I know several musicians who, although they
have BOUGHT Cubase, still run the hacked version 2.0, as it actually works
BETTER than the original. Are they in the wrong - they have paid for the software
so are they in the wrong ?

Brings to mind the Neochrome Master debacle.......thats better than the original
as well.

|> licenses? For example Streetfighter 2 Super, Mortal Kombat, a Sonic type klone
|> (eg Zool). Surely then the console will sell? I mean, if people saw these
I wouldn't buy any kind of streetfight/mortal Kombat type game as IMHO they are all mindless rubbish. As for Zool, Zool2 is being ported to the Jag according to several magazines I have read.
Tengen/Atari Games have also licensed Jag technology to use in future arcade machiens so hopefully future arcade hits will migrate pretty quickly.

|> And why don't Atari advertise the fact that they have invented this
|> brilliant machine? I ask people if they have heard of it and they go: 'Is that
They are. In the US sale areas they are doing a fair bit of TV advertising.

|> Hopefully someone out there can answer these questions and pour light on the
|> subject of 'Atari and Advertising'!!!
Atari have publicly stated they screwed up by not advertising in the past and intend to do more in the future.

One likely cause is one of the socketed chips is making bad contact to the socket. Unless he reseated all of the socketed chips when he checked the "connections", I would suggest you have him open the ST and press down firmly on all of the socketed chips. Sometimes you can't even feel the chips move, but the pressure is enough to fix a poor contact.

Ok here is the latest gaming/Jaguar news. Everyone see
CNN and the new game system comparison? They said 3D0 was in money
trouble and the Jag was the techo Top Gun. Also if you want to get
cheap 3D0s Babbages will be selling lots of refurbished defective
3D0s sometime soon!

No mention of Commodore CD32 although a couple weeks ago the news said
that C= said they may be going out of business?! C= lost over $300
Million and have only around $5-8 million cash. My brothers friend
is a lawyer and also said Commodore lost a multimilion dollar patent
lawsuit earlier this year and owe Cadtrak and banks over $30 million.

hope this comes out ok

<[Host] ST.LOU> Before getting started, some business about how an
RTC works. While the RTC room is in Listen-Only mode, you can only
address our guest when I let you talk. To get my attention, just
/RAIse your hand. Just enter this from your keyboard: /rai

<[Host] ST.LOU> I'll acknowledge your raised hand as soon as I can,
but please be patient. I will let you know when your turn is coming
up.

<[Host] ST.LOU> Some other RTC commands are:

<[Host] ST.LOU> Welcome to the December edition of Dateline Atari
with Bob Brodie. I am going to keep my introductory comments REAL
short because the last time Bob joined us - so did over 100 people!
With that many people, some were disappointed that we ran out of time
and could not answer their questions. No doubt the focus of tonight's
Real Time Conference will be the Jaguar's outstanding rollout in New
York and San Francisco. I am sure Bob will talk about Atari's
fantastic success with this incredible product. Before beginning, I
would also encourage you 'gamers' to check out the new Jaguar CATegory
in the Bulletin Board. May I suggest you begin by downloading the

fast-accumulating archive files! Now, heeeeeeeeeeere's BOB!!!!

It's great to be on GEnie for our monthly Dateline:
Atari! Session. I'd like to take this opportunity to extend my
wishes for Happy Holidays to all Atarians. May this holiday season be
full of joy for you and those that you hold dear!!

We've got a lot to talk about as we head for the
holidays, and some of the much sought after Jaguar T-Shirts to give
away tonight, so let's get started!!

Tonight, I'm once again coming to you from the East
Coast. This session of Dateline: Atari finds me as guest of Ron
Kovacs of Z*Net News Service. Atari has sent me to the New Jersey/New
York area to visit the retailers that are presently carrying the
Jaguar. I'll be here for five days, returning to Sunnyvale late
Friday night. I'm grateful that Ron has opened his home to me for
dinner this evening, and to do tonight's RTC. This also marks the
first time we've had a Dateline: Atari

Following the roll out event in New York last month, we
began shipping the Atari Jaguar, our new 64 bit multimedia
entertainment system. Consumer acceptance has been outstanding, and
we are working to accelerate shipments to meet demand as quickly as
possible. Virtually every retailer that is carrying the Jaguar has
sold out their present allocation!! We will be shipping additional
quantities of Jaguars today, and next week. Our roll out hasn't gone
entirely smoothly, though. We have had some consumers report that
they had problems with poor image quality on the screen. Upon
investigation, we discovered that some of the RF switchboxes, which
were supplied by an outside vendor, did not meet our specifications.
We stopped shipping Jaguars briefly in order to remove the defective
switchboxes, while we acquired an acceptable replacement unit. The
new RF switch box is upgraded from the initial RF box, in that it is
an auto switching unit. In the event that there are people that still
have the defective switch box, they can call our 800 service number,
1-800-GO-ATARI. We will be happy to send them a new switch box at no
charge. For those customers that have already obtained another
switchbox, or do not wish to wait for Atari to replace their defective
switch box, Atari will send them free of charge their choice of an
S-Video or Composite Video cable. These customers should call
1-800-GO-ATARI, and return their defective switchbox. Please remember
that this 800 number is strictly a service number.

Atari regrets any inconvenience that this might have
caused our customers. On a personal note, I read a number of posts
on-line speculating that Atari might have utilized old RF boxes from
the Atari 2600, XE Game System, or other products. That's simply not
true. Ironically enough, if we had been as cheap as some of our
critics would have you believe, there probably wouldn't be any problem
with the RF boxes in the Jaguars! While this has been an
unfortunate happenstance, it does underscore the value of doing a test

market to discover any problems before going national with a new product.

The weekend following the New York launch event, Atari conducted a promotional event at the Newport Mall in New Jersey. We're pleased to report that the event was a tremendous success! Thousands of youngsters participated, and enjoyed a hands on experience with the Jaguar!! Atari is pleased to announce tonight that there will be another mall presentation of the Jaguar, this time at the Tanforan Mall in San Bruno , CA. This mall is located off of Interstate-380 and El Camino Real, not too far from San Francisco International Airport. We'll be at the mall on this coming weekend, December 11-12. Those of you in the Bay Area that haven't had a first hand look at the Jaguar should stop by this event. We'll be giving away Jaguar T-shirts, and Jaguar caps at this event as well.

I've been swamped with requests for Jaguar units for reviewers, the amount of attention that Atari is garnering for the Jaguar is simply _HUGE_. Atari has had the Jaguar showcased on the CBS Morning News, The Today Show, we're going to be on "Good Morning America!" during their hot Christmas gift giving segment the holidays. The Jaguar will also be featured in "Hi-Tech Toys for the Holidays" segment of the "Next Step" program produced by The Discovery Channel and KRON-TV, Channel 4 in San Francisco. Those of you in the Bay Area will be able to see this segment of "Next Step" on Friday, December 17th at 8:00 PM on Channel 4. Nationally, the show will be available on The Discovery Channel, which airs on Tuesdays at 9:30 PM. Show host Richard Hart is also the high technology reporter for KRON-TVs NewsCenter 4. KRON-TV is the San Francisco NBC affiliate.

The latest edition of "Die Hard Game Fan" is hitting the streets now, with Cybermorph on the cover of their current issue. Die Hard Game Fan reviewers made Cybermorph their Game of the Month, rating it 99, 98, 98, and 96!!! Be sure to check out this issue of Die Hard Game Fan, it has close to 8 full color pages of Jaguar coverage. They also review the next game due out for the Jaguar; Trevor McFur in the Crescent Galaxy, and a terrific poster of Cybermorph that their staff artist created!! The current issue of Electronic Gaming Monthly also has a "Future Wave" coverage of the Jaguar version of Raiden!! Trevor McFur in The Crescent Galaxy is due at Atari next week, with Raiden due in Christmas week. Evolution: Dino Dudes was the last of our titles to be released by our game testers, and should be in the stores shortly after Christmas. Be on the lookout for other Jaguar coverage in Game Pro, Video Games, ST Format, and ST Informer Magazines!!

On the review front, I'm doing the best I can to keep up with the demand for review units, but there are bound to be a few people that will be upset if they don't receive a Jaguar for review. If you have a particular publication that you feel would be useful for Atari to have the Jaguar reviewed in, please feel free to send me a

note in GEnie mail with your suggestion. I've been amazed at some of the publications that are excited about the Jaguar, including publications that normally just review video products, rather than video games. Atari has also been contacted by a number of more "mainstream" publications that are very interested in the Jaguar. Sometimes it feels like anyone that has ever written an article is queueing up to request a Jaguar review unit. We're being a little bit careful about where the units go right now. As our supply of Jaguar units increases, we'll be getting out even more units for review. For the time being, I'm concentrating on the magazines, with the newspapers and free lance writers taking a back seat.

On the Lynx front, this week will mark the beginning of the Lynx TV ads that we're going to begin running. These ads will be in the same markets (NY and San Francisco) where we are presently doing our Jaguar TV ads. The print ads for the Lynx have been running concurrently with the Jaguar ads. The Lynx print ads will be changing to reflect a new promotion that we're running for the Lynx - Buy a Lynx between now and Super Bowl Sunday (January 24th, 1994), and we'll send you a FREE Lynx NFL Football Game Cartridge! There are coupon pads being mailed to all of our retail partners now for this promotion. Your cost for the game is just $3.50 for shipping and handling. Be sure to check the next issue of Atari Explorer Online Magazine for all the details on this special purchase promotion. By the way, Atari Explorer Online Magazine is also preparing some very nice GIF pics of the pin outs for the S-Video and Composite cables for those of you that just can't wait for them to get to the stores! AEO will also have some GIFs of the Jaguar roll out event in New York very soon as well. They used a Migraph Color Scanner with a Falcon030 to scan some 35mm photos from the event. I'm sure you'll enjoy seeing them!

On the computer front, we continue to have an excellent supply of Falcon030s in stock. The new Migraph Color Scanner for the Falcon is really terrific, and Cubase Audio for Falcon is getting rave reviews in the Music field!! According to one of our rep firms, Cubase Audio has capabilities that would cost a Mac or PC owner over $7,000 more to obtain!

With that... I'm ready to conclude my remarks and take any questions, Lou. Let's get started!!

<[Host] ST.LOU> Before taking questions, a reminder that the Jaguar T-shirts will be given away to the 4 persons who answer the skill testing question. HINT: The answer is in that massive text file that Bob just uploaded :-) :-)
OK, here we go with Hydraxxus.

<[Hydraxxus] J.GERMAN3> Bob, as you may have seen I posted a question about other nets getting news about Atari before GEnie And complained that I thought this was THE place for Atari news....what's the scoop?
GA

<[Host] ST.LOU> By the way, folks... just one question tonight.

Hi Jim. Well I think what you're really referring to is
Sam's postings. He's been playing around with Aladdin, but not with a
lot of success. On the other hand, he was really impressed with how
easy CIM was to set up. I'm trying out some of the new things like
Oracle for GEnie to see if I can make it easier for him to get on
GEnie. He's using a Falcon, and an IBM laptop. He doesn't care for
Aladdin on either one. I'm in constant contact with AEO, and am
online as much as possible. But as I indicated in my opening
remarks, I'm out of the office now visiting retailers. That doesn't
leave very much time for being online. I'm trying to get here more
often, but it's tought. oops, that's tough. ga

<[Host] ST.LOU> Thanks, Bob. Give me a sec to record all the /RAI :-)
Swamped at the moment :-) Next we have Shadow.

<[Shadow] D.VANTREASE> What's the tentative release date of the CD
unit, and price? And will there be software bundled with it? (CD unit
for Jaguar, that is!) GA

Shadow, the CD is set for mid 94. At this point, we
envision a price of approx $200. No plans re the CDs at this point.
ga

<[Host] ST.LOU> On to Travis at Atari Explorer Online.

<[Noles #1!] AEO.MAG> Hi Bob, Ron. Bob, AEO thanks you for you
dedication to online users. You do a terrific job that many just can
realize. First, congratulations to Atari. The way it looks, the Jaguar
is already a winner with consumers. Bob, I suppose you have had time
to read the response to your letter to Electronic Gaming Monthly in
which they make some pretty interesting claims. Would you care to
respond to them tonight? ga

I thought some one might want to ask about that
tonight... When I wrote the letter to Electronic Gaming Monthly, I
was truly surprised that they told their readers that we were
responsible for the lack of Lynx coverage in their magazine. When I
saw the response to my letter that they printed, I was really upset!

First of all, you have to understand that prior to my
taking over the relationships with the game mags, they were handled by
Juli Wade. She had been asking EGM to return the Black Box that they
had for a couple of years. Every time she asked them to return it,
they denied having a Black Box. (We knew that they had one...our
staff in our Chicago office gave them one.) It wasn't until she
resorted to asking them to return it so it could be modified to work
with the Jaguar that they finally returned the box that they had
denied having for YEARS! And they have the gall to say honesty is the
best policy?!?!?!?

While they bemoan our supposed lack of support, we
agreed to meet with EGM Editor Ed Semrad the day after our initial

Jaguar press conference in Sunnyvale because he couldn't make it to the "real" press conference. Ed was given hours of exclusive, hand on time to question myself and Bill Rehbock, all without the hassle of the crowd that the other media had to contend with at the press conference. Ed makes regular trips monthly to the Silicon Valley to visit Electronic Arts, Sega, Capcom, 3DO, and other companies. I invited him to visit us on his next trip, but he chose not to. Instead, he returned to our office two months later, complaining about the fact that other mags had screen shots that he didn't. So even though other publications had obtained the shots that AEO had uploaded for us, I modemed all of the screen shots (close to 14 megs) to EGMs offices so Ed wouldn't have to mess around with a Syquest.

When EGM called to ask for a Jaguar unit so they could have coverage in their issue for CES, I personally got the unit shippped out from a Fed Ex office that accepts shipments past the normal cut off times. I sent them out a unit that had literally just come back in to the office from the Newport Mall event in New Jersey.

I'm very sorry that EGM seems to think they aren't getting proper support. The fact is that the support we've been giving EGM _IS_ what they need, but it is not what _they want_! Other magazines print reviews of Lynx games with the very same support from Atari. For EGM to say that they can't write about the Lynx simply isn't true. If they were really honest, they would have said that they WON'T write about the Lynx.

But then again, if they were really honest, they would have returned our Black Box when we asked for it. Instead, they denied having one for YEARS!

Mind you, this is the same magazine that constantly insults Atari in print. In one publication, they ran a column telling people what to do to get on the cover of EGM. One of the suggestions was new hardware always gets on the cover...unless it's from Atari. Another column ran the top ten reasons that the Jaguar will fail. There were two versions of that column. One of them ran in a sister publication of theirs called "HERO Illustrated". According to them, the number one reason that the Jaguar will fail was Sam Tramiel. I was shocked to see that they were so very personal, so nasty, in their attack on Atari.

The last time Ed was in our building, we discussed all of these things with him. Ed assured us that he just wanted to run a quality magazine from an editorial standpoint. Sam Tramiel personally spoke to Ed, and simply told Ed that he didn't know what the problem was between EGM and Atari. Sam asked Ed for a better relationship, and for all the nasty commentary to stop. We have even started advertising with EGM, like the other game magazines.

After everything Atari has gone out of our way to do, I'm shocked that Ed would be so arrogant, so very nasty in his reply to my

letter. If they choose to ignore the needs of their readers, that's they're choice. We've seen what happens to other publications that ignore their readers needs, and continually insult and belittle people in their publication, like STR. They burn _all_ of their bridges, alienating consumers and industry people alike, and then wonder why they don't get any information. I hope that EGM won't be foolhardy enough to continue down that path.

At this point, I recommend that you read Game Pro, Die Hard Game Fan, or Video Games to get the best Atari coverage.

<[Host] ST.LOU> Wow... were you expecting that question? :-)

Or of course, AtariUser Magazine. ga

<[Noles #1!] AEO.MAG> I think we all should give Bob a round of applause for the job he does. ga

<[Host] ST.LOU> Thanks Travis. Bob, let's welcome Nate to the RTC>

<[Nate] L.JESSE> Bob, first, what is Atari doing about third party licensees such as electronic arts and Capcom, etc.? Secondly, what options do i have, I'm from Illinois, to get a Jaguar before X-Mas? GA

Hi Nate, we've signed up over 35 licensees at this point. EA is not on the list yet, which is no surprise considering Trip Hawkins close involvement with 3DO.

<[Host] ST.LOU> Folks, there are 14 in queue. I will get to you ASAP. Thanks for being patient. GA, Bob

However, EA is really much more of a publisher, than a developer. We've gotten a number of licensees that have been published by EA, like Park Place. Re Capcom, they have requested a development unit, and we're expecting to have a meeting with their staff in Japan at some point.

<[Host] ST.LOU> REMINDER... the answer to our T-Shirt Draw question is in Bob's opening remarks.

Being from Illinois is tough right now. I was reading in the BB earlier tonight about a number of people being told by Babbages that we had dropped the ball. I'm certain that this is just a misunderstanding by the personnel in the store. We've been very clear with their corporate management that we would prefer they restrict their shipments into just SF and New York. If they go out of those areas, they are diluting the product availability to the target areas. ga

<[Host] ST.LOU> Thanks. Now Sam RAPP!

<[Sam_030] SAM-RAPP> Bob... When will you be shipping Jags to those of us that ordered from Atari Direct? It has been almost a month since you charged my credit card! I figured you were waiting for the

next batch of T-shirts, so you could send one along! Would it help if I had only ordered the console, instead of an extra controller and two other games? Thanks! GA

Hi Sam, the Jaguars will be shipped to you so that they will arrive before Christmas. I wish I could be more specific, but I cannot give you a more accurate statement at this time. Remember that the units are really being shipped by IBM. So for the orders that are sent out from Sunnyvale, we have to get a shipment from IBM before we can ship, too. ga

<[Host] ST.LOU> Ooops, I missed Hal. Here he is now. GA Hal.

<[Hal] H.SCHEIE> I have a Jag on order from J&R, I'll get it in their next shipment .Any chance it will be this week?

I don't have the exact allocations on hand, Hal. I believe so, but can't guarantee that. Please, remember that I'm NOT in the office right now. ga

<[Host] ST.LOU> Sean from Processor Direct

<[Sean@TWP] P-DIRECT> Good evening Bob, easy question for you tonight: Are any developers are making an indepth flight sim for the Jaguar, and if not could you pass the hint on to them? GA

Can you say Microprose? ga

<[Sean@TWP] P-DIRECT> Not chopper.. GA

Fighter sims, jet sims, etc.

<[Host] ST.LOU> Sounds good to me. Next we have Ken.

<[Ken] K.STEVENS1> Hey Bob, still waiting for my direct order Jag (hint, hint). Question, how many titles are being developed/ready for the Jag CD? (By the way,how do you give a round of applause on a computer?) ga

Ken, I know of several titles being developed, but I'd rather not get into specifics right now. They are just getting up to speed on the system. Remember, CD games take around 500+ megabytes of data. That's a lot of stuff to develop. ga

<[Host] ST.LOU> Moving along to Kid Metal.

<[Kid Metal] M.MURPHY31> Howdy from Texas, Bob. Will the INcredible Universe in Dallas get any Jags to sell before the national roll-out? GA

Yes ga

<[Host] ST.LOU> Oh..... Mark Warner is next. GA Mark. Welcome

<[Mark Warner] M.WARNER8> Bob, can you tell me what other games beside Alien v Predator are due out in January? I also want to comment on

how impressed I have been with way Atari has handled the RF problem. (whoops thats "with THE way") ga

Thanks Mark. I've been really tied up getting out and dealing with the review unit issues, so I'm about a week behind in that info. Maybe more. At this point, I know that we're hard at work on Tiny Toons, AvP, and Club Drive. But after AvP, I'm not sure about release dates. ga

<[Host] ST.LOU> Charles Smeton of NewSTar is our next guest, Bob.

Hi Bob. Thanks for sending Crescent Galaxy, an extra game controller, and the Jaguar T-Shirts and Hats to the ToadFest. Toad Computers donated a Jaguar that was raffled off and which raised over $500 for Habitat for Humanity. The Jaguar was the main attraction at the show. With the Jaguar being the main focus at Atari, I have heard numerous rumors that the outside of TT's for Jaguar Development Kits, there is little to no activity on the computer end of things at Atari. As a developer with a vested interest in the computer end, do you have any encouraging words? GA

Charles, we're still very interested in the computer business. We're looking for applications that will give people a reason to select an Atari over the competition. Programs like Cubase Audio do just that. We don't have any intention of giving up on the computer business. But in order to do the Jaguar properly, it's requiring just about all of our resources. At least in the manpower segment. ga

Thanks Bob, I just hope that we can hang in there until the resource allocation shifts a bit ;-) ga

<[Host] ST.LOU> Thanks Charles.

Charles, me too. Me too. Please keep... in mind that we've also publically talked about using the Jag as a CPU at some point.
<[Host] ST.LOU> Next we have Hydraxxus... then Hassen

<[Hydraxxus] J.GERMAN3> Earlier you mentioned MP. Did you mean to say you would pass the word or that they were working on titles? (Clap, clap, clap {for the Jaguar, it's a great machine, I like mine}) (nice tie)

Jim, they are working on titles. Glad you like your Jaguar...I wish I had more time to play!! ga

<[Host] ST.LOU> Now Hassen

<[Hassen] H.HAMMOUD> Hello Bob. I was in Toys R us on Friday here in Indiana. They had no Lynx carts at all, nor did they expect to be getting any. What's up? Also, will there be an Asteriods port to the Jag???(I still love that game.) GA

<[Hydraxxus] J.GERMAN3> Gee, free question?

Hassen, we've had a problem with the Lynx in Toys R Us
for quite awhile. However, that has been resolved, and they will be
getting them, along with some promotional material regarding the Lynx
NFL Football game. ga Re Asteroids, we're talking abouti t. ga

<[Host] ST.LOU> OK On to Matt Rivman.

<[Matt] M.RIVMAN1> Hi Bob, and thanks yet again, for being here! The
question is just a bit off the Jaguar topic... Any ideas about the
late financial statement from Atari? I'm a somewhat new investor and
would like to keep up! GA

<[Host] ST.LOU> You folks are being terrific... and patient. Still 15
in the queue.

Hi Matt. We've been so busy with the press of business
for the Jaguar that we asked the SEC for an extension to file. We
should be releasing the numbers very soon. ga

<[Host] ST.LOU> OK, now we have J.Hardie.

Bob, does Atari have any plans to attend the January CES in
Vegas? Also, how about filling us in on the Crescent Galaxy cheat? ga

Yes, we will be at CES in January in our own booth.
Because the booth allocation occurs so early, we didn't get a prime
space. So our booth will be small, but we'll probably have at least
one suite, too. Re Crescent Galaxy...if I told you now, it'd ruin all
the fun for everyone else! :) Suffice it to say that it requires an
extra controller, and there are some specific codes you input for
things. ga

<[Host] ST.LOU> Time out, Bob. If you folks have already /RAI but
were not acknowledged by me, please /RAI again now. I think I have
everyone in queue.... On we go to Jungle Jim.

<[Dave] D.SMITH200> Bob, are there any plans to interface the Jaguar
with existing Atari computers to handle I/O processing for advanced
graphics applications? If not, it might be something to consider... ga

<[Host] ST.LOU> What just happened? hmmmm.....

Dave, we're certainly interested in using the Jaguar
technology across all of our product lines.

<[Host] ST.LOU> Dave, what is your Job #

And we've had a lot of "feelers" from other people
looking to use it on their systems as well. ga

<[Host] ST.LOU> Oh oh... Jungle Jim was 51. JJ... please /RAI now to
get your question There he is....!

<[Jaguar Jim] J.THORNHILL> Bob, while in N.Y. did you happen to stop by ACCLAIM's offices for a little 3rd party chat? Yes, sorry!

<[Host] ST.LOU> GA Bob

Actually, their R & D office is in Chicago I think. :)
I've got a pretty full schedule, Jim. Mostly with retailers and the press. Bill Rehbock will handle the developers. ga

<[Host] ST.LOU> Here's Travis!

<[Noles #1!] AEO.MAG> Bob, I'm sure that the "make good" policy on the switchboxes and the extra A/V cables will go a long way to showing people that Atari Corp. is deadly serious about satisfying its customers. Are you having to visit all the dealers in the NY area, or just the regional offices? (If you weren't so busy, I'd ask you for a report for the next AEO.) ga

Well there are over 150 dealers in the NY area. And I'm only here for 5 days, so I won't get to all of them. But I am visiting the stores, not the regional offices. We have a rep that is doing that. Thanks for the kind comment about the switch boxes/cables. We're upset about it, too! Heck, we paid for the bad stuff just like our customers did!!! ga

<[Host] ST.LOU> T. Lipsky. Step up to the mic GA T.Lipsky

Bob, Microsoft has expressed intrest in the home market including Childrens software, has Atari been approached by Microsoft regarding the JAguar. ga

No comment. ga

<[Host] ST.LOU> OK... then we have L.GRACE next

Hi Bob. will the success of the Jag help fund marketing for TOS machines? i.e. Falcons. Thanks GA

Yes, in fact we have talked about at some point using the Jaguar chipset for a TOS machine. ga

<[Host] ST.LOU> On to Harj Nagra from Toronto!

<[Harj] H.NAGRA1> When is that Kasumi Ninja game due out? And how does it compare to Mortal Kombat?

Again, I'm a little bit behind on the software release schedule right now. I suspect that it might be the late 2nd quarter. It's designed to be a competitor to Mortal Kombat and Street Fighter II, with lots of blood and gore. :)

<[Host] ST.LOU> GA, Bob?

Nope..just clearing the capture buffer. ga

<[Host] ST.LOU> Steve Johnson is here....

<[DrHfuhruhurr] STEVE-J> Have any new retailers (and developers) signed on that you'd care to mention? There is talk that Sears, Montgomery Ward, and even the vehemently anti-Atari Software Etc. are getting a bit of an itch to carry the Jaguar. GA

Sears and Montgomery Ward are coming on board during the national rollout. Software Etc. is not on the list at this point. We have a few other developers that we signed on, but I want to hold off on the announcements so we can coordinate everything properly with their PR firm. One of the other retailers that I think is very interesting is Blockbuster Video. ga

<[Host] ST.LOU> Apollo is next.

<[Apollo] N.CHANDLER> Modem? Head to Head? Multi-Player Network(s) (Like here on GEnie)? Any plans for this type of gaming? :)

<[Host] ST.LOU> GA Apollo.

Yes, yes, yes!!! In fact, we think that some of the multiplayer networks espoused like the Sega Channel might be better served by a cartridge that allowed you to dial into GEnie to play online games here! The keypad on the controller is perfect for that kind of stuff!!! ga

<[Host] ST.LOU> We're going to Shadow, then our draw question.

<[Shadow] D.VANTREASE> Bob, when will the S-Video/composite 'adapter' be available, and can I order it directly from Atari? Every time I call, they say they have stopped taking orders! Know a price on the adapter? Also, any _longer_ cables coming? (AvP date? :-)

It really isn't an adapter. It's a cable that plugs on to the A/V connector on the back of the Jaguar. The S-Video and the Composite units are not the same. They are separate cables. You will be able to order it, but we're not taking any more orders on Jaguar product at this point until we have fulfilled the orders that we have in hand. I'd guess (emphasis on guess) that the cables will go for around $15-20. The pricing hasn't been set yet. ga

<[Host] ST.LOU> After the contest we have K.Swift, Rob Anisko, P.Irwin, Nate, Chris C., Steve-J, Hassen, T.Hebel and C.Oates. Did I miss anyone? use the /RAI now! OK

ga

<[Host] ST.LOU> I added jobs 33, 10, 25, and 23 to the queue. That will be it for tonight.

Now for the contest.

The Rules:
Only paying members are eligible! No free accounts :-)
Bob will post the question.
Type your answer and don't hit RETURN until

you see that the room is in TALK-MODE.
The first four correct answers judged by Bob and Ron
will win a FREE Jaguar T-Shirt!
OK Bob.... the question please!

In my opening remarks, I mentioned that Atari is now
doing a special offer to people that purchase a Lynx between now and
January 24, 1994. What is the FREE game that you get when you
purchase the Lynx?

<[Host] ST.LOU> 60 seconds.

30 seconds
15 seconds
10,
** <[Host] ST.LOU> Room is now in the talk mode.

** <[Host] ST.LOU> Room is now listen-only.

<[Host] ST.LOU> Ralph's World??? :-) OK Bob.... check your buffer and
declare the winners. after I let you talk.... :-) GA Bob :-)

The winning answer was NOT Flaming UPS Trucks in
Jacksonville.

<[Host] ST.LOU> Hahahaha

The correct answer is NFL Football.

<[Host] ST.LOU> Jacksonville Jaguars? OK... looks like Sean D.

The winners are: P-Direct, P.Hanze, Sam-Rapp, L.Hinsley

<[Host] ST.LOU> Phil Hanze, Stargazer and Sam! Congratulations.
Please send your mailing addresses to ST.LOU and I will forward
everything to Bob. OK? Bob is NOT in Sunnyvale right now.

Sam really doesn't want the shirt. He just wanted to
win.

<[Host] ST.LOU> Not much! :-)

:)

<[Host] ST.LOU> Oh... and send your sizes!!!! with your addresses.
King, what size for you? :-)

Congratulations, gang! You're gonna love 'em. Very high
quality Hanes T-Shirts. If you're an XXL, don't be shy about it.
I've got 'em.

Mine is an XXL and it fits all 320 pounds of me.

<[Host] ST.LOU>a I am getting some very funny /sends :-)

<[Host] ST.LOU> OK....

Yeah, but you gotta dry clean it, King.

<[Host] ST.LOU> Now to finish off the queue. NO MORE /Raises please.
K.SWift

<[Kim] K.SWIFT> Is Atari planning a computer based on the PowerPC chip
set? I want to buy a computer in summer 1994 and that's when the
PowerPC is coming out. To be honest, I'm very tempted. I'd like to
see an AtariPOWER system for s/w compatibility.

<[Kim] K.SWIFT> ga

We've talked about it a lot, Kim. We're longtime
partners with Motorola, and now with IBM, the Power PC becomes very
tempting. However, the Jag chipset is VERY appealing, too. At this
point, we haven't decided. ga

<[Host] ST.LOU> Rob Anisko is next.

<[Zombie] R.ANISKO> Bob, just curious about the origins of Microsoft
Arcade, or that is, how 5 classic Atari games landed up on the old
Windows platform? just hearing about this made me go "hmmm" :-)

<[Zombie] R.ANISKO>

<[Zombie] R.ANISKO> ga

We did a licensing deal with Microsoft so they could do
the arcade stuff. :) ga

<[Host] ST.LOU> On to P.IRWIN

<[Host] ST.LOU>

Hi Bob got my jag. today and it was defective :(

<[Host] ST.LOU> How so?

Butto my question When can we expect everything to hit the
stores... (controllers, CD drive, Cables and such..) (Left Bob e-mail
on how the sound goes beserk) ga

<[Host] ST.LOU> Thanks.

I'm sorry to hear that you're unit was defective.
Unfortunately, that does happen from time to time to all
manufacturers. How was the unit defective? The second controllers
will be available in just a couple of weeks, the CD ROM is due out the
mid part of 94, and the cables will be in the stores the end of
January. I'll look for the email on the unit. Thanks! GA

<[Host] ST.LOU> On to Nate

<[Nate] L.JESSE> Hey again Bob, first of all, 'kudos' on the GEnie
online idea, I love it. Secondly, is Atari planning any character to
represent them? Such as Nintendo's plumber, or Sega's Sonic? How
about Jinx the Jaguar? ga

At this point, we're just sticking with the black Jaguar,
Nate. Once you see the box, you'll have a good vision for how it will
look. All of our marketing efforts are using the black background
with the cat eyes logo. as well as the red JAGUAR logo with the
slashed R on it.

I think it would be neat to see a Jaguar game a la Sonic or Mario. We
do have a Lynx (Cutter) in Trevor McFur in the Crescent Galaxy. Glad
you like our modem idea...some of the phone companies/cable companies
are not as pleased! :) ga

<[Host] ST.LOU> Chris Cassaday... NOT a winner tonight :-)

<[Parrot Head] C.CASSADAY> Bob, with the test market shipments
reaching full capacity in late December, does that push the national
roll-out back any? It would seem that it would take a few weeks
before a 'true' nation-wide tendoroll-out was in force. BTW, I second
Charles Smeton's remarks about 'sending out Crescent Galaxy and the
shirts and hats to the TOAD fest. I had a really great time, and have
a "way-cool" Jaguar hat to show for it. ga...

Hi Chris, glad to hear you got a hat...they're rarer
than the T-Shirts!! Boy, am I getting /sends about the hats now!

<[Host] ST.LOU> Did you get my /send ? :-)

:) I don't expect it to cause a delay. We're actually
getting more up to speed. ga

<[Host] ST.LOU> Steve Johnson is back with another question.

<[DrHfuhruhurr] STEVE-J> NINJA GAIDEN III is the next game to be
released for the Lynx, but do you have a date for it (and others
forthcoming -- hopefully SUPER ASTEROIDS/MISSILE COMMAND and ULTRA
STAR RAIDERS (???), among several others)? By the way, I'd like to
pass on the suggestion to air a few 'well- placed' teaser ads
nationwide this Xmas to maybe take some of the OTHER system sales
away!

Ninja Gaiden III _should_ be here already, I'll check on
it when I get back to the office. I haven't heard of Ultra Star
Raiders and the other titles you mentioned as ones that are going to
be ready any time soon, Steve. Thanks for your suggestion about the
ads, but that would just compound the frustration of people that want
Jags that can't get them at this point, Steve. ga

<[Host] ST.LOU> Hassen returns....

<[Hassen] H.HAMMOUD> Bob, just exactly _when_ is the National Rollout?
Also, anyway one could purchase a Jaguar T-shirt or cap? I bought an
old Atari jacket from Telegames and my nephew loves it!

It will begin toward the end of January, and we'll have
T-shirt, caps, and OTHER GOODIES available for sale then. :) ga

<[Host] ST.LOU> T.HEBEL

<[Spud Boy] T.HEBEL> How many Jags have been made so far... In round
numbers. Also I have heard rumors that you could use the Lynx with a
Jaguar somehow, is this true?

<[Host] ST.LOU> C.OATES ans Sir Fransis follow

Spud Boy, again...I'm not in the office. I do know that
IBM released a bunch of machines today for delivery, but the numbers
aren't on hand. Yes, you will be able to use the Lynx with the
Jaguar. The ports for the Comlynx port are on the expansion bus of
the Jaguar. You will have a special cable to connect from the Jaguar
to the Lynx. We forsee you using the Lynx as a controller for Jaguar
games. ga

<[Host] ST.LOU> Bob, I am told that there were no Comlynx ports on
the Jags at Toad. Can you confirm that? The expansion bus is inside?

The Comlynx signals are on the expansion bus, Lou. Every
Jaguar has one. There isn't a Comlynx port per se on the Jaguar, but
just as you have a S-Video or a Composite cable, you will have a cable
from the expansion bus. It's on the rear of the unit, clearly
accessible from the outside, not internally.

<[Host] ST.LOU> Oh, now I get it! Back to hosting.... :-) Chris Oates

<[Chris] C.OATES2> 1) You mentioned Blockbuster as a retailer. Does
this mean Jaguar games for rent? 2) Any chance of eventually using
Jag + CD as a CD rom for my Falcon? I don't want to have to purchase
two CD Rom drives. GA

Hi Chris, yes...It does mean that you will be able to
rent Jags. They'll also be selling them, too. Re the Jag CD, I don't
think so. The Jag CD is intended to be plugged into the cartridge
port of the Jaguar, and then pass thru for another cartridge to go
into. ga

<[Host] ST.LOU> On to Sir Fransis

<[Sir Fransis] K.DRAKE> My ship pulled into port late! :) Do you know if Atari plans to offer a special deal next year and pack the Jaguar with a CD ROM unit at a lower-than- separate price? GA

Oooooh, have you been talking to one of my co-workers???? :) Well, we have a couple of ideas for the CD. :) I want to point out that these are just ideas, we haven't decided on anything in particular yet. Nah, better not.

<[Host] ST.LOU> Go for it!

Ok, what the heck...

<[Host] ST.LOU> :-)

As you know, the Jaguar CD is also capable of playing Music videos. We're working with some of the musicians we know well to do music on the game, and include a music video with the cd. But that's not cast in stone. ga

<[Host] ST.LOU> Mike wants to know if these are RAP artists. He LOVES RAP music!

All of em.

<[Host] ST.LOU> Next we have J.HARDIE

Bob, I've heard rumours of special controllers being packaged with some games, most notably TEMPEST 2000, what can you tell us about this? ga

Wow, a lotta ANTI-Rappers here tonight!

<[Host] ST.LOU> Four more question, Bob! Mike, calm down :-) Hmmm, /RAP Mike.

Hi J.Hardie, Tempest is still a way out, but we're certainly looking at special controllers. We've also have a few people that are talking about separate controllers to do other things like fighting games. ga

<[Host] ST.LOU> Back to Jungle Jim.

<[Jaguar Jim] J.THORNHILL> 1) Dpo you know why Babbages is telling some people that the CD unit will be $400.00 and 2) Does the Jaguar fit into SGI and Warner's plans for a cable TV bix of some sort they are working on? GA

Jim, I don't know, but I will talk with our people that are working with Babbages. We haven't set the price firmly on it. So there really isn't any concrete info, just speculation on their part.

<[Host] ST.LOU> Three more questions, folks.

Re the Cable thing...well it's this way. If you follow the San Jose Mercury News (which is the hot paper in the silicon valley), one day the cable multimedia thing is the hotest thing going,

the next day it's over-rated. We're talking with a number of people about it. But so far it's just talk. ga

<[Host] ST.LOU> Ken Stevens is here. Welcome, Ken.

<[Ken] K.STEVENS1> [A[A[D[DBob, one more question on the Jag CD. With the potential release of the Sega Saturn (64 bit with built in CD Rom) in late 94, how will that affect the release of the Jag CD? Thanx....GGGGGAAAAA!!!

<[Host] ST.LOU> Bob, ignore those /sends for now :-)

Ken, it depends on what version of Saturn they release. :) At first they said that it was a 32 bit machine, now they are saying 64 bit. Actually, it really isn't going to impact Jag CD at all. We're of the opinion that the Jaguar offers the best of both worlds. The Jaguar carts are faster than CDs, and hold the most data of any cart system in the world!! ga

<[Host] ST.LOU> G.SAUNDERS is next.

3DO Crash and Burn has "CD-ROM lag"; how will the Jag avoid this problem?

<[Host] ST.LOU> Then Matt Rivman will wrap it up for us.

I played that at a "Nobody beats The Wiz" today and noticed the same thing. Two ways, #1 Double speed, #2 Cache. There won't be much noticeable slowdown. If you have seen other CD games, you've seen the "LOADING" message on the screen. We don't need that. :) ga

<[Host] ST.LOU> OK, my buddy Matt Rivman has the last question for tonight.

<[Matt] M.RIVMAN1> Bob, I just wanted to know what I can go back to my local Babbages and tell them in reply to their statement that Atari short-shipped their distributor?? And will Atari be sending 'pro's' to the stores to demo like 3DO did? (oops! thats2)

Great to have friends, eh Matt? First of all, Babbages doesn't have a distributor. They deal directly with us. Second of all, it appears that they are shipping around the country, not just to NY and San Francisco. That's not what they were supposed to do. And I guess you missed my opening remarks, I'm in NY visiting retailers all this week. I guess that makes me a pro like 3DO. :) ga

<[Host] ST.LOU> Whew! A record number of questions _and_ we managed to hold a contest in the middle! Bob, thanks for taking the time, once again, to bring the latest Atari news to GEnie's ST RoundTable. I hope our guests enjoyed the evening. I sure did! I look forward to the January edition which will likely be moved off the long weekend (I hope). Actually, it will be on the 7th, right? Anyway, it was great to have Bob and Ron online with us tonight. Have a great holiday

season with your families. GA

Once again, I have enjoyed our time together here on our official online service, GEnie. These Dateline: Atari! Sessions have become a monthly event that I truly look forward to each and every month. It's been wonderful to see the high level of interest in the RTC each month! That's a tremendous source of encouragement to me as I prepare for it!!! Thank you once again for attending, and may you all have the most wonderful holidays ever! Goodnight, and thank you!!!

3227. First Spacejunk, now Humans!!

Newsgroup: comp.sys.atari.st
Date: 1993-12-09 11:51:59 UTC
From: pd@mbuc.bio.cam.ac.uk
Message-ID: <1993Dec9.115159.25878@infodev.cam.ac.uk>
Source record: 197049

First we had the _amazing_ Spacejunk demo.
Now we have another, the Humans demo.
It is smaller (only around 3.5Megs uncompressed!) but is very impressive and very funny!
I wonder what will be next?

Does anyone know how to reach Imagitec? (the authors)

I want these two games whether they are for the Falcon, Jaguar or (hopefully) both :-)
BTW I also wantto buy a Jaguar here in England but I guess I will have to wait a while. Nevermind, it will be worth the wait...

Phil
(E-mail pd@mbuc.bio.cam.ac.uk)
--
It's 106 miles to Chicago, we've got a full tank of gas, a half a pack of cigarettes, it's dark, and we're wearing sunglasses.

Hit it.

>So OK, now what is it? I'm totally confused!
>
>Can someone who knows really describe this machine? Yat was kind enough
>to upload the specs, but there are still some questions that pop to mind.
>
>What IS bus snooping? :-)

A bus snooper is simply a device that watches the system bus. If a write
is made to main memory, (i.e. the system bus, and not the local bus which
the cache is on has been used) the snooper checks to see if the local
cache has a copy. If it does, then the valid bit in the cache is reset.

This method is used in the 80386 - the 82385 sloop bus controller

From: dwhite@rd.eng.bbc.co.uk
Message-ID: <CHrrwM.tF@bbc.co.uk>
Source record: 197053

Instead of merely bringing out a '040, a falcon with a better processor and that's it, how about an architecture that allows for modular hardware upgrades? Most Ataris seem to offer no standards for customisation. It would be a mistake to limit such a machine.

D. White.

True. But I did see a *TV* commercial for the Jaguar in PITTSBURGH PA about a week or two ago (last time I was there) during an episode of Highlander...

And saw ol' Sam T. in a small segment on CNN's Business show (whatever it's called). Basically, a similar story to others mentioning the Jag - they mention the 3DO, then at the end talk about the Jag being its main competition (and pointing out the price difference)...

I know Atari's track record (been following it since the 2600). But one can hope that perhaps the Jag is something that even Atari can't miss the boat on. Time will tell...

How does one read data via the BIOS/GEMDOS from the parallel port on the ST? Bconin() on the parallel port does not work/is not documented as supported. Anyone know better? Code fragments gratefully accepted!

The 68040 takes it one step farther and updates it's internal cache with
the data the dma device is sending to memory.

Did you ship it with either a floppy disk or the original plastic
insert in the drive? If not, it's possible that either the heads
or the transport mechanism could have been damaged by shocks in
shipping.

I'm dubious whether UPS would pay for this type of damage, since
they'd probably consider it to be improperly packed.

|> should cut down the price. Maybe there's an Atari FAQ somewhere that
There is indeed an Atari FAQ that gets regularly posted here. I'm not sure
where you could get it from inbetween whiles. At the moment Atari only make
falcons and TTs both of which are expensive. AFAIK, they have ceased production
of STFMs and STE models although I may be wrong on this. In the Uk you can
still buy these machines though, and very cheaply,
Apart from the TT & Falcon, the ST hasn't really changed much since you last
looked at things ie it's still a 68000@8mhz with lo/med/hi res although now you
get stereo sound and 4096 colors instead of 512. Otherwise it's essentially the
same.
To be honest, unless you had a major need for a peice of software that ran on a
TT or needed the multimedia capabilities of the Falcon, you'd be a bit mad to
start using an ST from scratch. The software isn't much cheaper compared to PCs
these days and PC hardware is much cheaper for a given spec. If you want to get
to know the 680x0 though, it's still a valid choice.

3240. MiNT and Minix XFS and software

Newsgroup: comp.sys.atari.st
Date: 1993-12-09 14:25:40 UTC
From: vctec@westminster.ac.uk
Message-ID: <CHruLo.3po@westminster.ac.uk>
Source record: 197059
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello again dear netters,

Another problem from a learner in the Atari world ;-) Hope you all do not mind.

I am thinking of installing MiNT on my hard drive (using the Distrib kit by Simon Gornall), and have a choice of installing all the binaries and libraries etc on a Minix XFS partition.

What I want to know, is how stable this would be, and what size partition I should keep for this?

Or should I just scrap the idea, and install everything on TOS partitions? The good thing with a Minix XFS is the long filenames just like Unix.

I am going to install Gnu C, C++, Smalltalk, SB Prolog, Tex, and Ghostscript, along with EMACS and Vi, Heat n' Serve Sozobon C., tcsh, bash, csh. The Distrib Kit installs Gnu C 2.1 (I think), and at the mo, during the test stage of my installation, I have it as a Minix partition. Is it advisable to put all thewse under a Minix partition?

All other software is not really a problem as I will install them under TOS partitions (word processors, dtp, gdos fonts, screensavers, packers etc) Or should the packers go under Minix partition?

What are the pros and cons of using a minix partition, apart from the fact that I will not be able to access it without MiNT?

I have a 2.5 Mb STe (using a patch program), and would like to know what to avoid before I reformat my new 245 meg Hard Drive and install stuff on it. It is running TOS 2.06. I'm sure that MiNT uses a lot of memory and maybe I'll be pushing it trying to work Tex, GCC, Smalltalk and Ghostscript under it.

e-mail to Simon Gornall at King's doesn't help either, as it is returned with user unknown, even though the directory lists his name.

Anyone noticed with TOSWIN, that if you have a process running under it, and close the window, and try and inspect a text file, then only half the screen is displayed? Any ideas why?

Thanks in advance for any replies.

Danny.

GEM SZRZ 2.28 will be removed from atari.archive.umich.edu, as this version is not shareware. This was unknown to both myself and the person who emailed it to me (docs are in German). At this time, the last version of GEM SZRZ that is shareware is 1.9b, which is available from atari.archive. Sorry for the inconvenience, and thanks to those that informed me of my mistake.

Though this was certainly not my intent, I did get a chance to evaluate the non-shareware version, and can state that it is really good! It seems to be to keep up with the Connect Zmodem implementation (or real close to it), which is the best I had previously seen. I get 1550-1600cps sustained during binary downloads on a 14400 v.32 modem/Mega2ST, and it has lots of nifty command line switches that 1.9b did not have. Also, the GEM dialog is much improved, with a "fuel gauge" type graph on the bottom (a la Macintosh) and the ability to turn off the mouse interrupt.

Version 1.9b, along with some Uniterm macros I hacked together for use with GEM SZRZ, are also available via ftp from ftp.math.fsu.edu (192.12.122.28).

Me too!

Do any existing drivers (eg Epson 24-pin?) make full use of all its features? Most important to me is a driver for PageStream which will drive it at the highest resolution.

From: saj@chinet.chinet.com
Message-ID: <CHrxq9.Jtr@chinet.chinet.com>
Source record: 197068
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm gradually getting a decent programming environment set up on my Falcon. The next step is setting up the libraries properly for the GNU compilers. How do the various freely-distributed libraries interact? Can the the GNU compilers use the Lattice C libraries? I presume that mintlib should be searched before gnulib, but do I need both? Any preferences between gemlib and gemfast, or have they in fact converged? For that matter, to what extent do I need to specify libraries in the command line or makefile, and what do gcc and friends search by default?

Does an attempt to add gem++ to the stew have any influence on the rest of this stuff?

Yeah, I collect compilers. Sometimes one does a better job than another for a particular purpose. Right now I'm focusing on getting the GNU C compiler from its present 'works' state to 'works well'. I read documentation, but right now I'm kinda overwhealmed by large amounts of it scattered in too many different places. Pointers may be even more useful than explanations.

>
>Cheers, y'all: Steve ;-)

The STBook had a production life of 5000 units, sold mostly in Europe. The machine didn't have a backlight so didn't think the unit would sell. Having tried using my STacy without the backlight, I can see why.

The STacy is more abundant, but no longer made. They crop up here and there. Two were sold on comp.sys.atari.st in the last month or so (I bought one of them).

The STacy is basically just a "portable" ST with the addition of an internal SCSI hard drive. It has ALL the ST ports, a monochrome monitor, internal clock, upgradable SCSI, TOS 1.4 and can run off of battery (short life) or power.

The STacy is called a "luggable" rather than a portable. It is about the size and weight of a portable typewriter. However, it's one hell of a lot harder to carry an ST, monitor and external hard drive around in a backpack than it is a STacy! :)

Well, there's a big difference between the screens on the two machines, and the comparison you've drawn is unfair (and incorrect).

The STacy screen is transmissive, good for back-lit technology, but lousy when relying on reflective light. On the other hand, the ST Book screen is reflective, and as long as you have sufficient light for it to reflect, works very well.

In fact, I had an interesting experience when I first saw the screen on the ST Book. My initial reaction was that it was the worst LCD display I had ever seen: poor contrast, murky gray on murky gray. After looking the machine over a bit I found a tiny edge-mount knob under the keyboard that varied the contrast to match the angle you were viewing the screen at. When I rotated it, I was taken aback, because the display became so bright and contrasty I was sure I had just found a back-lite bright-ness knob and turned it up to full. It was that good.

Of course, this was in a brightly lit arena, at a computer trade show (I think it was the Chicago Atarifest). I do have to wonder how many people walked by, looked at the ST Book, and decided that the display was pathetic, because they didn't know about the contrast knob.

I would have had no problem living with the non-backlit screen on the ST Book. In fact, I'd take that tradeoff for the 8-10 hour battery life. My real problem with the machine was that Atari just wanted _way_ too much money for it, considering the pricing levels of other available notebook machines. And I'm including the Apple line. If they'd priced it at a reasonable level, with 4 megs of RAM, I would have bought one. Even now, I'd consider a used 1-meg ST Book, if it was cheap enough and included all the necessary cables to attach to the microscopic (and non-standard) connectors.

It's interesting that you don't see anybody advertising any of those 5,000 used ST Books for sale. I guess they must have been pretty bad, if nobody wants to part with theirs?

3252. ST Games for Sale

Newsgroup: comp.sys.atari.st
Date: 1993-12-09 16:39:36 UTC
From: dmk@air16.larc.nasa.gov
Message-ID: <2e7kc8$qbk@reznor.larc.nasa.gov>
Source record: 197072

Hi netters,
I have the following games for sale. Each one sells for
5 dollars and that includes shipping in the continental
USA. There is NO warranty with these games. If you want
me to try them on my Atari STe v1.62 TOS before sending
them out, please let me know. Please be advised that if
you do ask me to check them out, I may not be able to
ship this month (Christmas is a VERY busy time for me).

Battletech, The Crescent Hawk's Inception
Sherman M4
PowerMonger
Wayne Gretzky Hockey
Magic Fly
Speedball (no box)
Speedball 2, Brutal Deluxe
Exterminator
Damocles
M1 Tank Platoon
Midwinter
Midwinter II Flames of Freedom
Gunship
Driller
Prince of Persia
Powerdrome (Box is beatup)
Gods
Leatherneck
Moebius
Captive
F-19 Stealth Fighter
TechnoCop
Mickey Mouse the Computer Game
Gauntlet II
Super Cars
Menace
Blasteroids
Blockbuster

Adventure games (also 5 dollars apiece)
Manhunter, New York
Manhunter 2, San Francisco
Police Quest The Pursuit of the Death Angel
Police Quest 2, The Vengence
King's Quest II, Romancing the Throne
King's Quest III, To Heir is Human

Trinity
Stationfall

-- In the 10 dollar column (includes shipping) --
Challengers collection includes:
Stunt Car Racer
Fighter Bomber
Pro Tennis Tour
Kick Off
Super Ski
Addicted to Fun collection includes:
New Zealand Story
Rainbow Islands
Bubble Bobble
Wheels of Fire collection includes:
Turbo Outrun
Chase HQ
Hard Drivin'
Power Drift
Light Force collection includes:
IK+
Bio Challenge
Voyager
R-Type

Thanks,
Daniel Koppen
dmk@air16.larc.nasa.gov

Hi there in Germany!

I have the following collection for sale:

- MegaSTe 4/48
- TOS 2.06 (and 2.05 in a box)
- Hard&Soft Vantage III SCSI-Controller (up to 8 devices)
- RSVE (115200Baud on MODEM1)
- HD-discdrive inside
- External DD-Discdrive
- SM124

Make an offer.

Games:
F19 Stealth Fighter (Microprose) 40.-DM
Night Shift (Lucasfilm Games) 30.-DM
Starglider II (Rainbird) 20.-DM

Bye
Stefan

3256. A LETTER TO BOB BRODIE

Newsgroup: comp.sys.atari.st
Date: 1993-12-09 17:24:37 UTC
From: jpoling@magnus.acs.ohio-state.edu
Message-ID: <2e7n0l$ekj@charm.magnus.acs.ohio-state.edu>
Source record: 197076

<BOB-BRODIE> We've talked about it a lot, Kim. We're longtime
partners with Motorola, and now with IBM, the Power PC becomes very
tempting. However, the Jag chipset is VERY appealing, too. At this
point, we haven't decided. ga

Dear Mr. Brodie:

I find the above quote as rather distressing news.

Let's face it. DOS boxes rule the world and Macs are close behind.

Unless the Jaguar chipset can run DOS and Mac software as fast,
completely, easily and cheaply as (I assume) the PowerPC then Atari will
be, once again, making a HUGE mistake. Perhaps their last.

With the DOS mindset of American consumers, I find it highly unlikely
that anybody will be willing to buy an Atari unless it is fully DOS
compatible in addition to running TOS.

Plus, Atari can probably get a sweetheart deal from IBM right now. IBM
has been losing big bucks for years. I had the fortune of speaking to
an IBM executive and learned that 1) they consider their Atari contract
to be a BIG contract and 2) they intend to, quote, "CRUSH Intel with the
PowerPC."

At the very least, IBM could take their own PowerPC machine, slap a
couple of MIDI ports and a DSP in it, and put the Atari name on it.
They would immediately have the music market sewn up, making making
money for BOTH companies.

Even if the Jaguar chipset is more powerful than the PowerPC, it CANNOT
make up for the name recognition that IBM has for computers. The "Atari
SuperPOWER with the IBM PowerPC" would be an advertising phrase that
would pique many a user.

Don't get left at the pier. There won't be another boat.

Regards and hope,

Jeff Poling

IF they work!?! Boy! <grin> I'm going to stick with Uniterm for awhile as
well, but for different reasons. IMHO, if one is not running MultiTOS/MINT,
the importance of everything being in a GEM window goes way down. With that
restriction gone, Uniterm's large textual TOS interface is easier for me to
look at for long periods of time. Now, if Unix-Windows (or some other
windowed serial multiplexing protocol) is incorporated into Connect, I'll
register the next day. I use Unix Windows for the ST when I really need
more than one window, but it is too pokey for general use.

> I have owned my ST since they first came out and have been satisfied with

> or Portland, or maybe even as far away as San Jose. Not a great situation for
> any computer owner.

I guess I was primed for this due to my years overseas on USAF bases. I
do everything via mail order, and have had very few problems. In fact, I
usually prefer it, as the prices are better. There are a handful of good
Atari mail order dealers that have served all of my needs.

Perhaps my biggest help (WRT mail order): Current Notes magazine. I have
been a long time subscriber, and feel that this magazine (in conjunction with
c.s.a.st and atari.archive.umich.edu) has made my purchase of an ST something
other than an expensive mistake. In addition to ads from mail order dealers,
the magazine offers articles, reviews, and a great PD library. Feel free
to email if you would like more information about Current Notes (I am not
involved with CN in any way, except as a satisfied customer).

As for being a dead issue, I feel that this has been the case for awhile, in
some sense. It appears obvious to me that Atari will probably never be
a major player in the computer market, due mostly to gross marketing
incompetence. However, they do make neat machines, and there are plenty
of folks that enjoy them. To be honest, there are some aspects of the
"smallness" of the ST market/user-base that I like. It is a bit "closer"

(let's not get gooey here :-), and certainly less impersonal than many aspects of the PC or Mac scene. When something cool comes out, everybody hears about it pretty quickly. There are some real characters in the ST scene (Jeff Minter comes to mind, and there are lots more). There are certainly many bad aspects to this "smallness", but "the grass is always greener..." phenomena is also at work (IMHO).

Note that I do my "real work" on various UNIX boxes, so my home machine is a "fun machine" for the most part. Others who _have_ to do serious work on their home machines are in a completely different situation.

> This is too bad because if the situation doesn't change,
> I'm seriously thinking of going to Pentium or one of the newer MAC's... any
> thoughts on this?

My situation is perhaps different, as my demands for a home machine are relatively modest. Priority one is kick ass terminal emulation/downloading capability (Uniterm, Connect, GRZSZ). Priority two is fun stuff (demos, games, etc.). Anything else is frosting for me. In fact, I have lots of very capable packages for the ST that go far beyond my priorities listed above, so I feel that my ST purchase was a great deal. Pagestream comes to mind, as does Neodesk and TempusII.

One thing that really extended my capabilities is the purchase of a Spectre 128 (perhaps soon to be a GCR). The ability to use Mac software (both commercial and share/freeware) really opens a lot of doors. Spectre's are cheap (they are often sold in this newsgroup for under $200 w/ROMs).

Of course, my other answer is: get some more computers. Having multiple systems is real nice. Heck, I am getting ready to set up my old Atari 800 in the living room just for games (and the original Colorspace, excellent!). This might be particular to me, but I have yet to sell an "old" computer when I lust after a new one, primarily because they seem to be worth so little. I can't see trashing capabilities that took me years to develop and organize just to knock a couple hundred bucks from a several thousand dollar purchase. It just does not seem to be good economics. Now, getting rid of old equipment when you _upgrade_ a system (thus preserving the ability to use stuff from the older system) makes sense to me, because the old system becomes dead weight, to a degree. Your mileage may vary.

>I'd like a Falcon and lots of RAM / STORAGE, but how's a guy
> supposed to get a chance to see it in action if he has to spend several hundred
> dollars for the plane ticket to his nearest dealer! (I'm being entirely serious
> here)...

Hmmm, perhaps a demo video? I have no idea if such a thing exists, but it may be worth a call to Atari, or even Toad Computers (this sounds like something they would get into). I am not a Falcon owner myself, but from what I have read it should be simple to videotape its output to a TV.

Everything above is IMHO. Direct flames elsewhere.

>old pick it up an inch and drop it onto the table trick.

I thought this was the case, and tried it. The problem disappeared for a while, but returned in a few days. Repeated Atari-dropping does not seem like the kind of solution I'm after.

In any event, I'm not sure loose SIMMs are the problem. My dealer left it in his shop running continuously for several days and nothing happened. Diagnostics software revealed nothing. And still the STe keeps crashing, though now I've disabled the G+PLUS and WARP 9 accessories and it's been tranquil so far (what are the latest versions of these programs, and can I find the upgrades on ftp?)

Appreciate the help, though.

That's funny. Everybody gets the default CPX-modules...
But, in case you really don't have it, get general.cpx, the
'general setup' CPX. With this one, you can select the clock speed,
and the cache setting.
You can find it on a.a.u.e and its mirrors. If you don't have Ftp-
access, I can email it to you...

>for a big, nation-wide rollout in time for Christmas. <sigh>

Oh, come on. This is, after all, an "initial test market". Atari's only
trying to sell 30,000 Jaguars in the USA this year (20,000 in Europe). Wait
until the "one million units in '94" effort gets underway, at least.

You also underestimate the power of good buzz in the gaming magazines. So
far, only ELECTRONIC GAMING MONTHLY is down on the machine; the others are at
least cordial, if not downright enthusiastic (the December DIE HARD GAME FAN
has named CYBERMORPH "game of the month", I hear). And besides, Atari _is_
advertising. That in itself is already an improvement over the past.

Well, you can have a ZIP file located on a minix partition, and use ST ZIP
to write it to a TOS partition. But you're right, try unzipping a file *to*
a minix partition and you'll get a few "cannot write" errors...

Yes, Atari Explorer is dead. Kaput. Fini. Long live AEO (AE Online).

I was told (by an un-named offical at Atari) that Atari does not intend
to issue refunds to those that paid for subscriptions, even though they
know or could find out who most of these people are. In other words, if
you want a refund, it will be up to you to ask and/or fight for it. I
suppose making a public stink is the only way to get action. Ludricous.

I don't like it either.

Why hasn't some brave soul looked into getting the Columbia Appletalk
Package (CAP) running over the LAN port on a TT/Mega STe/etc ? (I've asked
this question every 6 months or so for the past 2 years and have yet
heard anything....).

[Look over in Comp.protocols.appletalk for detailed info on CAP.]
CAP is a software suite that allows unix boxes to talk to Appletalk
devices on a network.

I suspect the Portfolio failed because it is not competitive with such palmtops as the Psion and HP 95-100lx. I have an HP 100lx and although it cost considerably more than the Portfolio it is well worth it - true CGA resolution and DOS 5 in a palmtop!

I've been wondering about that advertising bit - people always claim Atari
don't advertise. I've seen planty of ads for the Lynx regularly since it's
introduction. Where? In comics - mostly DC (which are owned by Time-Warner),
but also in Marvels. Don't you guys read comics anymore? :)

Hi!

I thought that all you people out there had just given up on the idea, so I let it ride for a while, and I recieved the princely amount of one (1) reply!!

Well, let's start with the BASICS (not the language ;^)).

A few of us decided that it was a pain in the butt trying to find X software package, with X.XX revision, etc. There are many FTP sites out there, and it takes ages to search through them all, even with an archie search. So what was proposed is that we create a database, similar to the FISH (File Index S... H...) things that the LINUX group has. Basically what the DataBase will have is a list of all the Atari programs / files / related stuff, where it can be had, what it's latest revision is, etc. What you as net users are asked to do it to fill in entries, send them to me, and I will enter tham into the DataBase.
Now, at the moment I am doing the Snapper on Atari Works, mainly because I don't have any better DataBases at the moment (DataManager is a dog ;*)), and also it has the ability to export comma-delimited files, so anyone can use the DataBase, even as a text file.

Well, I hope that answers a few questions, I will post another revision on Monday, I hope that all you avid Atari supporters will support this too, as I feel alone in the void ......

E-Mail me if you have ANY Questions ....

Best Regards,

Karl Meyland.

Not in this plane of existance.

There were some rumours of a Falcon040 around the time the Falcon030 was announced (ie, months before it was actually available)... several engineers appeared somewhere with "Atari Falcon040 development" on their resum\'es.

Even if Atari _did_ bring it to market, they'd never sell enough... you need advertising and dealers to make money.

IMHO, Atari will never release another computer. I'd love to be proven wrong (or to be given a Medusa!).

)for a big, nation-wide rollout in time for Christmas. <sigh>

No, they have missed nothing - sure it would have been nice toget a
large roolout this cristmas, but it will not affect the Jaguar's sales
much, as other competeing systems (3DO, CD-32) won't be out in force
till after christmas. After christmas is when they need to
start moving, and strike up a good national advertising campain.

3274. zx81 & spectrum emulators: is source available?

Newsgroup: comp.sys.atari.st
Date: 1993-12-09 23:51:35 UTC
From: zafiris@rtsg.mot.com
Message-ID: <zafiris.755481095@navy16>
Source record: 197098
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I recall mention of the existance of a Sinclair ZX81 (Timex/Sinclair in the states) simulator/emulator for the Atari ST. I also seem to recall that the same author had a Sinclair Spectrum (sp?) emulator also for the ST.

My impression is that both of these things came out of Germany at one time and that there were some legal difficulties in distributing them because of the copyrighted ROMs but that the emulators themselves were in the public domain.

I am interested in the Z80 emulator function itself: the CPU emulator not necessarily the ZX81 system emulator. I'd like to get a copy of the source code for these things if they exist. I presume they are written in either 68000 assembler or C.

Also, I would expect that there are also other such programs that do Z80 emulation for TRS80s or CPM that would also have to be based on a Z80 core. I'd be interested in hearing about them also.

I'd also heard of CPM emulators for PCs and I suppose they would also be useful if they were written in C so as to be portable to a 68000 but my guess would be that they take advantage of the similar 80x86 architecture and are hence written in 80x86 assembler.

So... if you know where I can get my hands on some source code for a Z80 simulator/emulator like those I described above please email me.

thanks... ...John

I must admit to seeing Lynx ads (great ones) on MTV,
in gaming magazines, and promotional stuff in electronics
stores. I didn't think Lynx ads were that rare. I'm hoping
that the reason the Lynx didn't succeed is that it didn't
have a console to back it up or that the handheld market
was just too small to justify Atari's continuing funding
of ads until the Jag was released. Also, more 3rd party
support would have helped greatly.

sorry if I wasn't clear, I'm not talking about piracy. I'm talking about
software quality, usefulness and consumer response. If people could
treat the purchase of software like *any* other consumer good, I
believe that there would be a significant drop in purchases not because
of theft but because consumers would say "this package is *crap*. I want
my money back".

buggy software is not the only reason I want to return software. many
times, I've bought sw, got it home and then decided that it really didn't
do what I need. I'm stuck. I've tried selling used sw but at best, you
get about 0.50$ on the dollar if you keep your mouth shut. Me, I
never learn, I tell the buyer what I found lacking and I get maybe 0.05$
on the dollar if that.

>If you want to help remedy the situation, then start by refusing to ever make

It's this attitude and others like it that have left the Atari market in the state it is in today. Wether you can rationalize your piracy or not, it is against the law. There is very little incentive for someone to buy a product once he has a fully working version in his hands. If you care about the future of your machine at all, you'll stop advocating the single most destructive force in the Atari community.

still? we just got onto it. Heh. Actually nobody has one yet, 'Cause they're
not out yet. But then again if you really want an 040 there are always the
medusa systems and, I suppose you could always customize the falcon or even
the ST to have an 040. So, there are atari "systems" (so to speak) that are
using 040's, but no falcons yet. Atari is concentrating on the Jaguar at
the moment, and after they get some money from that, they will hopefully
put some into future computer development. Then the 040 (and rumored
PowerPC?) are slated to come out..

-Don't quote me on that though. One can never say for sure... <grin>

C novice needs to know how he can get started on the ST (software, manuals, etc.). What's availiable? How can I get it?
Damn, it's hard being an STe enthusiast in the 'States....

3291. Notator Logic questions

Does anybody have a fax number for customer support? I think it might go quicker than the phones...

How can I get the "Bars per Line" feature of Notator SL? How about numbering measures in the printout, and printing the track names above the staff like SL did?

How can I speed this damn thing up on a 1040STe? This program was obviously not intended to run on an 8 mhz machine with a SM124 monitor!

So far, there are a few features that are really cool, like working within a printed page rather than the horizontal way SL did it, but for the most part, this program has a really really long way to go before I will feel comfortable with it.

Also, I seem to have run into a bug with the HP deskjet 300dpi driver. It doesn't print the note heads on most of the notes! It works fine in 150 dpi, and frankly, takes so long in that mode, that I would probably never use 300 dpi, but come on folks...it's a $700 program...I think we need to work out some of these bugs pretty quickly!

Finally, I just couldn't get the program to notate a triplet 8th note figure. I tried dragging it on, and in all sorts of different quantizations, and no go.

All in all, I'm very frustrated with that $299 upgrade fee for something that I really can't use yet.

] TOS 1.06 equipped 1040 STEs won't boot in medium resolution, they always
] come up in low rez, no matter what rez it was in when "Save Desktop" was
] invoked.

Unless the '12' or '02' (the 1 denotes an active blitter), is changed
to a '13' or '03' on the #E line (5th line) in the DESKTOP.INF file.

So, whereas:/

#E D8 12
and
#E D8 11

Will both boot in Low res' (With the 11 being meant to do so).

#E D8 13

Will boot in Medium Resolution, or High/Monochrome Resolution if available.

The STE seems to take the next best guess when it encounters the 13.

(All of the above are with Blitter on, as turning it off produces:

01
02
03

Being Low, Medium and High res' respectively!)

This procedure of editing the DESKTOP.INF is only useful from floppy
if you want a decent boot time, otherwise, using STE-Fix is the best
bet, as it fixes the problem. The bug *can* actually be useful if
